- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationprotecteduseraction":{

<b>"name":<String_value>,

</b><b>"realmstr":<String_value>,

</b>"maxconcurrentusers":<Integer_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction/ name_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationprotecteduseraction":{

<b>"name":<String_value>,

</b>"realmstr":<String_value>,

"maxconcurrentusers":<Integer_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction?**action=unset HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationprotecteduseraction":{

<b>"name":<String_value>,

</b>"maxconcurrentusers":true

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationprotecteduseraction? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of authenticationprotecteduseraction resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction? **view=summary**

Use this query-parameter to get the summary output of authenticationprotecteduseraction resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationprotecteduseraction resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationprotecteduseraction": [ {

"name":<String_value>,

"realmstr":<String_value>,

"maxconcurrentusers":<Integer_value>,

"_nextgenapiresource":<String_value>

}]}
```

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction/ name_value<String> **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationprotecteduseraction/ name_value<String> ? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

view http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction/ name_value<String> ? **view=summary**

Use this query-parameter to get the summary output of authenticationprotecteduseraction resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationprotecteduseraction": [ {

"name":<String_value>,

"realmstr":<String_value>,

"maxconcurrentusers":<Integer_value>,

"_nextgenapiresource":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationprotecteduseraction? **count=yes**
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationprotecteduseraction": [ { "__count": "#no"} ] }
```

authenticationpushservice

Configuration for Service details for sending push notifications resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the push service. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Cannot be changed after the profile is created. CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my push service" or 'my push service'). . Minimum length = 1 Maximum length = 127
clientid	<String>	Read-write	Unique identity for communicating with

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Citrix Push server in cloud. Minimum length = 1
clientsecret	<String>	Read-write	Unique secret for communicating with Citrix Push server in cloud. Minimum length = 1
customerid	<String>	Read-write	Customer id/name of the account in cloud that is used to create clientid/secret pair. Minimum length = 1
refreshinterval	<Integer>	Read-write	Interval at which certificates or idtoken is refreshed. Default value: 50
Namespace	<String>	Read-only	This is fully qualified domain name of the notification service in the cloud. If omitted, namespace defaults to https://mfa.cloud.com/. Minimum length = 1 Maximum length = 63
hubname	<String>	Read-only	Name of the hub within a namespace. This is used to classify different identities within a namespace. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicekey	<String>	Read-only	Key to be used to compute signature necessary for registering to notification service. Minimum length = 1
servicekeyname	<String>	Read-only	Friendly name of the Key to be used to compute signature necessary for registering to notification service. Minimum length = 1
certendpoint	<String>	Read-only	URL of the endpoint that contains JWKs (Json Web Key) for JWT (Json Web Token) verification. This is used at cloud instance that offers push service.
pushservicestatus	<String>	Read-only	Describes status of push service. Default value: INIT Possible values = INIT, CERTFETCH, CCTOKEN, COMPLETE
trustservice	<String>	Read-only	URL of the service that generates tokens for cloud access. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pushcloudserverstatus	<String>	Read-only	Describes status of the cloud service that does push. Possible values = UP, DOWN
signingkeyname	<String>	Read-only	Friendly name of the Key to be used to compute signature necessary for accessing notification service. Minimum length = 1
signingkey	<String>	Read-only	Key to be used to compute signature necessary for accessing notification service. Minimum length = 1
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Response Payload:

```
{ "authenticationpushservice": [ { "__count": "#no"} ] }
```

authenticationradiusaction

Configuration for RADIUS action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the RADIUS action. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after the RADIUS action is added. Minimum length = 1
serverip	<String>	Read-write	IP address assigned to the RADIUS server. Minimum length = 1
servername	<String>	Read-write	RADIUS server name as a FQDN. Mutually exclusive

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			with RADIUS IP address. Minimum length = 1
serverport	<Integer>	Read-write	Port number on which the RADIUS server listens for connections. Minimum value = 1
authtimeout	<Integer>	Read-write	Number of seconds the Citrix ADC waits for a response from the RADIUS server. Default value: 3 Minimum value = 1
radkey	<String>	Read-write	Key shared between the RADIUS server and the Citrix ADC. Required to allow the Citrix ADC to communicate with the RADIUS server. Minimum length = 1
radnasip	<String>	Read-write	If enabled, the Citrix ADC IP address (NSIP) is sent to the RADIUS server as the Network Access Server IP (NASIP) address. The RADIUS protocol defines the meaning and use of the NASIP address.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ENABLED, DISABLED
radnasid	<String>	Read-write	If configured, this string is sent to the RADIUS server as the Network Access Server ID (NASID).
radvendorid	<Integer>	Read-write	RADIUS vendor ID attribute, used for RADIUS group extraction. Minimum value = 1
radattributetype	<Integer>	Read-write	RADIUS attribute type, used for RADIUS group extraction. Minimum value = 1
radgroupsprefix	<String>	Read-write	RADIUS groups prefix string. This groups prefix precedes the group names within a RADIUS attribute for RADIUS group extraction.
radgroupseparator	<String>	Read-write	RADIUS group separator string The group separator delimits group names within a RADIUS attribute for RADIUS group extraction.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
passencoding	<String>	Read-write	Encoding type for passwords in RADIUS packets that the Citrix ADC sends to the RADIUS server. Default value: pap Possible values = pap, chap, mschapv1, mschapv2
ipvendorid	<Integer>	Read-write	Vendor ID of the intranet IP attribute in the RADIUS response. NOTE: A value of 0 indicates that the attribute is not vendor encoded.
ipattributetype	<Integer>	Read-write	Remote IP address attribute type in a RADIUS response. Minimum value = 1
accounting	<String>	Read-write	Whether the RADIUS server is currently accepting accounting messages. Possible values = ON, OFF
pwdvendorid	<Integer>	Read-write	Vendor ID of the attribute, in the RADIUS response,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			used to extract the user password. Minimum value = 1
pwdattributetype	<Integer>	Read-write	Vendor-specific password attribute type in a RADIUS response. Minimum value = 1
defaultauthentication group	<String>	Read-write	This is the default group that is chosen when the authentication succeeds in addition to extracted groups.
callingstationid	<String>	Read-write	Send Calling-Station-ID of the client to the RADIUS server. IP Address of the client is sent as its Calling-Station-ID. Default value: DISABLED Possible values = ENABLED, DISABLED
authservretry	<Integer>	Read-write	Number of retry by the Citrix ADC before getting response from the RADIUS server. Default value: 3 Minimum value = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 10
authentication	<String>	Read-write	Configure the RADIUS server state to accept or refuse authentication messages. Default value: ON Possible values = ON, OFF
tunnelendpointclientip	<String>	Read-write	Send Tunnel Endpoint Client IP address to the RADIUS server. Default value: DISABLED Possible values = ENABLED, DISABLED
transport	<String>	Read-write	Transport mode to RADIUS server. Default value: RAD_TRANSPORT_UDP Possible values = UDP, TCP, TLS
targetlbvserver	<String>	Read-write	If transport mode is TLS, specify the name of LB vserver to associate. The LB vserver needs to be of type TCP and service associated

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			needs to be SSL_TCP.
messageauthenticator	<String>	Read-write	Control whether the Message-Authenticator attribute is included in a RADIUS Access-Request packet. Default value: ON Possible values = ON, OFF
ipaddress	<String>	Read-only	IP address.
success	<Integer>	Read-only	.
failure	<Integer>	Read-only	.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

```

authenticationradiuspolicy

Configuration for RADIUS policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the RADIUS authentication policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after RADIUS policy is created. The following requirement applies only to the Citrix ADC CLI:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my authentication policy" or 'my authentication policy'). Minimum length = 1
rule	<String>	Read-write	Name of the Citrix ADC named rule, or an expression, that the policy uses to determine whether to attempt to authenticate the user with the RADIUS server.
reqaction	<String>	Read-write	Name of the RADIUS action to perform if the policy matches. Minimum length = 1
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE

- UNSET
- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationradiuspolicy":{

<b>"name":<String_value>,

</b><b>"rule":<String_value>,

</b>"reqaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy/ name_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationradiuspolicy":{

<b>"name":<String_value>,

</b>"rule":<String_value>,

"reqaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy? **action=unset**
HTTP Method: POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationradiuspolicy":{

<b>"name":<String_value>,

</b>"rule":true,

"reqaction":true

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of authenticationradiuspolicy resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy? **view=summary**

Use this query-parameter to get the summary output of authenticationradiuspolicy resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationradiuspolicy resources in chunks.

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy_vpnglobal_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationradiuspolicy_vpnglobal_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of authenticationradiuspolicy_vpnglobal_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ authenticationradiuspolicy_vpnglobal_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationradiuspolicy_vpnglobal_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationradiuspolicy_vpnglobal_binding": [ {

"boundto":<String_value>,

"name":<String_value>,

"activepolicy":<Integer_value>,

"priority":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy_vpnglobal_binding
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy_vpnglobal_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationradiuspolicy_vpnglobal_binding": [ {

"boundto":<String_value>,

"name":<String_value>,

"activepolicy":<Integer_value>,

"priority":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy_vpnglobal_binding/name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"authenticationradiuspolicy_vpnglobal_binding": [ { "__count": "#no"} ] }
```

authenticationradiuspolicy_vpnvserver_binding

Binding object showing the vpnvserver that can be bound to authenticationradiuspolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	The entity name to which policy is bound.
name	<String>	Read-write	Name of the RADIUS authentication policy. Minimum length = 1
activepolicy	<Integer>	Read-only	.
priority	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationradiuspolicy_vpnvserver_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationradiuspolicy_vpnvserver_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of authenticationradiuspolicy_vpnvserver_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ authenticationradiuspolicy_vpnvserver_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationradiuspolicy_vpnvserver_binding resources in chunks.

authenticationsamlaction

Configuration for AAA Saml action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the SAML server profile (action). Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after SAML profile is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my authentication action" or 'my

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			authentication action'). Minimum length = 1
metadataurl	<String>	Read-write	This URL is used for obtaining saml metadata. Note that it fills samlIdPCertName and samlredirectUrl fields so those fields should not be updated when metadataUrl present.
samlidpcertname	<String>	Read-write	Name of the SSL certificate used to verify responses from SAML Identity Provider (IdP). Note that if metadateURL is present then this filed should be empty. Minimum length = 1
samlsigningcertname	<String>	Read-write	Name of the SSL certificate to sign requests from ServiceProvider (SP) to Identity Provider (IdP). Minimum length = 1
samlredirecturl	<String>	Read-write	URL to which users are redirected for authentication. Note that if metadateURL is present then this

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			filed should be empty. Minimum length = 1
samlacsindex	<Integer>	Read-write	Index/ID of the metadata entry corresponding to this configuration. Default value: 255 Minimum value = 0 Maximum value = 255
samluserfield	<String>	Read-write	SAML user ID, as given in the SAML assertion. Minimum length = 1
samlrejectunsignedassertion	<String>	Read-write	Reject unsigned SAML assertions. ON option results in rejection of Assertion that is received without signature. STRICT option ensures that both Response and Assertion are signed. Default value: ON Possible values = ON, STRICT
samlissuername	<String>	Read-write	The name to be used in requests sent from Citrix ADC to IdP to uniquely identify Citrix ADC. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
samltwofactor	<String>	Read-write	Option to enable second factor after SAML. Default value: OFF Possible values = ON, OFF
preferredbindtype	<String[]>	Read-write	This element specifies the preferred binding types for sso and logout for metadata configuration. . Possible values = SSOREDIRECT, LOGOUTPOST
defaultauthentication group	<String>	Read-write	This is the default group that is chosen when the authentication succeeds in addition to extracted groups.
attribute1	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute1. Maximum length of the extracted attribute is 239 bytes.
attribute2	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute2. Maximum length of

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the extracted attribute is 239 bytes.
attribute3	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute3. Maximum length of the extracted attribute is 239 bytes.
attribute4	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute4. Maximum length of the extracted attribute is 239 bytes.
attribute5	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute5. Maximum length of the extracted attribute is 239 bytes.
attribute6	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute6. Maximum length of the extracted

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			attribute is 239 bytes.
attribute7	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute7. Maximum length of the extracted attribute is 239 bytes.
attribute8	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute8. Maximum length of the extracted attribute is 239 bytes.
attribute9	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute9. Maximum length of the extracted attribute is 239 bytes.
attribute10	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute10. Maximum length of the extracted

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			attribute is 239 bytes.
attribute11	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute11. Maximum length of the extracted attribute is 239 bytes.
attribute12	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute12. Maximum length of the extracted attribute is 239 bytes.
attribute13	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute13. Maximum length of the extracted attribute is 239 bytes.
attribute14	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute14. Maximum length of the extracted

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			attribute is 239 bytes.
attribute15	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute15. Maximum length of the extracted attribute is 239 bytes.
attribute16	<String>	Read-write	Name of the attribute in SAML Assertion whose value needs to be extracted and stored as attribute16. Maximum length of the extracted attribute is 239 bytes.
attributes	<String>	Read-write	List of attribute names separated by ',' which needs to be extracted. Note that preceeding and trailing spaces will be removed. Attribute name can be 127 bytes and total length of this string should not cross 2047 bytes. These attributes have multi-value

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			support separated by ',' and stored as key-value pair in AAA session.
relaystaterule	<String>	Read-write	Boolean expression that will be evaluated to validate the SAML Response. Examples: set authentication samlaction <actionname> -relaystateRule 'AAA.LOGIN.RELAYSTATE.EQ("https://fqdn.com/")' set authentication samlaction <actionname> -relaystateRule 'AAA.LOGIN.RELAYSTATE.CONTAINS("https://fqdn.com/")' set authentication samlaction <actionname> -relaystateRule 'AAA.LOGIN.RELAYSTATE.CONTAINS_ANY("patset_name")'

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			set authentication samlAction samlsp -relaystateRule 'AAA.LOGIN.RELAYSTATE.REGEX_MATCH(re#http://<regex>.com/#)'. Maximum length = 8192
signaturealg	<String>	Read-write	Algorithm to be used to sign/verify SAML transactions. Default value: RSA-SHA256 Possible values = RSA-SHA1, RSA-SHA256
digestmethod	<String>	Read-write	Algorithm to be used to compute/verify digest for SAML transactions. Default value: SHA256 Possible values = SHA1, SHA256
requestedauthncontext	<String>	Read-write	This element specifies the authentication context requirements of authentication statements returned in the response.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: exact Possible values = exact, minimum, maximum, better
authnctxclassref	<String[]>	Read-write	This element specifies the authentication class types that are requested from IdP (IdentityProvider). InternetProtocol: This is applicable when a principal is authenticated through the use of a provided IP address. InternetProtocolPassword: This is applicable when a principal is authenticated through the use of a provided IP address, in addition to a username/ password. Kerberos: This is applicable when the principal has authenticated using a password to a local authentication authority, in order to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			acquire a Kerberos ticket. MobileOneFactorUnregistered: This indicates authentication of the mobile device without requiring explicit end-user interaction. MobileTwoFactorUnregistered: This indicates two-factor based authentication during mobile customer registration process, such as secure device and user PIN. MobileOneFactorContract: Reflects mobile contract customer registration procedures and a single factor authentication. MobileTwoFactorContract: Reflects mobile contract customer

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			registration procedures and a two-factor based authentication. Password: This class is applicable when a principal authenticates using password over unprotected http session. PasswordProtected Transport: This class is applicable when a principal authenticates to an authentication authority through the presentation of a password over a protected session. PreviousSession: This class is applicable when a principal had authenticated to an authentication authority at some point in the past using any authentication context.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			X509: This indicates that the principal authenticated by means of a digital signature where the key was validated as part of an X.509 Public Key Infrastructure. PGP: This indicates that the principal authenticated by means of a digital signature where the key was validated as part of a PGP Public Key Infrastructure. SPKI: This indicates that the principal authenticated by means of a digital signature where the key was validated via an SPKI Infrastructure. XMLDSig: This indicates that the principal authenticated by means of a digital signature according to the processing rules specified in

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the XML Digital Signature specification. Smartcard: This indicates that the principal has authenticated using smartcard. SmartcardPKI: This class is applicable when a principal authenticates to an authentication authority through a two-factor authentication mechanism using a smartcard with enclosed private key and a PIN. SoftwarePKI: This class is applicable when a principal uses an X.509 certificate stored in software to authenticate to the authentication authority. Telephony: This class is used to indicate that the principal

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			authenticated via the provision of a fixed-line telephone number, transported via a telephony protocol such as ADSL. NomadTelephony: Indicates that the principal is "roaming" and authenticates via the means of the line number, a user suffix, and a password element. PersonalTelephony: This class is used to indicate that the principal authenticated via the provision of a fixed-line telephone. AuthenticatedTelephony: Indicates that the principal authenticated via the means of the line number, a user suffix, and a password element.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			SecureRemotePassword: This class is applicable when the authentication was performed by means of Secure Remote Password. TLSClient: This class indicates that the principal authenticated by means of a client certificate, secured with the SSL/TLS transport. TimeSyncToken: This is applicable when a principal authenticates through a time synchronization token. Unspecified: This indicates that the authentication was performed by unspecified means. Windows: This indicates that Windows integrated authentication is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			utilized for authentication. Possible values = InternetProtocol, InternetProtocolPassword, Kerberos, MobileOneFactorUnregistered, MobileTwoFactorUnregistered, MobileOneFactorContract, MobileTwoFactorContract, Password, PasswordProtectedTransport, PreviousSession, X509, PGP, SPKI, XMLDSig, Smartcard, SmartcardPKI, SoftwarePKI, Telephony, NomadTelephony, PersonalTelephony, AuthenticatedTelephony, SecureRemotePassword, TLSClient, TimeSyncToken, Unspecified, Windows
customauthnctxclassref	<String>	Read-write	This element specifies the custom authentication class

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			reference to be sent as a part of the Authentication Request that is sent by the SP to SAML IDP. The input string must be the body of the authentication class being requested. Input format: Alphanumeric string or URL specifying the body of the Request.If more than one string has to be provided, then the same can be done by specifying the classes as a string of comma separated values. Example input: set authentication samlaction samlact1 -customAuthnCtxClassRef http://www.class1.com/LoA1,http://www.class2.com/LoA2 . Maximum length = 512

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
samlbinding	<String>	Read-write	This element specifies the transport mechanism of saml messages. Default value: POST Possible values = REDIRECT, POST, ARTIFACT
attributeconsumingserviceindex	<Integer>	Read-write	Index/ID of the attribute specification at Identity Provider (IdP). IdP will locate attributes requested by SP using this index and send those attributes in Assertion. Default value: 255 Minimum value = 0 Maximum value = 255
sendthumbprint	<String>	Read-write	Option to send thumbprint instead of x509 certificate in SAML request. Default value: OFF Possible values = ON, OFF
enforceusername	<String>	Read-write	Option to choose whether the username that is extracted from SAML assertion can be

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			edited in login page while doing second factor. Default value: ON Possible values = ON, OFF
logouturl	<String>	Read-write	SingleLogout URL on IdP to which logoutRequest will be sent on Citrix ADC session cleanup.
artifactresolutionservi ceurl	<String>	Read-write	URL of the Artifact Resolution Service on IdP to which Citrix ADC will post artifact to get actual SAML token.
skewtime	<Integer>	Read-write	This option specifies the allowed clock skew in number of minutes that Citrix ADC ServiceProvider allows on an incoming assertion. For example, if skewTime is 10, then assertion would be valid from (current time - 10) min to (current time + 10) min, ie 20min in all. Default value: 5
logoutbinding	<String>	Read-write	This element specifies the transport mechanism

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			of saml logout messages. Default value: POST Possible values = REDIRECT, POST
forceauthn	<String>	Read-write	Option that forces authentication at the Identity Provider (IdP) that receives Citrix ADC's request. Default value: OFF Possible values = ON, OFF
groupnamefield	<String>	Read-write	Name of the tag in assertion that contains user groups.
audience	<String>	Read-write	Audience for which assertion sent by IdP is applicable. This is typically entity name or url that represents ServiceProvider.
metadatarefreshinterval	<Integer>	Read-write	Interval in minutes for fetching metadata from specified metadata URL. Default value: 3600
storesamlresponse	<String>	Read-write	Option to store entire SAML Response through the life of user session.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: OFF Possible values = ON, OFF
statechecks	<String>	Read-write	Boolean expression that will be evaluated to validate HTTP requests on SAML endpoints. Examples: set authentication samlaction <actionname> -stateChecks 'HTTP.REQ.HOSTNAME.EQ("https://fqdn.com/")' . Maximum length = 8191
metadataimportstatus	<String>	Read-only	Describes metadata import status. Default value: SUCCESS Possible values = INIT, SUCCESS, FAIL
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET
- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

authenticationsamlidppolicy

Configuration for AAA Saml IdentityProvider (IdP) policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the SAML Identity Provider (IdP) authentication policy. This is used for configuring Citrix ADC as SAML Identity Provider. Must begin with an

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after the policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my policy" or 'my policy'). Minimum length = 1
rule	<String>	Read-write	Expression which is evaluated to choose a profile for authentication. The following requirements apply only to the Citrix ADC CLI:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation marks, escape the quotations by using the \ character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks. Minimum length = 1
action	<String>	Read-write	Name of the profile to apply to requests or connections that match this policy. Minimum length = 1
undefaction	<String>	Read-write	Action to perform if the result of policy evaluation is undefined (UNDEF). An UNDEF event indicates an internal error condition. Only

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the above built-in actions can be used.
comment	<String>	Read-write	Any comments to preserve information about this policy.
logaction	<String>	Read-write	Name of messagelog action to use when a request matches this policy.
newname	<String>	Read-write	New name for the SAML IdentityProvider policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			marks (for example, "my samlidppolicy policy" or 'my samlidppolicy policy'). Minimum length = 1
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
hits	<Integer>	Read-only	Number of hits.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

- ADD
- DELETE
- UPDATE
- UNSET
- GET (ALL)
- GET
- COUNT
- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlidppolicy **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationsamlidppolicy":{

<b>"name":<String_value>,

</b><b>"rule":<String_value>,
```

```
</b><b>"action":<String_value>,

</b>"undefaction":<String_value>,

"comment":<String_value>,

"logaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlidppolicy/ name_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlidppolicy **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationsamlidppolicy":{

<b>"name":<String_value>,

</b>"rule":<String_value>,

"action":<String_value>,

"undefaction":<String_value>,

"comment":<String_value>,

"logaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlidppolicy? **action=unset**
HTTP Method: POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationsamlidppolicy":{

<b>"name":<String_value>,

</b>"undefaction":true,

"comment":true,

"logaction":true
```

```
}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

RENAME

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlidppolicy? **action=rename**
HTTP Method: POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationsamlidppolicy":{

<b>"name":<String_value>,

```

authenticationsamlidppolicy_vpnvserver_binding

Binding object showing the vpnvserver that can be bound to authenticationsamlidppolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	The entity name to which policy is bound.
name	<String>	Read-write	Name of the SAML IdentityProvider (IdP) policy for which to display detailed information. Minimum length = 1
activepolicy	<Integer>	Read-only	.
priority	<Integer>	Read-only	.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlidppolicy_vpnvserver_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlidppolicy_vpnvserver_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of authenticationsamlidppolicy_vpnvserver_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlidppolicy_vpnvserver_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationsamlidppolicy_vpnvserver_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationsamlidppolicy_vpnvserver_binding": [ {

"boundto":<String_value>,

"name":<String_value>,

"activepolicy":<Integer_value>,
```

```
"priority":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlidppolicy_vpnvserver_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlidppolicy_vpnvserver_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationsamlidppolicy_vpnvserver_binding": [ {

"boundto":<String_value>,

"name":<String_value>,

"activepolicy":<Integer_value>,

"priority":<Integer_value>
```

```
}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlidppolicy_vpnvserver_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"authenticationsamlidppolicy_vpnvserver_binding": [ { "__count":
"#no"} ] }
```

authenticationsamlidpprofile

Configuration for AAA Saml IdentityProvider (IdP) profile resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the new saml single sign-on profile. Must begin with an ASCII

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after an action is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my action" or 'my action'). Minimum length = 1
samlspcertname	<String>	Read-write	Name of the SSL certificate of SAML Relying Party. This certificate is used to verify signature of the incoming AuthnRequest from a Relying Party or Service Provider. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
samlidpcertname	<String>	Read-write	Name of the certificate used to sign the SAMLResposne that is sent to Relying Party or Service Provider after successful authentication. Minimum length = 1
assertionconsumerserviceurl	<String>	Read-write	URL to which the assertion is to be sent. Minimum length = 1
sendpassword	<String>	Read-write	Option to send password in assertion. Default value: OFF Possible values = ON, OFF
samlissuername	<String>	Read-write	The name to be used in requests sent from Citrix ADC to IdP to uniquely identify Citrix ADC. Minimum length = 1
rejectunsignedrequests	<String>	Read-write	Option to Reject unsigned SAML Requests. ON option denies any authentication requests that arrive without signature. Default value: ON

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ON, OFF
signaturealg	<String>	Read-write	Algorithm to be used to sign/verify SAML transactions. Default value: RSA-SHA256 Possible values = RSA-SHA1, RSA-SHA256
digestmethod	<String>	Read-write	Algorithm to be used to compute/verify digest for SAML transactions. Default value: SHA256 Possible values = SHA1, SHA256
audience	<String>	Read-write	Audience for which assertion sent by IdP is applicable. This is typically entity name or url that represents ServiceProvider.
nameidformat	<String>	Read-write	Format of Name Identifier sent in Assertion. Default value: transient Possible values = Unspecified, emailAddress, X509SubjectName,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			WindowsDomainQualifiedName, kerberos, entity, persistent, transient
nameidexpr	<String>	Read-write	Expression that will be evaluated to obtain NameIdentifier to be sent in assertion. Maximum length = 128
attribute1	<String>	Read-write	Name of attribute1 that needs to be sent in SAML Assertion.
attribute1expr	<String>	Read-write	Expression that will be evaluated to obtain attribute1's value to be sent in Assertion. Maximum length = 128
attribute1friendlyname	<String>	Read-write	User-Friendly Name of attribute1 that needs to be sent in SAML Assertion.
attribute1format	<String>	Read-write	Format of Attribute1 to be sent in Assertion. Possible values = URI, Basic
attribute2	<String>	Read-write	Name of attribute2 that needs to be sent in SAML Assertion.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute2expr	<String>	Read-write	Expression that will be evaluated to obtain attribute2's value to be sent in Assertion. Maximum length = 128
attribute2friendlyname	<String>	Read-write	User-Friendly Name of attribute2 that needs to be sent in SAML Assertion.
attribute2format	<String>	Read-write	Format of Attribute2 to be sent in Assertion. Possible values = URI, Basic
attribute3	<String>	Read-write	Name of attribute3 that needs to be sent in SAML Assertion.
attribute3expr	<String>	Read-write	Expression that will be evaluated to obtain attribute3's value to be sent in Assertion. Maximum length = 128
attribute3friendlyname	<String>	Read-write	User-Friendly Name of attribute3 that needs to be sent in SAML Assertion.
attribute3format	<String>	Read-write	Format of Attribute3 to be sent in Assertion.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = URI, Basic
attribute4	<String>	Read-write	Name of attribute4 that needs to be sent in SAML Assertion.
attribute4expr	<String>	Read-write	Expression that will be evaluated to obtain attribute4's value to be sent in Assertion. Maximum length = 128
attribute4friendlyname	<String>	Read-write	User-Friendly Name of attribute4 that needs to be sent in SAML Assertion.
attribute4format	<String>	Read-write	Format of Attribute4 to be sent in Assertion. Possible values = URI, Basic
attribute5	<String>	Read-write	Name of attribute5 that needs to be sent in SAML Assertion.
attribute5expr	<String>	Read-write	Expression that will be evaluated to obtain attribute5's value to be sent in Assertion. Maximum length = 128
attribute5friendlyname	<String>	Read-write	User-Friendly Name of attribute5 that

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			needs to be sent in SAML Assertion.
attribute5format	<String>	Read-write	Format of Attribute5 to be sent in Assertion. Possible values = URI, Basic
attribute6	<String>	Read-write	Name of attribute6 that needs to be sent in SAML Assertion.
attribute6expr	<String>	Read-write	Expression that will be evaluated to obtain attribute6's value to be sent in Assertion. Maximum length = 128
attribute6friendlyname	<String>	Read-write	User-Friendly Name of attribute6 that needs to be sent in SAML Assertion.
attribute6format	<String>	Read-write	Format of Attribute6 to be sent in Assertion. Possible values = URI, Basic
attribute7	<String>	Read-write	Name of attribute7 that needs to be sent in SAML Assertion.
attribute7expr	<String>	Read-write	Expression that will be evaluated to obtain attribute7's

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			value to be sent in Assertion. Maximum length = 128
attribute7friendlyname	<String>	Read-write	User-Friendly Name of attribute7 that needs to be sent in SAML Assertion.
attribute7format	<String>	Read-write	Format of Attribute7 to be sent in Assertion. Possible values = URI, Basic
attribute8	<String>	Read-write	Name of attribute8 that needs to be sent in SAML Assertion.
attribute8expr	<String>	Read-write	Expression that will be evaluated to obtain attribute8's value to be sent in Assertion. Maximum length = 128
attribute8friendlyname	<String>	Read-write	User-Friendly Name of attribute8 that needs to be sent in SAML Assertion.
attribute8format	<String>	Read-write	Format of Attribute8 to be sent in Assertion. Possible values = URI, Basic

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute9	<String>	Read-write	Name of attribute9 that needs to be sent in SAML Assertion.
attribute9expr	<String>	Read-write	Expression that will be evaluated to obtain attribute9's value to be sent in Assertion. Maximum length = 128
attribute9friendlyname	<String>	Read-write	User-Friendly Name of attribute9 that needs to be sent in SAML Assertion.
attribute9format	<String>	Read-write	Format of Attribute9 to be sent in Assertion. Possible values = URI, Basic
attribute10	<String>	Read-write	Name of attribute10 that needs to be sent in SAML Assertion.
attribute10expr	<String>	Read-write	Expression that will be evaluated to obtain attribute10's value to be sent in Assertion. Maximum length = 128
attribute10friendlyname	<String>	Read-write	User-Friendly Name of attribute10 that needs to be sent in SAML Assertion.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute10format	<String>	Read-write	Format of Attribute10 to be sent in Assertion. Possible values = URI, Basic
attribute11	<String>	Read-write	Name of attribute11 that needs to be sent in SAML Assertion.
attribute11expr	<String>	Read-write	Expression that will be evaluated to obtain attribute11's value to be sent in Assertion. Maximum length = 128
attribute11friendlyname	<String>	Read-write	User-Friendly Name of attribute11 that needs to be sent in SAML Assertion.
attribute11format	<String>	Read-write	Format of Attribute11 to be sent in Assertion. Possible values = URI, Basic
attribute12	<String>	Read-write	Name of attribute12 that needs to be sent in SAML Assertion.
attribute12expr	<String>	Read-write	Expression that will be evaluated to obtain attribute12's value to be sent in Assertion. Maximum length = 128

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute12friendlyname	<String>	Read-write	User-Friendly Name of attribute12 that needs to be sent in SAML Assertion.
attribute12format	<String>	Read-write	Format of Attribute12 to be sent in Assertion. Possible values = URI, Basic
attribute13	<String>	Read-write	Name of attribute13 that needs to be sent in SAML Assertion.
attribute13expr	<String>	Read-write	Expression that will be evaluated to obtain attribute13's value to be sent in Assertion. Maximum length = 128
attribute13friendlyname	<String>	Read-write	User-Friendly Name of attribute13 that needs to be sent in SAML Assertion.
attribute13format	<String>	Read-write	Format of Attribute13 to be sent in Assertion. Possible values = URI, Basic
attribute14	<String>	Read-write	Name of attribute14 that needs to be sent in SAML Assertion.
attribute14expr	<String>	Read-write	Expression that will be evaluated to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			obtain attribute14's value to be sent in Assertion. Maximum length = 128
attribute14friendlyname	<String>	Read-write	User-Friendly Name of attribute14 that needs to be sent in SAML Assertion.
attribute14format	<String>	Read-write	Format of Attribute14 to be sent in Assertion. Possible values = URI, Basic
attribute15	<String>	Read-write	Name of attribute15 that needs to be sent in SAML Assertion.
attribute15expr	<String>	Read-write	Expression that will be evaluated to obtain attribute15's value to be sent in Assertion. Maximum length = 128
attribute15friendlyname	<String>	Read-write	User-Friendly Name of attribute15 that needs to be sent in SAML Assertion.
attribute15format	<String>	Read-write	Format of Attribute15 to be sent in Assertion. Possible values = URI, Basic

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute16	<String>	Read-write	Name of attribute16 that needs to be sent in SAML Assertion.
attribute16expr	<String>	Read-write	Expression that will be evaluated to obtain attribute16's value to be sent in Assertion. Maximum length = 128
attribute16friendlyname	<String>	Read-write	User-Friendly Name of attribute16 that needs to be sent in SAML Assertion.
attribute16format	<String>	Read-write	Format of Attribute16 to be sent in Assertion. Possible values = URI, Basic
encryptassertion	<String>	Read-write	Option to encrypt assertion when Citrix ADC IDP sends one. Default value: OFF Possible values = ON, OFF
encryptionalgorithm	<String>	Read-write	Algorithm to be used to encrypt SAML assertion. Default value: AES256 Possible values = DES3, AES128, AES192, AES256

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
samlbinding	<String>	Read-write	This element specifies the transport mechanism of saml messages. Default value: POST Possible values = REDIRECT, POST, ARTIFACT
skewtime	<Integer>	Read-write	This option specifies the number of minutes on either side of current time that the assertion would be valid. For example, if skewTime is 10, then assertion would be valid from (current time - 10) min to (current time + 10) min, ie 20min in all. Default value: 5
serviceproviderid	<String>	Read-write	Unique identifier of the Service Provider that sends SAML Request. Citrix ADC will ensure that the Issuer of the SAML Request matches this URI. In case of SP initiated sign-in scenarios, this value must be same as samlIssuerName configured in samlAction.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1
signassertion	<String>	Read-write	Option to sign portions of assertion when Citrix ADC IDP sends one. Based on the user selection, either Assertion or Response or Both or none can be signed. Default value: ASSERTION Possible values = NONE, ASSERTION, RESPONSE, BOTH
keytransportalg	<String>	Read-write	Key transport algorithm to be used in encryption of SAML assertion. Default value: RSA_OAEP Possible values = RSA-V1_5, RSA_OAEP
splogouturl	<String>	Read-write	Endpoint on the ServiceProvider (SP) to which logout messages are to be sent. Minimum length = 1
logoutbinding	<String>	Read-write	This element specifies the transport mechanism

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			of saml logout messages. Default value: POST Possible values = REDIRECT, POST
defaultauthenticationgroup	<String>	Read-write	This group will be part of AAA session's internal group list. This will be helpful to admin in Nfactor flow to decide right AAA configuration for Relaying Party. In authentication policy AAA.USER.IS_MEMBER_OF("<default_auth_group>") is way to use this feature.
metadataurl	<String>	Read-write	This URL is used for obtaining samlidp metadata.
metadatarefreshinterval	<Integer>	Read-write	Interval in minute for fetching metadata from specified metadata URL. Default value: 3600
signatureservice	<String>	Read-write	Name of the service in cloud used to sign the data. Minimum length = 1
samlsigningcertversion	<String>	Read-write	version of the certificate in signature service used to sign the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			SAMLResposne that is sent to Relying Party or Service Provider after successful authentication. Minimum length = 1
samlspcertversion	<String>	Read-write	version of the certificate in signature service used to verify the signature of the incoming AuthnRequest from a Relying Party or Service Provider. Minimum length = 1
acsurlrule	<String>	Read-write	Expression that will be evaluated to allow Assertion Consumer Service URI coming in the SAML Request. Maximum length = 8191
metadataimportstatus	<String>	Read-only	Describes metadata import status. Default value: INIT Possible values = INIT, SUCCESS, FAIL
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET
- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

{ "authenticationsamlidpprofile": [ { "__count": "#no"} ] }
```

authenticationsamlpolicy

Configuration for AAA Saml policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the SAML policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after SAML policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my authentication policy" or 'my authentication policy'). Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
rule	<String>	Read-write	Name of the Citrix ADC named rule, or an expression, that the policy uses to determine whether to attempt to authenticate the user with the SAML server. Minimum length = 1
reqaction	<String>	Read-write	Name of the SAML authentication action to be performed if the policy matches. Minimum length = 1
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET
- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationsamlpolicy":{

<b>"name":<String_value>,

</b><b>"rule":<String_value>,

</b><b>"reqaction":<String_value>

</b>}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy/ name_value<String>
HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationsamlpolicy":{

<b>"name":<String_value>,

</b>"rule":<String_value>,

"reqaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy? **action=unset HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationsamlpolicy":{

<b>"name":<String_value>,

</b>"rule":true,

"reqaction":true

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of authenticationsamlpolicy resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy? **view=summary**

Use this query-parameter to get the summary output of authenticationsamlpolicy resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationsamlpolicy resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationsamlpolicy": [ {

"name":<String_value>,

"rule":<String_value>,

"reqaction":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy/ name_value<String> **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy/ name_value<String> ? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

view http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy/ name_value<String> ? **view=summary**

Use this query-parameter to get the summary output of authenticationsamlpolicy resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationsamlpolicy": [ {

"name":<String_value>,

"rule":<String_value>,

"reqaction":<String_value>,

"_nextgenapiresource":<String_value>
```

```
}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationsamlpolicy": [ { "__count": "#no"} ] }
```

authenticationsamlpolicy_authenticationvserver_binding

Binding object showing the authenticationvserver that can be bound to authenticationsamlpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the SAML policy. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	The entity name to which policy is bound.
activepolicy	<Integer>	Read-only	.
priority	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlpolicy_authenticationvserver_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlpolicy_authenticationvserver_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of authenticationsamlpolicy_authenticationvserver_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlpolicy_authenticationvserver_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationsamlpolicy_authenticationvserver_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationsamlpolicy_authenticationvserver_binding": [ {

"name":<String_value>,

"boundto":<String_value>,

"activepolicy":<Integer_value>,

"priority":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlpolicy_authenticationvserver_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlpolicy_authenticationvserver_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationsamlpolicy_authenticationvserver_binding": [ {

"name":<String_value>,

"boundto":<String_value>,

"activepolicy":<Integer_value>,

"priority":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationsamlpolicy_authenticationvserver_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"authenticationsamlpolicy_authenticationvserver_binding": [ { "__count":
"#no"} ] }
```

authenticationsamlpolicy_binding

Binding object which returns the resources bound to authenticationsamlpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the SAML policy. Minimum length = 1
authenticationsamlpolicy_vpnglobal_binding	<authenticationsamlpolicy_vpnglobal_binding[]>	Read-only	vpnglobal that can be bound to authenticationsamlpolicy.
authenticationsamlpolicy_vpnvserver_binding	<authenticationsamlpolicy_vpnvserver_binding[]>	Read-only	vpnvserver that can be bound to authenticationsamlpolicy.
authenticationsamlpolicy_authenticationvserver_binding	<authenticationsamlpolicy_authenticationvserver_binding[]>	Read-only	authenticationvserver that can be bound to authenticationsamlpolicy.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy_binding/ name_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationsamlpolicy_binding": [ {

"name":<String_value>,

"authenticationsamlpolicy_vpnglobal_binding":<authenticationsamlpolicy_vpn
global_binding[]_value>,
```

```
"authenticationsamlpolicy_authenticationvserver_binding":<authenticationsa
mlpolicy_authenticationvserver_binding[]_value>,

"authenticationsamlpolicy_vpnvserver_binding":<authenticationsamlpolicy_vp
nvserver_binding[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/authenticationsamlpolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationsamlpolicy_binding": [ {

"name":<String_value>,

"authenticationsamlpolicy_vpnglobal_binding":<authenticationsamlpolicy_vpn
global_binding[]_value>,
```

```
"authenticationsamlpolicy_authenticationvserver_binding":<authenticationsa
mlpolicy_authenticationvserver_binding[]_value>,

"authenticationsamlpolicy_vpnvserver_binding":<authenticationsamlpolicy_vp
nvserver_binding[]_value>

}]}
```

authenticationsamlpolicy_vpnglobal_binding

Binding object showing the vpnglobal that can be bound to authenticationsamlpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	The entity name to which policy is bound.
name	<String>	Read-write	Name of the SAML policy. Minimum length = 1
priority	<Integer>	Read-only	.
activepolicy	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

authenticationsmartaccesspolicy

Configuration for SmartAccess policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the Smartaccess policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after Smartaccess policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			single quotation marks (for example, "my authentication policy" or 'my authentication policy'). Minimum length = 1
rule	<String>	Read-write	Name of the Citrix ADC named rule, or an expression. Minimum length = 1
action	<String>	Read-write	Name of the Smartaccess profile to use if the policy matches. Minimum length = 1
comment	<String>	Read-write	Any comments to preserve information about this policy.
hits	<Integer>	Read-only	Number of hits.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationsmartaccesspolicy_binding": [ {

"name":<String_value>,

"authenticationsmartaccesspolicy_authenticationvserver_binding":<authentic
ationsmartaccesspolicy_authenticationvserver_binding[]_value>

}]}
```

authenticationsmartaccessprofile

Configuration for SmartAccess profile resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the Smartaccess profile. Minimum length = 1
tags	<String>	Read-write	The tag that is associated with Smartaccess profile. Minimum length = 1
comment	<String>	Read-write	Optional comment for the profile.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- UPDATE
- UNSET
- DELETE
- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsmartaccessprofile **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationsmartaccessprofile":{

<b>"name":<String_value>,

</b><b>"tags":<String_value>,
```

```
</b>"comment":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsmartaccessprofile **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationsmartaccessprofile":{

<b>"name":<String_value>,

</b>"tags":<String_value>,

"comment":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsmartaccessprofile?**action=unset HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationsmartaccessprofile":{

<b>"name":<String_value>,

</b>"comment":true

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsmartaccessprofile/name_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationsmartaccessprofile **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/authenticationsmartaccessprofile?**attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/authenticationsmartaccessprofile? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of authenticationsmartaccessprofile resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/authenticationsmartaccessprofile? **view=summary**

Use this query-parameter to get the summary output of authenticationsmartaccessprofile resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/authenticationsmartaccessprofile? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationsmartaccessprofile resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```

authenticationstorefrontauthaction

Configuration for Storefront authentication action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the Storefront Authentication action. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after the profile is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my authentication action" or 'my authentication action'). Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
serverurl	<String>	Read-write	URL of the Storefront server. This is the FQDN of the Storefront server. example: https://storefront.com/. Authentication endpoints are learned dynamically by Gateway.
domain	<String>	Read-write	Domain of the server that is used for authentication. If users enter name without domain, this parameter is added to username in the authentication request to server.
defaultauthenticationgroup	<String>	Read-write	This is the default group that is chosen when the authentication succeeds in addition to extracted groups.
success	<Integer>	Read-only	.
failure	<Integer>	Read-only	.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

authenticationtacacspolicy

Configuration for TACACS policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the TACACS+ policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after TACACS+ policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			name in double or single quotation marks (for example, "my authentication policy" or 'my authentication policy'). Minimum length = 1
rule	<String>	Read-write	Name of the Citrix ADC named rule, or an expression, that the policy uses to determine whether to attempt to authenticate the user with the TACACS+ server. Minimum length = 1
reqaction	<String>	Read-write	Name of the TACACS+ action to perform if the policy matches. Minimum length = 1
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET

- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.
- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationtacacspolicy":{

<b>"name":<String_value>,

</b><b>"rule":<String_value>,

</b>"reqaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy/ name_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationtacacspolicy":{

<b>"name":<String_value>,
```

```
</b>"rule":<String_value>,

"reqaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy? **action=unset**
HTTP Method: POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationtacacspolicy":{

<b>"name":<String_value>,

</b>"rule":true,

"reqaction":true

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of authenticationtacacspolicy resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy? **view=summary**

Use this query-parameter to get the summary output of authenticationtacacspolicy resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationtacacspolicy resources in chunks.

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy_vpnglobal_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationtacacspolicy_vpnglobal_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of authenticationtacacspolicy_vpnglobal_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ authenticationtacacspolicy_vpnglobal_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationtacacspolicy_vpnglobal_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationtacacspolicy_vpnglobal_binding": [ {

"name":<String_value>,

"boundto":<String_value>,

"priority":<Integer_value>,

"activepolicy":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy_vpnglobal_binding
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy_vpnglobal_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationtacacspolicy_vpnglobal_binding": [ {

"name":<String_value>,

"boundto":<String_value>,

"priority":<Integer_value>,

"activepolicy":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationtacacspolicy_vpnglobal_binding/name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"authenticationtacacspolicy_vpnglobal_binding": [ { "__count": "#no"} ] }
```

authenticationtacacspolicy_vpnvserver_binding

Binding object showing the vpnvserver that can be bound to authenticationtacacspolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the TACACS+ policy. Minimum length = 1
boundto	<String>	Read-write	The entity name to which policy is bound.
activepolicy	<Integer>	Read-only	.
priority	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

authenticationvserver

Configuration for authentication virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the new authentication virtual server. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Can be changed after the authentication virtual server is added by using the rename authentication vserver command. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			"my authentication policy" or 'my authentication policy'). Minimum length = 1
servicetype	<String>	Read-write	Protocol type of the authentication virtual server. Always SSL. Default value: SSL Possible values = SSL
ipv46	<String>	Read-write	IP address of the authentication virtual server, if a single IP address is assigned to the virtual server. Minimum length = 1
range	<Integer>	Read-write	If you are creating a series of virtual servers with a range of IP addresses assigned to them, the length of the range. The new range of authentication virtual servers will have IP addresses consecutively numbered, starting with the primary address specified

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			with the IP Address parameter. Default value: 1 Minimum value = 1
port	<Integer>	Read-write	TCP port on which the virtual server accepts connections. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
state	<String>	Read-write	Initial state of the new virtual server. Default value: ENABLED Possible values = ENABLED, DISABLED
authentication	<String>	Read-write	Require users to be authenticated before sending traffic through this virtual server. Default value: ON Possible values = ON, OFF
authenticationdomain	<String>	Read-write	The domain of the authentication cookie set by Authentication vserver.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 3 Maximum length = 252
comment	<String>	Read-write	Any comments associated with this virtual server.
td	<Integer>	Read-write	Integer value that uniquely identifies the traffic domain in which you want to configure the entity. If you do not specify an ID, the entity becomes part of the default traffic domain, which has an ID of 0. Minimum value = 0 Maximum value = 4094
appflowlog	<String>	Read-write	Log AppFlow flow information. Default value: ENABLED Possible values = ENABLED, DISABLED
maxloginattempts	<Integer>	Read-write	Maximum Number of login Attempts. Minimum value = 1 Maximum value = 255

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
failedlogintimeout	<Integer>	Read-write	Number of minutes an account will be locked if user exceeds maximum permissible attempts. Minimum value = 1
certkeynames	<String>	Read-write	Name of the certificate key that was bound to the corresponding SSL virtual server as the Certificate Authority for the device certificate. Minimum length = 1 Maximum length = 127
samesite	<String>	Read-write	SameSite attribute value for Cookies generated in AAATM context. This attribute value will be appended only for the cookies which are specified in the builtin patset ns_cookies_samesite. Possible values = None, LAX, STRICT
wasmmodule	<String>	Read-write	Name of the WASM module to assign to this virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
newname	<String>	Read-write	New name of the authentication virtual server. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, 'my authentication policy' or "my authentication policy"). Minimum length = 1
ip	<String>	Read-only	The Virtual IP address of the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			authentication vserver.
value	<String>	Read-only	Indicates whether or not the certificate is bound or if SSL offload is disabled. Possible values = Certkey/ Certkeybundle/Vault not bound/Cert-store not usable, SSL feature disabled
type	<String>	Read-only	The type of Virtual Server, e.g. CONTENT based or ADDRESS based. Possible values = CONTENT, ADDRESS
curstate	<String>	Read-only	The current state of the Virtual server, e.g. UP, DOWN, BUSY, etc. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
status	<Integer>	Read-only	Whether or not this vserver responds to ARPs and whether or not round-robin selection is temporarily in effect.
cachetype	<String>	Read-only	Virtual server's cache type. The options are: TRANSPARENT, REVERSE and FORWARD. Possible values = TRANSPARENT, REVERSE, FORWARD
redirect	<String>	Read-only	The cache redirect policy. The valid redirect policies are: l. CACHE - Directs all requests to the cache. 2. POLICY - Applies cache redirection policy to determine whether the request should be directed to the cache or origin. This is the default setting.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			3. ORIGIN - Directs all requests to the origin server. Possible values = CACHE, POLICY, ORIGIN
precedence	<String>	Read-only	This argument is used only when configuring content switching on the specified virtual server. This is applicable only if both the URL and RULE-based policies have been configured on the same virtual server. It specifies the type of policy (URL or RULE) that takes precedence on the content switching virtual server. The default setting is RULE. l URL - In this case, the incoming request is matched against the URL-based policies before the rule-based policies.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			l RULE - In this case, the incoming request is matched against the rule-based policies before the URL-based policies. For all URL-based policies, the precedence hierarchy is: 1. Domain and exact URL 2. Domain, prefix and suffix 3. Domain and suffix 4. Domain and prefix 5. Domain only 6. Exact URL 7. Prefix and suffix 8. Suffix only 9. Prefix only 10. Default. Possible values = RULE, URL

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
redirecturl	<String>	Read-only	The URL where traffic is redirected if the virtual server in system becomes unavailable. WARNING! Make sure that the domain you specify in the URL does not match the domain specified in the -d domainName argument of the ###add cs policy### command. If the same domain is specified in both arguments, the request will be continuously redirected to the same unavailable virtual server in the system. If so, the user may not get the requested content.
curaaausers	<Integer>	Read-only	The number of current users logged in to this vserver.
policy	<String>	Read-only	The name of the policy, if any, bound to the authentication vserver.
servicename	<String>	Read-only	The name of the service, if any, to which the vserver policy is bound.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
weight	<Integer>	Read-only	Weight for this service, if any. This weight is used when the system performs load balancing, giving greater priority to a specific service. It is useful when the services bound to a virtual server are of different capacity.
cachevserver	<String>	Read-only	The name of the default target cache virtual server, if any, to which requests are redirected.
backupvserver	<String>	Read-only	The name of the backup vpn virtual server for this vpn virtual server.
clttimeout	<Integer>	Read-only	The idle time, if any, in seconds after which the client connection is terminated.
somethod	<String>	Read-only	VPN client applications are allocated from a block of Intranet IP addresses. That block may be exhausted after a certain number of connections. This switch specifies the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			method used to determine whether or not a new connection will spillover, or exhaust, the allocated block of Intranet IP addresses for that application. Possible values are CONNECTION or DYNAMICCONNECTION. CONNECTION means that a static integer value is the hard limit for the spillover threshold. The spillover threshold is described below. DYNAMICCONNECTION means that the spillover threshold is set according to the maximum number of connections defined for the vpn vserver.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = CONNECTION, DYNAMICCONNECTION, BANDWIDTH, HEALTH, LLMQUOTA, NONE
sothreshold	<Integer>	Read-only	VPN client applications are allocated from a block of Intranet IP addresses. That block may be exhausted after a certain number of connections. The value of this option is number of client connections after which the Mapped IP address is used as the client source IP address instead of an address from the allocated block of Intranet IP addresses.
sopersistence	<String>	Read-only	Whether or not cookie-based site persistance is enabled for this VPN vserver. Possible values are 'ConnectionProxy',

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			HTTPRedirect, or NONE. Possible values = ENABLED, DISABLED
sopersistencetimeout	<Integer>	Read-only	The timeout, if any, for cookie-based site persistance of this VPN vserver.
priority	<Integer>	Read-only	The priority, if any, of the vpn vserver policy.
downstateflush	<String>	Read-only	Perform delayed clean up of connections on this vserver. Possible values = ENABLED, DISABLED
bindpoint	<String>	Read-only	Bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
disableprimaryondown	<String>	Read-only	Tells whether traffic will continue reaching backup vservers even after

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			primary comes UP from DOWN state. Possible values = ENABLED, DISABLED
listenpolicy	<String>	Read-only	Listenpolicy configured for authentication vserver.
listenpriority	<Integer>	Read-only	Priority of listen policy for authentication vserver.
tcpprofilename	<String>	Read-only	The name of the TCP profile.
httpprofilename	<String>	Read-only	Name of the HTTP profile.
vstype	<Integer>	Read-only	Virtual Server Type, e.g. Load Balancing, Content Switch, Cache Redirection.
ngname	<String>	Read-only	Nodegroup devno to which this authentication vsever belongs to.
secondary	<Boolean>	Read-only	Bind the authentication policy to the secondary chain. Provides for multifactor authentication in which a user must authenticate via

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			both a primary authentication method and, afterward, via a secondary authentication method. Because user groups are aggregated across authentication systems, usernames must be the same on all authentication servers. Passwords can be different.
groupextraction	<Boolean>	Read-only	Bind the Authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationvserver? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationvserver": [ { "__count": "#no"} ] }
```

authenticationvserver_auditnslogpolicy_binding

Binding object showing the auditnslogpolicy that can be bound to authenticationvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	The priority, if any, of the vpn vserver policy.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
name	<String>	Read-write	Name of the authentication virtual server to which to bind the policy. Minimum length = 1
secondary	<Boolean>	Read-write	Applicable only while bindind classic authentication policy as advance authentication policy use nFactor.
nextfactor	<String>	Read-write	Applicable only while binding advance authentication policy as classic authentication policy does not support nFactor.
groupextraction	<Boolean>	Read-write	Applicable only while bindind classic authentication policy as advance authentication policy use nFactor.
gotopriorityexpression	<String>	Read-write	Applicable only to advance authentication policy. Expression or other value specifying the next policy to be evaluated if the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * USE_INVOCATION_RESULT - Applicable if this policy invokes another policy label. If the final goto in the invoked policy label has a value of END, the evaluation stops. If the final goto is anything other than END, the current policy label performs a NEXT. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a priority number that is numerically higher than the highest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			85 does not exist in the policy label.
policy	<String>	Read-write	The name of the policy, if any, bound to the authentication vserver.
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/authenticationvserver_auditnslogpolicy_binding
HTTP Method: PUT

Request Headers:

Content-Type:application/json

Request Payload:

```
{

"authenticationvserver_auditnslogpolicy_binding":{

<b>"name":<String_value>,

</b>"policy":<String_value>,

"priority":<Integer_value>,

"secondary":<Boolean_value>,

"groupextraction":<Boolean_value>,

"nextfactor":<String_value>,

"gotopriorityexpression":<String_value>,

"bindpoint":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_auditnslogpolicy_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/authenticationvserver_auditnslogpolicy_binding/ name_value<String> ? **args=policy: <String_value> ,secondary: <Boolean_value> ,groupextraction: <Boolean_value> ,bindpoint: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_auditnslogpolicy_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/authenticationvserver_auditnslogpolicy_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of authenticationvserver_auditnslogpolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_auditnslogpolicy_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationvserver_auditnslogpolicy_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

authenticationvserver_authenticationldappolicy_binding

Binding object showing the authenticationldappolicy that can be bound to authenticationvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the authentication virtual server to which to bind the policy. Minimum length = 1
secondary	<Boolean>	Read-write	Bind the authentication policy to the secondary chain. Provides for multifactor authentication in which a user must authenticate via both a primary authentication method and, afterward, via a secondary authentication method. Because user groups are aggregated across authentication systems, usernames must be the same on all authentication servers. Passwords can be different.
priority	<Integer>	Read-write	The priority, if any, of the vpn vserver policy.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
gotopriorityexpression	<String>	Read-write	Applicable only to advance authentication policy. Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * USE_INVOCATION_RESULT - Applicable if this policy invokes another policy label. If the final goto in the invoked policy label has a value of END, the evaluation stops.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			If the final goto is anything other than END, the current policy label performs a NEXT. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a priority number that is numerically higher than the highest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
policy	<String>	Read-write	The name of the policy, if any, bound to the authentication vserver.
groupextraction	<Boolean>	Read-write	Bind the Authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			called if primary and/ or secondary authentication has succeeded.
nextfactor	<String>	Read-write	Applicable only while binding advance authentication policy as classic authentication policy does not support nFactor.
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.
- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/ authenticationvserver_authenticationldappolicy_binding **HTTP Method:** PUT

Request Headers:

			UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
policy	<String>	Read-write	The name of the policy, if any, bound to the authentication vserver.
groupextraction	<Boolean>	Read-write	Applicable only while bindind classic authentication policy

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			as advance authentication policy use nFactor.
nextfactor	<String>	Read-write	Applicable only while binding advance authentication policy as classic authentication policy does not support nFactor.
name	<String>	Read-write	Name of the authentication virtual server to which to bind the policy. Minimum length = 1
secondary	<Boolean>	Read-write	Bind the authentication policy to the secondary chain. Provides for multifactor authentication in which a user must authenticate via both a primary authentication method and, afterward, via a secondary authentication method. Because user groups are aggregated across authentication systems, usernames must be the same on all authentication servers. Passwords can be different.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	The priority, if any, of the vpn vserver policy.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

- ADD
- DELETE
- GET
- GET (ALL)

- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policy	<String>	Read-write	The name of the policy, if any, bound to the authentication vserver.
gotopriorityexpression	<String>	Read-write	Applicable only to advance authentication policy. Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * USE_INVOCATION_RESULT - Applicable if this policy invokes another policy label. If the final goto in the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			invoked policy label has a value of END, the evaluation stops. If the final goto is anything other than END, the current policy label performs a NEXT. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a priority number that is numerically higher than the highest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
groupextraction	<Boolean>	Read-write	Applicable only while bindind classic authentication policy as advance authentication policy use nFactor.
nextfactor	<String>	Read-write	Applicable only while binding advance authentication policy as classic

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			authentication policy does not support nFactor.
secondary	<Boolean>	Read-write	Bind the authentication policy to the secondary chain. Provides for multifactor authentication in which a user must authenticate via both a primary authentication method and, afterward, via a secondary authentication method. Because user groups are aggregated across authentication systems, usernames must be the same on all authentication servers. Passwords can be different.
name	<String>	Read-write	Name of the authentication virtual server to which to bind the policy. Minimum length = 1
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
priority	<Integer>	Read-write	The priority, if any, of the vpn vserver policy.
acttype	<Integer>	Read-only	.

Use this query-parameter to get the filtered set of authenticationvserver_authenticationradiuspolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationradiuspolicy_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationvserver_authenticationradiuspolicy_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationvserver_authenticationradiuspolicy_binding": [ {

"policy":<String_value>,

"gotopriorityexpression":<String_value>,

"groupextraction":<Boolean_value>,

"nextfactor":<String_value>,

"secondary":<Boolean_value>,
```

```
"name":<String_value>,

"bindpoint":<String_value>,

"priority":<Integer_value>,

"acttype":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationradiuspolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationradiuspolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationvserver_authenticationradiuspolicy_binding": [ {

"policy":<String_value>,
```

```
"gotopriorityexpression":<String_value>,

"groupextraction":<Boolean_value>,

"nextfactor":<String_value>,

"secondary":<Boolean_value>,

"name":<String_value>,

"bindpoint":<String_value>,

"priority":<Integer_value>,

"acttype":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationradiuspolicy_binding/ name_value<String> ? **count=yes**
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"authenticationvserver_authenticationradiuspolicy_binding":
[ { "__count": "#no"} ] }
```

authenticationvserver_authenticationsamlidppolicy_binding

Binding object showing the authenticationsamlidppolicy that can be bound to authenticationvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
policy	<String>	Read-write	The name of the policy, if any, bound to the authentication vserver.
nextfactor	<String>	Read-write	On success invoke label.
groupextraction	<Boolean>	Read-write	Applicable only while bindind classic authentication policy as advance authentication policy use nFactor.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
priority	<Integer>	Read-write	The priority, if any, of the vpn vserver policy.
name	<String>	Read-write	Name of the authentication virtual server to which to bind the policy. Minimum length = 1
secondary	<Boolean>	Read-write	Applicable only while bindind classic authentication policy as advance authentication policy use nFactor.
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/authenticationvserver_authenticationsamlidppolicy_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"authenticationvserver_authenticationsamlidppolicy_binding":{

<b>"name":<String_value>,

</b>"policy":<String_value>,

"priority":<Integer_value>,

"secondary":<Boolean_value>,

"groupextraction":<Boolean_value>,

"nextfactor":<String_value>,

"gotopriorityexpression":<String_value>,

"bindpoint":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationsamlidppolicy_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationsamlidppolicy_binding/ name_value<String> ? **args=policy: <String_value> ,secondary: <Boolean_value> ,groupextraction: <Boolean_value> ,bindpoint: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationsamlidppolicy_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationsamlidppolicy_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of authenticationvserver_authenticationsamlidppolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationsamlidppolicy_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationvserver_authenticationsamlidppolicy_binding resources in chunks.

[ { "__count": "#no"} ] }
```

authenticationvserver_authenticationsamlpolicy_binding

Binding object showing the authenticationsamlpolicy that can be bound to authenticationvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
groupextraction	<Boolean>	Read-write	Applicable only while bindind classic authentication policy as advance authentication policy use nFactor.
nextfactor	<String>	Read-write	Applicable only while binding advance authentication policy as classic authentication policy does not support nFactor.
policy	<String>	Read-write	The name of the policy, if any, bound

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			to the authentication vserver.
gotopriorityexpression	<String>	Read-write	Applicable only to advance authentication policy. Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * USE_INVOCATION_RESULT - Applicable if this policy invokes another policy label. If the final goto in the invoked policy label has a value of END, the evaluation stops. If the final goto is anything other than END, the current policy label performs a NEXT. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a priority number that is numerically higher than the highest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
secondary	<Boolean>	Read-write	Bind the authentication policy to the secondary chain. Provides for multifactor authentication in which a user must authenticate via both a primary authentication method and, afterward, via a secondary authentication method. Because user groups are aggregated across authentication systems, usernames must be the same on all authentication servers. Passwords can be different.
name	<String>	Read-write	Name of the authentication virtual server to which to bind the policy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1
priority	<Integer>	Read-write	The priority, if any, of the vpn vserver policy.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"authenticationvserver_authenticationsmartaccesspolicy_binding":
[ { "__count": "#no"} ] }
```

authenticationvserver_authenticationtacacspolicy_binding

Binding object showing the authenticationtacacspolicy that can be bound to authenticationvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
priority	<Integer>	Read-write	The priority, if any, of the vpn vserver policy.
secondary	<Boolean>	Read-write	Bind the authentication policy to the secondary chain. Provides for multifactor authentication in which a user must authenticate via both a primary authentication

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			method and, afterward, via a secondary authentication method. Because user groups are aggregated across authentication systems, usernames must be the same on all authentication servers. Passwords can be different.
name	<String>	Read-write	Name of the authentication virtual server to which to bind the policy. Minimum length = 1
policy	<String>	Read-write	The name of the policy, if any, bound to the authentication vserver.
gotopriorityexpression	<String>	Read-write	Applicable only to advance authentication policy. Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. *

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			USE_INVOCATION_RESULT - Applicable if this policy invokes another policy label. If the final goto in the invoked policy label has a value of END, the evaluation stops. If the final goto is anything other than END, the current policy label performs a NEXT. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a priority number that is numerically higher than the highest numbered

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
nextfactor	<String>	Read-write	Applicable only while binding advance authentication policy as classic authentication policy

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			does not support nFactor.
groupextraction	<Boolean>	Read-write	Applicable only while bindind classic authentication policy as advance authentication policy use nFactor.
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/ authenticationvserver_authenticationtacacspolicy_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"authenticationvserver_authenticationtacacspolicy_binding":{

<b>"name":<String_value>,

</b>"policy":<String_value>,

"priority":<Integer_value>,

"secondary":<Boolean_value>,

"groupextraction":<Boolean_value>,

"nextfactor":<String_value>,

"gotopriorityexpression":<String_value>,

"bindpoint":<String_value>
```

```
}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationtacacspolicy_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationtacacspolicy_binding/ name_value<String> ? **args=policy: <String_value> ,secondary: <Boolean_value> ,groupextraction: <Boolean_value> ,bindpoint: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationtacacspolicy_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationtacacspolicy_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of authenticationvserver_authenticationtacacspolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ authenticationvserver_authenticationtacacspolicy_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationvserver_authenticationtacacspolicy_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationvserver_rewritepolicy_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"authenticationvserver_rewritepolicy_binding": [ { "__count": "#no"} ] }
```

authenticationvserver_tmsessionpolicy_binding

Binding object showing the tmsessionpolicy that can be bound to authenticationvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the authentication virtual server to which to bind the policy. Minimum length = 1
secondary	<Boolean>	Read-write	Applicable only while bindind classic authentication policy as advance authentication policy use nFactor.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
priority	<Integer>	Read-write	The priority, if any, of the vpn vserver policy.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
policy	<String>	Read-write	The name of the policy, if any, bound to the authentication vserver.
groupextraction	<Boolean>	Read-write	Applicable only while bindind classic authentication policy as advance authentication policy use nFactor.
nextfactor	<String>	Read-write	Applicable only while binding advance authentication policy as classic authentication policy does not support nFactor.
__count	<Double>	Read-write	count parameter

Operations

- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/authenticationvserver_tmsessionpolicy_binding

authenticationwebauthaction

Configuration for Web authentication action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the Web Authentication action. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after the profile is created.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my authentication action" or 'my authentication action'). Minimum length = 1
serverip	<String>	Read-write	IP address of the web server to be used for authentication. Minimum length = 1
serverport	<Integer>	Read-write	Port on which the web server accepts connections. Minimum value = 1 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
fullreqexpr	<String>	Read-write	Exact HTTP request, in the form of an expression, which the Citrix ADC sends

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			to the authentication server. The Citrix ADC does not check the validity of this request. One must manually validate the request.
scheme	<String>	Read-write	Type of scheme for the web server. Possible values = http, https
successrule	<String>	Read-write	Expression, that checks to see if authentication is successful.
defaultauthenticationgroup	<String>	Read-write	This is the default group that is chosen when the authentication succeeds in addition to extracted groups.
attribute1	<String>	Read-write	Expression that would be evaluated to extract attribute1 from the webauth response. Maximum length = 128
attribute2	<String>	Read-write	Expression that would be evaluated to extract attribute2 from the webauth response.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum length = 128
attribute3	<String>	Read-write	Expression that would be evaluated to extract attribute3 from the webauth response. Maximum length = 128
attribute4	<String>	Read-write	Expression that would be evaluated to extract attribute4 from the webauth response. Maximum length = 128
attribute5	<String>	Read-write	Expression that would be evaluated to extract attribute5 from the webauth response. Maximum length = 128
attribute6	<String>	Read-write	Expression that would be evaluated to extract attribute6 from the webauth response. Maximum length = 128
attribute7	<String>	Read-write	Expression that would be evaluated to extract attribute7 from the webauth response.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum length = 128
attribute8	<String>	Read-write	Expression that would be evaluated to extract attribute8 from the webauth response. Maximum length = 128
attribute9	<String>	Read-write	Expression that would be evaluated to extract attribute9 from the webauth response. Maximum length = 128
attribute10	<String>	Read-write	Expression that would be evaluated to extract attribute10 from the webauth response. Maximum length = 128
attribute11	<String>	Read-write	Expression that would be evaluated to extract attribute11 from the webauth response. Maximum length = 128
attribute12	<String>	Read-write	Expression that would be evaluated to extract attribute12 from the webauth response.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum length = 128
attribute13	<String>	Read-write	Expression that would be evaluated to extract attribute13 from the webauth response. Maximum length = 128
attribute14	<String>	Read-write	Expression that would be evaluated to extract attribute14 from the webauth response. Maximum length = 128
attribute15	<String>	Read-write	Expression that would be evaluated to extract attribute15 from the webauth response. Maximum length = 128
attribute16	<String>	Read-write	Expression that would be evaluated to extract attribute16 from the webauth response. Maximum length = 128
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationwebauthaction": [ { "__count": "#no"} ] }
```

authenticationwebauthpolicy

Configuration for Web authentication policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the WebAuth policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after LDAP policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my authentication policy" or 'my authentication policy'). Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
rule	<String>	Read-write	Name of the Citrix ADC named rule, or an expression, that the policy uses to determine whether to attempt to authenticate the user with the Web server. Minimum length = 1
action	<String>	Read-write	Name of the WebAuth action to perform if the policy matches. Minimum length = 1
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationwebauthpolicy":{

<b>"name":<String_value>,

</b><b>"rule":<String_value>,

</b><b>"action":<String_value>

</b>}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy/ name_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"authenticationwebauthpolicy":{

<b>"name":<String_value>,

</b>"rule":<String_value>,

"action":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of authenticationwebauthpolicy resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy? **view=summary**

Use this query-parameter to get the summary output of authenticationwebauthpolicy resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authenticationwebauthpolicy resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationwebauthpolicy": [ {

"name":<String_value>,

"rule":<String_value>,

"action":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy/ name_value<String> **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/ authenticationwebauthpolicy/ name_value<String> ? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

view http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy/ name_value<String> ? **view=summary**

Use this query-parameter to get the summary output of authenticationwebauthpolicy resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationwebauthpolicy": [ {

"name":<String_value>,

"rule":<String_value>,

"action":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/authenticationwebauthpolicy? **count=yes**
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authenticationwebauthpolicy": [ { "__count": "#no"} ] }
```

authenticationwebauthpolicy_authenticationvserver_binding

Binding object showing the authenticationvserver that can be bound to authenticationwebauthpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	The entity name to which policy is bound.
name	<String>	Read-write	Name of the WebAuth policy. Minimum length = 1
priority	<Integer>	Read-only	.
activepolicy	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationwebauthpolicy_vpnvserver_binding": [ {

"boundto":<String_value>,

"name":<String_value>,

"activepolicy":<Integer_value>,

"priority":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationwebauthpolicy_vpnvserver_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/ authenticationwebauthpolicy_vpnvserver_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationwebauthpolicy_vpnvserver_binding": [ {

"boundto":<String_value>,

"name":<String_value>,

"activepolicy":<Integer_value>,

"priority":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authenticationwebauthpolicy_vpnvserver_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"authenticationwebauthpolicy_vpnvserver_binding": [ { "__count":
"#no"} ] }
```

authorization

Authorization

Authorization configuration. Authorization services check which resources users are authorized to access, and grant permissions accordingly.

NAME	DESCRIPTION
authorizationaction	Configuration for authorization action
authorizationpolicy	Configuration for authorization policy
authorizationpolicy_aaagroup_binding	Binding object showing the aaagroup that can be bound to authorizationpolicy
authorizationpolicy_aaauser_binding	Binding object showing the aaauser that can be bound to authorizationpolicy
authorizationpolicy_authorizationpolicylabel_binding	Binding object showing the authorizationpolicylabel that can be bound to authorizationpolicy
authorizationpolicy_binding	Binding object showing the resources that can be bound to authorizationpolicy
authorizationpolicy_csvserver_binding	Binding object showing the csvserver that can be bound to authorizationpolicy
authorizationpolicy_lbvserver_binding	Binding object showing the lbvserver that can be bound to authorizationpolicy
authorizationpolicylabel	Configuration for authorization policy label

NAME	DESCRIPTION
authorizationpolicylabel_authorizationpolicy_binding	Binding object showing the authorizationpolicy that can be bound to authorizationpolicylabel
authorizationpolicylabel_binding	Binding object showing the resources that can be bound to authorizationpolicylabel

authorizationaction

Configuration for authorization action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of authorization action. Minimum length = 1
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authorizationaction **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/authorizationaction? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/authorizationaction? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of authorizationaction resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/authorizationaction? **view=summary**

Use this query-parameter to get the summary output of authorizationaction resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/authorizationaction? **pagesize=#no;pageno=#no**

Use this query-parameter to get the authorizationaction resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authorizationaction": [ {

"name":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authorizationaction/ name_value<String>
Query-parameters: attrs http:// <netscaler-ip-address> /nitro/v1/config/authorizationaction/ name_value<String> ? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

view http:// <netscaler-ip-address> /nitro/v1/config/authorizationaction/ name_value<String> ? **view=summary**

Use this query-parameter to get the summary output of authorizationaction resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authorizationaction": [ {

"name":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/authorizationaction? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authorizationaction": [ { "__count": "#no"} ] }
```

authorizationpolicy

Configuration for authorization policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the new authorization policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after the authorization policy is added. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			name in double or single quotation marks (for example, "my authorization policy" or 'my authorization policy'). Minimum length = 1
rule	<String>	Read-write	Name of the Citrix ADC named rule, or an expression, that the policy uses to perform the authentication.
action	<String>	Read-write	Action to perform if the policy matches: either allow or deny the request. Minimum length = 1
newname	<String>	Read-write	The new name of the author policy. Minimum length = 1
activepolicy	<Integer>	Read-only	Indicates whether policy is bound or not.
expressiontype	<String>	Read-only	Type of policy (Classic/Advanced) . Possible values = Classic Policy, Advanced Policy
hits	<Integer>	Read-only	Number of hits.
_nextgenapiresource	<String>	Read-only	.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-only	count parameter

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authorizationpolicy_authorizationpolicylabel_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"authorizationpolicy_authorizationpolicylabel_binding": [ { "__count":
"#no"} ] }
```

authorizationpolicy_binding

Binding object which returns the resources bound to authorizationpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the authorization policy. Minimum length = 1
authorizationpolicy_csvserver_binding	<authorizationpolicy_csvserver_binding[]>	Read-only	csvserver that can be bound to authorizationpolicy.
authorizationpolicy_authorizationpolicylabel_binding	<authorizationpolicy_authorizationpolicylabel_binding[]>	Read-only	authorizationpolicylabel that can be bound to authorizationpolicy.
authorizationpolicy_aaagroup_binding	<authorizationpolicy_aaagroup_binding[]>	Read-only	aaagroup that can be bound to authorizationpolicy.
authorizationpolicy_lbvserver_binding	<authorizationpolicy_lbvserver_binding[]>	Read-only	lbvserver that can be bound to authorizationpolicy.
authorizationpolicy_aaauser_binding	<authorizationpolicy_aaauser_binding[]>	Read-only	aaauser that can be bound to authorizationpolicy.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authorizationpolicy_binding/ name_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authorizationpolicy_binding": [ {

"name":<String_value>,
```

```
"authorizationpolicy_authorizationpolicylabel_binding":<authorizationpolic
y_authorizationpolicylabel_binding[]_value>,

"authorizationpolicy_lbvserver_binding":<authorizationpolicy_lbvserver_bin
ding[]_value>,

"authorizationpolicy_csvserver_binding":<authorizationpolicy_csvserver_bin
ding[]_value>,

"authorizationpolicy_aaauser_binding":<authorizationpolicy_aaauser_binding
[]_value>,

"authorizationpolicy_aaagroup_binding":<authorizationpolicy_aaagroup_bindi
ng[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authorizationpolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/authorizationpolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authorizationpolicy_binding": [ {

"name":<String_value>,

"authorizationpolicy_authorizationpolicylabel_binding":<authorizationpolic
y_authorizationpolicylabel_binding[]_value>,

```
{"authorizationpolicy_lbvserver_binding": [ { "__count": "#no"} ] }
```

authorizationpolicylabel

Configuration for authorization policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name for the new authorization policy label. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after the authorization policy is created. The following requirement applies only to the Citrix ADC CLI:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my authorization policy label" or 'authorization policy label').
newname	<String>	Read-write	The new name of the auth policy label. Minimum length = 1
numpol	<Integer>	Read-only	Number of polices bound to label.
hits	<Integer>	Read-only	Number of times policy label was invoked.
policyname	<String>	Read-only	Name of the authorization policy to bind to the policy label.
priority	<Integer>	Read-only	Specifies the priority of the policy.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labeltype	<String>	Read-only	Type of invocation. Available settings function as follows: * reqvserver - Send the request to the specified request virtual server. * resvserver - Send the response to the specified response virtual server. * policylabel - Invoke the specified policy label. Possible values = reqvserver, resvserver, policylabel
invoke_labelname	<String>	Read-only	Name of the policy label to invoke if the current policy evaluates to TRUE, the invoke parameter is set, and Label Type is set to Policy Label.
flowtype	<Integer>	Read-only	Flowtype of the bound authorization policy.
description	<String>	Read-only	Description of the policylabel.
_nextgenapiresource	<String>	Read-only	.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-only	count parameter

authorizationpolicylabel_authorizationpolicy_binding

Binding object showing the authorizationpolicy that can be bound to authorizationpolicylabel.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labeltype	<String>	Read-write	Type of invocation. Available settings function as follows: * reqvserver - Send the request to the specified request virtual server. * resvserver - Send the response to the specified response virtual server. * policylabel - Invoke the specified policy label. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-write	Specifies the priority of the policy.
labelname	<String>	Read-write	Name of the authorization policy label to which to bind the policy.
policyname	<String>	Read-write	Name of the authorization policy

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			to bind to the policy label.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
invoke	<Boolean>	Read-write	If the current policy evaluates to TRUE, terminate evaluation of policies bound to the current policy label, and then either forward the request or response to the specified virtual server or evaluate the specified policy label.
invoke_labelname	<String>	Read-write	Name of the policy label to invoke if the current policy evaluates to TRUE, the invoke parameter is set, and Label Type is set to Policy Label.
__count	<Double>	Read-write	count parameter

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authorizationpolicylabel_authorizationpolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/ authorizationpolicylabel_authorizationpolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authorizationpolicylabel_authorizationpolicy_binding": [ {

"labeltype":<String_value>,

"priority":<Integer_value>,

"labelname":<String_value>,

"policyname":<String_value>,

"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,

"invoke_labelname":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/ authorizationpolicylabel_authorizationpolicy_binding/ labelname_value<String> ? **count=yes**
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"authorizationpolicylabel_authorizationpolicy_binding": [ { "__count":
"#no"} ] }
```

authorizationpolicylabel_binding

Binding object which returns the resources bound to authorizationpolicylabel.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name of the authorization policy label.
authorizationpolicylabel_authorizationpolicy_binding	<authorizationpolicylabel_authorizationpolicy_binding[]>	Read-only	authorizationpolicy that can be bound to authorizationpolicylabel.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.
- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/authorizationpolicylabel_binding/ labelname_value<String>

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response:

HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authorizationpolicylabel_binding": [ {

"labelname":<String_value>,
```

```
"authorizationpolicylabel_authorizationpolicy_binding":<authorizationpolic
ylabel_authorizationpolicy_binding[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/authorizationpolicylabel_binding

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters:

bulkbindings

http:// <netscaler-ip-address> /nitro/v1/config/authorizationpolicylabel_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response:

HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "authorizationpolicylabel_binding": [ {

"labelname":<String_value>,

"authorizationpolicylabel_authorizationpolicy_binding":<authorizationpolic
ylabel_authorizationpolicy_binding[]_value>

}]}
```

autoscale

Autoscale

AutoScale configuration.

NAME	DESCRIPTION
autoscaleaction	Configuration for autoscale action
autoscalepolicy	Configuration for Autoscale policy
autoscalepolicy_binding	Binding object showing the resources that can be bound to autoscalepolicy
autoscalepolicy_nstimer_binding	Binding object showing the nstimer that can be bound to autoscalepolicy
autoscaleprofile	Configuration for autoscale profile

autoscaleaction

Configuration for autoscale action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	ActionScale action name. Minimum length = 1
type	<String>	Read-write	The type of action. Possible values = SCALE_UP, SCALE_DOWN
profilename	<String>	Read-write	AutoScale profile name. Minimum length = 1
parameters	<String>	Read-write	Parameters to use in the action. Minimum length = 1
vmdestroygraceperiod	<Integer>	Read-write	Time in minutes a VM is kept in inactive state before destroying. Default value: 10
quiettime	<Integer>	Read-write	Time in seconds no other policy is evaluated or action is taken. Default value: 300
vserver	<String>	Read-write	Name of the vserver on which autoscale action has to be taken.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/autoscalepolicy_nstimer_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/autoscalepolicy_nstimer_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "autoscalepolicy_nstimer_binding": [ {

"boundto":<String_value>,

"name":<String_value>,

"priority":<Integer_value>,

"gotopriorityexpression":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/autoscalepolicy_nstimer_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"autoscalepolicy_nstimer_binding": [ { "__count": "#no"} ] }
```

autoscaleprofile

Configuration for autoscale profile resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	AutoScale profile name. Minimum length = 1
type	<String>	Read-write	The type of profile. Possible values = CLOUDSTACK
url	<String>	Read-write	URL providing the service. Minimum length = 1
apikey	<String>	Read-write	api key for authentication with service. Minimum length = 1
sharedsecret	<String>	Read-write	shared secret for authentication with service. Minimum length = 1
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

- GET (ALL)
- GET

- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/autoscaleprofile **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"autoscaleprofile":{

<b>"name":<String_value>,
```

```
</b><b>"type":<String_value>,

</b><b>"url":<String_value>,

</b><b>"apikey":<String_value>,

</b><b>"sharedsecret":<String_value>

</b>}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/autoscaleprofile/ name_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/autoscaleprofile **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"autoscaleprofile":{

<b>"name":<String_value>,
```

```
</b>"url":<String_value>,

"apikey":<String_value>,

"sharedsecret":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/autoscaleprofile **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/autoscaleprofile? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/autoscaleprofile? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of autoscaleprofile resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/autoscaleprofile? **view=summary**

Use this query-parameter to get the summary output of autoscaleprofile resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/autoscaleprofile? **pagesize=#no;pageno=#no**

Use this query-parameter to get the autoscaleprofile resources in chunks.

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

extendedmemoryparam

Configuration for Parameter for extended memory used by LSN and Subscriber Store resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
memlimit	<Integer>	Read-write	Amount of NetScaler memory to reserve for the memory used by LSN and Subscriber Session Store feature, in multiples of 2MB. Note: If you later reduce the value of this parameter, the amount of active memory is not reduced. Changing the configured memory limit can only increase the amount of active memory.
memlimitactive	<Integer>	Read-only	The active memory limit for extendedmemory on the system. Active memory limit could be different from configured memory limit. This could happen when memory limit could

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			not be increased due to unavailability, or could not be decreased as it is already in use. This active memory limit configures the current memory limit for LSN and Subscriber Session Store.
maxmemlimit	<Integer>	Read-only	The maximum value of memory limit for extendedmemory on the system. Actual available memory may be less. This is maximum memory that can be utilized by LSN and Subscriber Session Store modules.
minrequiredmemory	<Integer>	Read-only	The minimum memory requirement for extendedmemory. This is minimum memory required for LSN and Subscriber Session Store Modules.
_nextgenapiresource	<String>	Read-only	.

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/extendedmemoryparam **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"extendedmemoryparam":{

"memlimit":<Integer_value>
```

```
}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/extendedmemoryparam? **action=unset HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"extendedmemoryparam":{

"memlimit":true

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/extendedmemoryparam **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "extendedmemoryparam": [ {

"memlimitactive":<Integer_value>,

"maxmemlimit":<Integer_value>,

"memlimit":<Integer_value>,

"minrequiredmemory":<Integer_value>,

"_nextgenapiresource":<String_value>

}]}
```

location

Configuration for location resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ipfrom	<String>	Read-write	First IP address in the range, in dotted decimal notation. Minimum length = 1
ipto	<String>	Read-write	Last IP address in the range, in dotted decimal notation. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
preferredlocation	<String>	Read-write	String of qualifiers, in dotted notation, describing the geographical location of the IP address range. Each qualifier is more specific than the one that precedes it, as in continent.country.region.city.isp.organization. For example, "NA.US.CA.San Jose.ATT.citrix". Note: A qualifier that includes a dot (.) or space ( ) must be enclosed in double quotation marks. Minimum length = 1
longitude	<Integer>	Read-write	Numerical value, in degrees, specifying the longitude of the geographical location of the IP address-range. Note: Longitude and latitude parameters are used for selecting a service with the static proximity GSLB method. If they are not specified, selection is based on the qualifiers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			specified for the location. Minimum value = -180 Maximum value = 180
latitude	<Integer>	Read-write	Numerical value, in degrees, specifying the latitude of the geographical location of the IP address-range. Note: Longitude and latitude parameters are used for selecting a service with the static proximity GSLB method. If they are not specified, selection is based on the qualifiers specified for the location. Minimum value = -90 Maximum value = 90
q1label	<String>	Read-only	Least specific location qualifier.
q2label	<String>	Read-only	Location qualifier 2.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
q3label	<String>	Read-only	Location qualifier 3.
q4label	<String>	Read-only	Location qualifier 4.
q5label	<String>	Read-only	Location qualifier 5.
q6label	<String>	Read-only	Most specific location qualifier.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

locationparameter

Configuration for location parameter resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
context	<String>	Read-write	Context for describing locations. In geographic context, qualifier labels are assigned by default in the following sequence: Continent.Country.Region.City.ISP.Organization. In custom context, the qualifiers labels can have any meaning that you designate. Possible values = geographic, custom
q1label	<String>	Read-write	Label specifying the meaning of the first qualifier. Can be specified for custom context only. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
q2label	<String>	Read-write	Label specifying the meaning of the second qualifier. Can be specified for custom context only. Minimum length = 1
q3label	<String>	Read-write	Label specifying the meaning of the third qualifier. Can be specified for custom context only. Minimum length = 1
q4label	<String>	Read-write	Label specifying the meaning of the fourth qualifier. Can be specified for custom context only. Minimum length = 1
q5label	<String>	Read-write	Label specifying the meaning of the fifth qualifier. Can be specified for custom context only. Minimum length = 1
q6label	<String>	Read-write	Label specifying the meaning of the sixth qualifier. Can be specified for custom context only. Minimum length = 1
matchwildcardtoany	<String>	Read-write	Indicates whether wildcard qualifiers should match any other

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			qualifier including non-wildcard while evaluating location based expressions. Possible values: Yes, No, Expression. Yes - Wildcard qualifiers match any other qualifiers. No - Wildcard qualifiers do not match non-wildcard qualifiers, but match other wildcard qualifiers. Expression - Wildcard qualifiers in an expression match any qualifier in an LDNS location, wildcard qualifiers in the LDNS location do not match non-wildcard qualifiers in an expression.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: NO Possible values = YES, NO, Expression
Locationfile	<String>	Read-only	Currently loaded location database file.
format	<String>	Read-only	Location file format. Possible values = netscaler, ip-country, ip-country-isp, ip-country-region-city, ip-country-region-city-isp, geoip-country, geoip-region, geoip-city, geoip-country-org, geoip-country-isp, geoip-city-isp-org
custom	<Integer>	Read-only	Number of configured custom locations.
Static	<Integer>	Read-only	Number of configured locations in the database file (static locations).
lines	<Integer>	Read-only	Number of lines in the databse files.
errors	<Integer>	Read-only	Number of errros encountered while

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			reading the database file.
warnings	<Integer>	Read-only	Number of warnings encountered while reading the database file.
entries	<Integer>	Read-only	Number of successfully added entries.
locationfile6	<String>	Read-only	Currently loaded location database file.
format6	<String>	Read-only	Location file format. Possible values = netscaler6, geoip-country6
custom6	<Integer>	Read-only	Number of configured custom locations.
static6	<Integer>	Read-only	Number of configured locations in the database file (static locations).
lines6	<Integer>	Read-only	Number of lines in the databse files.
errors6	<Integer>	Read-only	Number of errros encountered while reading the database file.
warnings6	<Integer>	Read-only	Number of warnings encountered while

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			reading the database file.
entries6	<Integer>	Read-only	Number of successfully added entries.
flags	<Integer>	Read-only	Information needed for display. This argument passes information from the kernel to the user space.
status	<Integer>	Read-only	This argument displays when the status (success or failure) of database loading.
databasemode	<String>	Read-only	This argument displays the database mode. Possible values = File, Internal, Not applicable
flushing	<String>	Read-only	This argument displays the state of flushing. Possible values = In progress, Idle
loading	<String>	Read-only	This argument displays the state of loading. Possible values = In progress, Idle
builtin	<String[]>	Read-only	.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.

Operations

(click to see Properties)

- UPDATE
- UNSET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/locationparameter **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"locationparameter":{

"context":<String_value>,

"q1label":<String_value>,

"q2label":<String_value>,

"q3label":<String_value>,

"q4label":<String_value>,

"q5label":<String_value>,

"q6label":<String_value>,

"matchwildcardtoany":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/locationparameter? **action=unset HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"locationparameter":{

mcpprofile

Configuration for mcpProfile resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the mcp profile. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my mcp profile").
proxymode	<String>	Read-write	Proxy mode for the MCP profile. FORWARD mode replaces Host and URL in backend requests. REVERSE mode passes requests as-is.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: FORWARD Possible values = FORWARD, REVERSE
profiletype	<String>	Read-write	Type of MCP profile. Frontend profiles apply to the entity that receives requests from a client. Backend profiles apply to the entity that sends client requests to a server. Default value: BACKEND Possible values = BACKEND, FRONTEND
hostreplacement	<String>	Read-write	Whether the Host header should be replaced with the backend MCP server FQDN in FORWARD proxy mode. If mcpProxyMode is FORWARD, this parameter is ENABLED bydefault. If mcpProxyMode is REVERSE, this parameter is DISABLED and cannot be ENABLED.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ENABLED, DISABLED
urlreplacement	<String>	Read-write	Whether the URL should be replaced with the backend MCP server URL in FORWARD proxy mode. If mcpProxyMode is FORWARD, this parameter is ENABLED bydefault. If mcpProxyMode is REVERSE, this parameter is DISABLED and cannot be ENABLED. Possible values = ENABLED, DISABLED
protocolversion	<String>	Read-write	MCP protocol version to advertise during monitoring of a mcp server.
tokenorapi	<String>	Read-write	If you like to insert Bearer or API token, configure this parameter with full header.
comment	<String>	Read-write	Any information about the MCP profile.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
insertheaderinclientrequest	<String>	Read-write	Whether mcp_token_or_api configuration will be used for MCP requests coming from client. Default value: DISABLED Possible values = ENABLED, DISABLED
newname	<String>	Read-write	New name for the mcpProfile. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Minimum length = 1
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			example = CONNECTION.TRAFFIC_DOMAIN_ID.EQ(0) eg: start nstrace -filter "CONNECTION.SRCIP.EQ(127.0.0.1) || (CONNECTION.SVCNAME.NE("s1") ;; CONNECTION.SRCPORT.EQ(80))" The filter expression should be given in double quotes. common use cases: Trace capturing full sized traffic from/to ip 10.102.44.111, excluding loopback traffic start nstrace -size 0 -filter "CONNECTION.IP.NE(127.0.0.1) ;; CONNECTION.IP.EQ(10.102.44.111)" Trace capturing all traffic to (terminating at) port 80 or 443

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			start nstrace -size 0 -filter "CONNECTION.DSTPORT.EQ(443) || CONNECTION.DSTPORT.EQ(80)" Trace capturing all backend traffic specific to service service1 along with corresponding client side traffic start nstrace -size 0 -filter "CONNECTION.SVCNAME.EQ("service1")" -link ENABLED Trace capturing all traffic through NetScaler interface 1/1 start nstrace -filter "CONNECTION.INTF.EQ("1/1")" Trace capturing all traffic specific through vlan 2 start nstrace -filter "CONNECTION.VLANID.EQ(2)"

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Trace capturing all frontend (client side) traffic specific to lb vserver vserver1 along with corresponding server side traffic start nstrace -size 0 -filter "CONNECTION.LB_VSERVER.NAME.EQ("vserver1")" -link ENABLED .
link	<String>	Read-write	Includes filtered connection's peer traffic. Default value: DISABLED Possible values = ENABLED, DISABLED
nodes	<Integer[]>	Read-write	Nodes on which tracing is started. Minimum value = 0 Maximum value = 32
filesize	<Integer>	Read-write	File size, in MB, treshold for rollover. If free disk space is less than 2GB at the time of rollover, trace will stop

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			. Default value: 1024 Minimum value = 0 Maximum value = 10240
traceformat	<String>	Read-write	Format in which trace will be generated . Default value: 0 Possible values = NSCAP, PCAP
merge	<String>	Read-write	Specify how traces across PE's are merged . Default value: 0 Possible values = ONSTOP, ONTHEFLY, NOMERGE
doruntimecleanup	<String>	Read-write	Enable or disable runtime temp file cleanup. Default value: ENABLED Possible values = ENABLED, DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tracebuffers	<Integer>	Read-write	Number of 16KB trace buffers. Default value: 5000 Minimum value = 1000
skiprpc	<String>	Read-write	skip RPC packets. Default value: DISABLED Possible values = ENABLED, DISABLED
skiplocalssh	<String>	Read-write	skip local SSH packets. Default value: DISABLED Possible values = ENABLED, DISABLED
capsslkeys	<String>	Read-write	Capture SSL Master keys. Master keys will not be captured on FIPS machine. Warning: The captured keys can be used to decrypt information that may be confidential. The captured key files have to be stored in a secure environment.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: DISABLED Possible values = ENABLED, DISABLED
capdroppkt	<String>	Read-write	Captures Dropped Packets if set to ENABLED. Default value: DISABLED Possible values = ENABLED, DISABLED
inmemorytrace	<String>	Read-write	Logs packets in appliance's memory and dumps the trace file on stopping the nstrace operation. Default value: DISABLED Possible values = ENABLED, DISABLED
nodeid	<Integer>	Read-write	Unique number that identifies the cluster node. Minimum value = 0 Maximum value = 31
state	<String>	Read-only	Current running state of trace.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: 0 Possible values = RUNNING, STOPPED
scope	<String>	Read-only	Scope of started trace, local or cluster level. Default value: 0 Possible values = CLUSTER, LOCAL
tracelocation	<String>	Read-only	Directory where current trace files are saved.
_nextgenapiresource	<String>	Read-only	.

Operations

(click to see Properties)

- START
- STOP
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

START

URL: http:// <netscaler-ip-address> /nitro/v1/config/nstrace? **action=start HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"nstrace":{

"nf":<Integer_value>,

"time":<Integer_value>,

"size":<Integer_value>,

"mode":<String[]_value>,

"pernic":<String_value>,

"filename":<String_value>,

"fileid":<String_value>,

"filter":<String_value>,
```

```
"link":<String_value>,

"nodes":<Integer[]_value>,

"filesize":<Integer_value>,

"traceformat":<String_value>,

"merge":<String_value>,

"doruntimecleanup":<String_value>,

radiusnode

Configuration for RADIUS Node resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
nodeprefix	<String>	Read-write	IP address/IP prefix of radius node in CIDR format.
radkey	<String>	Read-write	The key shared between the RADIUS server and clients. Required for NetScaler to communicate with the RADIUS nodes.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/radiusnode **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"radiusnode":{

<b>"nodeprefix":<String_value>,

</b><b>"radkey":<String_value>

</b>}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/radiusnode **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"radiusnode":{

<b>"nodeprefix":<String_value>,

</b>"radkey":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/radiusnode/ nodeprefix_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/radiusnode **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/radiusnode? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/radiusnode? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of radiusnode resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/radiusnode? **view=summary**

Use this query-parameter to get the summary output of radiusnode resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/radiusnode? **pagesize=#no;pageno=#no**

Use this query-parameter to get the radiusnode resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "radiusnode": [ {

"nodeprefix":<String_value>,

"radkey":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/radiusnode/ nodeprefix_value<String> **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/radiusnode/ nodeprefix_value<String> ? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

view http:// <netscaler-ip-address> /nitro/v1/config/radiusnode/ nodeprefix_value<String> ? **view=summary**

Use this query-parameter to get the summary output of radiusnode resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "radiusnode": [ {

"nodeprefix":<String_value>,

"radkey":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/radiusnode? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "radiusnode": [ { "__count": "#no"} ] }
```

server

Configuration for server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the server. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Can be changed after the name is created. Minimum length = 1
ipaddress	<String>	Read-write	IPv4 or IPv6 address of the server. If you create an IP address based server, you can specify the name of the server, instead of its IP address, when creating a service. Note: If you do not create a server entry, the server IP address that you enter when you create a service becomes the name of the server.
domain	<String>	Read-write	Domain name of the server. For a domain

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			based configuration, you must create the server first. Minimum length = 1
translationip	<String>	Read-write	IP address used to transform the server's DNS-resolved IP address.
translationmask	<String>	Read-write	The netmask of the translation ip.
domainresolveretry	<Integer>	Read-write	Time, in seconds, for which the NetScaler must wait, after DNS resolution fails, before sending the next DNS query to resolve the domain name. Default value: 5 Minimum value = 5 Maximum value = 20939
state	<String>	Read-write	Initial state of the server. Default value: ENABLED Possible values = ENABLED, DISABLED
ipv6address	<String>	Read-write	Support IPv6 addressing mode. If you configure a server with the IPv6

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			addressing mode, you cannot use the server in the IPv4 addressing mode. Default value: NO Possible values = YES, NO
comment	<String>	Read-write	Any information about the server.
td	<Integer>	Read-write	Integer value that uniquely identifies the traffic domain in which you want to configure the entity. If you do not specify an ID, the entity becomes part of the default traffic domain, which has an ID of 0. Minimum value = 0 Maximum value = 4094
querytype	<String>	Read-write	Specify the type of DNS resolution to be done on the configured domain to get the backend services. Valid query types are A, AAAA and SRV with A being the default querytype. The type of DNS resolution done on the domains in SRV records is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			inherited from ipv6 argument. Default value: A Possible values = A, AAAA, SRV
domainresolvenow	<Boolean>	Read-write	Immediately send a DNS query to resolve the server's domain name.
delay	<Integer>	Read-write	Time, in seconds, after which all the services configured on the server are disabled.
graceful	<String>	Read-write	Shut down gracefully, without accepting any new connections, and disabling each service when all of its connections are closed. Default value: NO Possible values = YES, NO
Internal	<Boolean>	Read-write	Display names of the servers that have been created for internal use.
newname	<String>	Read-write	New name for the server. Must begin with an ASCII alphabetic or underscore (_)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Minimum length = 1
statechangetimesec	<String>	Read-only	Time when last state change happened. Seconds part.
tickssincelaststatechange	<Integer>	Read-only	Time in 10 millisecond ticks since the last state change.
autoscale	<String>	Read-only	Auto scale option for a servicegroup. Default value: DISABLED Possible values = DISABLED, DNS, POLICY, CLOUD, API
usip	<String>	Read-only	Use the client's IP address as the source IP address when initiating a connection to the server. When creating a service, if you do not set this parameter, the service inherits the global Use Source IP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			setting (available in the enable ns mode and disable ns mode CLI commands, or in the System > Settings > Configure modes > Configure Modes dialog box). However, you can override this setting after you create the service. Possible values = YES, NO
cka	<String>	Read-only	Enable client keep-alive for the service group. Possible values = YES, NO
tcpb	<String>	Read-only	Enable TCP buffering for the service group. Possible values = YES, NO
cmp	<String>	Read-only	Enable compression for the specified service. Possible values = YES, NO
cacheable	<String>	Read-only	Use the transparent cache redirection virtual server to forward the request to the cache server. Default value: NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
sp	<String>	Read-only	Enable surge protection for the service group. Default value: OFF Possible values = ON, OFF
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

```

server_binding

Binding object which returns the resources bound to server.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the server for which to display parameters. Minimum length = 1
server_servicegroup_binding	<server_servicegroup_binding[]>	Read-only	servicegroup that can be bound to server.
server_gslbservice_binding	<server_gslbservice_binding[]>	Read-only	gslbservice that can be bound to server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
server_gslbservicegroup_binding	<server_gslbservicegroup_binding[]>	Read-only	gslbservicegroup that can be bound to server.
server_service_binding	<server_service_binding[]>	Read-only	service that can be bound to server.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/server_binding/ name_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "server_binding": [ {

"name":<String_value>,

"server_gslbservice_binding":<server_gslbservice_binding[]_value>,

"server_service_binding":<server_service_binding[]_value>,

"server_servicegroup_binding":<server_servicegroup_binding[]_value>,

"server_gslbservicegroup_binding":<server_gslbservicegroup_binding[]_value
>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/server_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/server_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "server_binding": [ {

"name":<String_value>,

"server_gslbservice_binding":<server_gslbservice_binding[]_value>,

"server_service_binding":<server_service_binding[]_value>,

"server_servicegroup_binding":<server_servicegroup_binding[]_value>,

"server_gslbservicegroup_binding":<server_gslbservicegroup_binding[]_value
>

}]}
```

server_gslbservice_binding

Binding object showing the gslbservice that can be bound to server.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicename	<String>	Read-write	The services attatched to the server.
name	<String>	Read-write	Name of the server for which to display parameters. Minimum length = 1
svctype	<String>	Read-only	The type of bound service. Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, RPCSVR, DNS, ADNS, SNMP, RTSP, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP, ADNS_TCP, MYSQL, MSSQL, ORACLE, MONGO, MONGO_TLS, RADIUS, RADIUSListener, RDP, DIAMETER, SSL_DIAMETER, TFTP, SMPP, PPTP, GRE, SYSLOGTCP, SYSLOGUDP, FIX, SSL_FIX, USER_TCP, USER_SSL_TCP, QUIC, IPFIX,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			LOGSTREAM, LOGSTREAM_SSL, MQTT, MQTT_TLS, QUIC_BRIDGE, DOT, ADNS_DOT, HTTP_QUIC, ADNS_DOH, KAFKA_BROKER
port	<Integer>	Read-only	The port number to be used for the bound service. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
serviceipaddress	<String>	Read-only	The IP address of the bound service.
serviceipstr	<String>	Read-only	This field has been intorduced to show the dbs services ip.
svrstate	<String>	Read-only	The state of the bound service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Unknown, DISABLED
__count	<Double>	Read-only	count parameter

- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/server_gslbservice_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ server_gslbservice_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of server_gslbservice_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/server_gslbservice_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the server_gslbservice_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "server_gslbservice_binding": [ {

"servicename":<String_value>,

"name":<String_value>,

"svctype":<String_value>,

"port":<Integer_value>,

"serviceipaddress":<String_value>,
```

```
"serviceipstr":<String_value>,

"svrstate":<String_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/server_gslbservice_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/server_gslbservice_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "server_gslbservice_binding": [ {

"servicename":<String_value>,

"name":<String_value>,

"svctype":<String_value>,
```

```
"port":<Integer_value>,

"serviceipaddress":<String_value>,

"serviceipstr":<String_value>,

"svrstate":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/server_gslbservice_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"server_gslbservice_binding": [ { "__count": "#no"} ] }
```

server_gslbservicegroup_binding

Binding object showing the gslbservicegroup that can be bound to server.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the server for which to display parameters. Minimum length = 1
servicegroupname	<String>	Read-write	servicegroups bind to this server.
dup_svctype	<String>	Read-only	service type of the service. Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, RPCSVR, DNS, ADNS, SNMP, RTSP, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP, ADNS_TCP, MYSQL, MSSQL, ORACLE, MONGO, MONGO_TLS, RADIUS, RADIUSListener, RDP, DIAMETER, SSL_DIAMETER, TFTP, SMPP, PPTP, GRE, SYSLOGTCP, SYSLOGUDP, FIX, SSL_FIX, USER_TCP, USER_SSL_TCP, QUIC, IPFIX, LOGSTREAM,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			LOGSTREAM_SSL, MQTT, MQTT_TLS, QUIC_BRIDGE, DOT, ADNS_DOT, HTTP_QUIC, ADNS_DOH, KAFKA_BROKER
monthreshold	<Integer>	Read-only	Minimum sum of weights of the monitors that are bound to this service. Used to determine whether to mark a service as UP or DOWN. Minimum value = 0 Maximum value = 65535
clttimeout	<Integer>	Read-only	Time, in seconds, after which to terminate an idle client connection. Minimum value = 0 Maximum value = 31536000
cipheader	<String>	Read-only	Name of the HTTP header whose value must be set to the IP address of the client. Used with the Client IP parameter. If client IP insertion is enabled, and the client IP header is not specified, the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			value of Client IP Header parameter or the value set by the set ns config command is used as client's IP header name. Minimum length = 1
maxbandwidth	<Integer>	Read-only	Maximum bandwidth, in Kbps, allocated for all the services in the service group. Minimum value = 0 Maximum value = 4294967287
customserverid	<String>	Read-only	A positive integer to identify the service. Used when the persistency type is set to Custom Server ID. Default value: "None"
dup_port	<Integer>	Read-only	port of the service. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
cip	<String>	Read-only	Before forwarding a request to the service, insert an HTTP header with the client's IPv4 or IPv6 address as its

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			value. Used if the server needs the client's IP address for security, accounting, or other purposes, and setting the Use Source IP parameter is not a viable option. Possible values = ENABLED, DISABLED
svctype	<String>	Read-only	The type of bound service. Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, RPCSVR, DNS, ADNS, SNMP, RTSP, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP, ADNS_TCP, MYSQL, MSSQL, ORACLE, MONGO, MONGO_TLS, RADIUS, RADIUSListener, RDP, DIAMETER, SSL_DIAMETER, TFTP, SMPP, PPTP, GRE, SYSLOGTCP, SYSLOGUDP, FIX,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			SSL_FIX, USER_TCP, USER_SSL_TCP, QUIC, IPFIX, LOGSTREAM, LOGSTREAM_SSL, MQTT, MQTT_TLS, QUIC_BRIDGE, DOT, ADNS_DOT, HTTP_QUIC, ADNS_DOH, KAFKA_BROKER
port	<Integer>	Read-only	The port number to be used for the bound service. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
serviceipstr	<String>	Read-only	This field has been intorduced to show the dbs services ip.
boundtd	<Integer>	Read-only	Integer value that uniquely identifies the traffic domain in which you want to configure the entity. If you do not specify an ID, the entity becomes part of the default traffic domain, which has an ID of 0.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 0 Maximum value = 4094
serviceipaddress	<String>	Read-only	The IP address of the bound service.
downstateflush	<String>	Read-only	Perform delayed clean-up of connections to all services in the service group. Default value: ENABLED Possible values = ENABLED, DISABLED
svrcfgflags	<Integer>	Read-only	service flags to denote its a db enabled.
maxclient	<Integer>	Read-only	Maximum number of simultaneous open connections for the service group. Minimum value = 0 Maximum value = 4294967294
maxreq	<Integer>	Read-only	Maximum number of requests that can be sent on a persistent connection to the service group. Note: Connection requests beyond this value are rejected.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 0 Maximum value = 65535
appflowlog	<String>	Read-only	Enable logging of AppFlow information for the specified service group. Default value: ENABLED Possible values = ENABLED, DISABLED
svrstate	<String>	Read-only	The state of the bound service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
svrtimeout	<Integer>	Read-only	Time, in seconds, after which to terminate an idle server connection. Minimum value = 0 Maximum value = 31536000

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-only	count parameter

server_servicegroup_binding

Binding object showing the servicegroup that can be bound to server.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the server for which to display parameters. Minimum length = 1
servicegroupname	<String>	Read-write	servicegroups bind to this server.
svrtimeout	<Integer>	Read-only	Time, in seconds, after which to terminate an idle server connection. Minimum value = 0 Maximum value = 31536000
appflowlog	<String>	Read-only	Enable logging of AppFlow information for the specified service group. Default value: ENABLED Possible values = ENABLED, DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
maxreq	<Integer>	Read-only	Maximum number of requests that can be sent on a persistent connection to the service group. Note: Connection requests beyond this value are rejected. Minimum value = 0 Maximum value = 65535
svcitmboundsvcs	<Integer>	Read-only	Indicates the total number of bound IPs for the SRV target FQDN.
svrstate	<String>	Read-only	The state of the bound service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
usip	<String>	Read-only	Use the client's IP address as the source IP address when initiating a connection to the server. When creating a service, if

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			you do not set this parameter, the service inherits the global Use Source IP setting (available in the enable ns mode and disable ns mode CLI commands, or in the System > Settings > Configure modes > Configure Modes dialog box). However, you can override this setting after you create the service. Possible values = YES, NO
maxclient	<Integer>	Read-only	Maximum number of simultaneous open connections for the service group. Minimum value = 0 Maximum value = 4294967294
svrcfgflags	<Integer>	Read-only	service flags to denote its a db enabled.
svcitmactsvcs	<Integer>	Read-only	Indicates the total number of active IPs for SRV target FQDN.
tcpb	<String>	Read-only	Enable TCP buffering for the service group.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
sp	<String>	Read-only	Enable surge protection for the service group. Default value: OFF Possible values = ON, OFF
downstateflush	<String>	Read-only	Perform delayed clean-up of connections to all services in the service group. Default value: ENABLED Possible values = ENABLED, DISABLED
weight	<Integer>	Read-only	Indicates the weight of bound IPs.
svcitmpriority	<Integer>	Read-only	Indicates the Priority of the SRV target FQDN.
serviceipaddress	<String>	Read-only	The IP address of the bound service.
serviceipstr	<String>	Read-only	This field has been intorduced to show the dbs services ip.
boundtd	<Integer>	Read-only	Integer value that uniquely identifies the traffic domain in which you want to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			configure the entity. If you do not specify an ID, the entity becomes part of the default traffic domain, which has an ID of 0. Minimum value = 0 Maximum value = 4094
port	<Integer>	Read-only	The port number to be used for the bound service. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
servicegroupentname2	<String>	Read-only	Used for show server of SRV type to indicate target FQDNs.
svctype	<String>	Read-only	The type of bound service. Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, RPCSVR, DNS, ADNS, SNMP, RTSP, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			DNS_TCP, ADNS_TCP, MYSQL, MSSQL, ORACLE, MONGO, MONGO_TLS, RADIUS, RADIUSListener, RDP, DIAMETER, SSL_DIAMETER, TFTP, SMPP, PPTP, GRE, SYSLOGTCP, SYSLOGUDP, FIX, SSL_FIX, USER_TCP, USER_SSL_TCP, QUIC, IPFIX, LOGSTREAM, LOGSTREAM_SSL, MQTT, MQTT_TLS, QUIC_BRIDGE, DOT, ADNS_DOT, HTTP_QUIC, ADNS_DOH, KAFKA_BROKER
cmp	<String>	Read-only	Enable compression for the specified service. Possible values = YES, NO
dup_port	<Integer>	Read-only	port of the service. Range 1 - 65535 * in CLI is represented as

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			65535 in NITRO API
cip	<String>	Read-only	Before forwarding a request to the service, insert an HTTP header with the client's IPv4 or IPv6 address as its value. Used if the server needs the client's IP address for security, accounting, or other purposes, and setting the Use Source IP parameter is not a viable option. Possible values = ENABLED, DISABLED
customserverid	<String>	Read-only	A positive integer to identify the service. Used when the persistency type is set to Custom Server ID. Default value: "None"
maxbandwidth	<Integer>	Read-only	Maximum bandwidth, in Kbps, allocated for all the services in the service group. Minimum value = 0 Maximum value = 4294967287

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cka	<String>	Read-only	Enable client keep-alive for the service group. Possible values = YES, NO
cipheader	<String>	Read-only	Name of the HTTP header whose value must be set to the IP address of the client. Used with the Client IP parameter. If client IP insertion is enabled, and the client IP header is not specified, the value of Client IP Header parameter or the value set by the set ns config command is used as client's IP header name. Minimum length = 1
cacheable	<String>	Read-only	Use the transparent cache redirection virtual server to forward the request to the cache server. Default value: NO Possible values = YES, NO
monthreshold	<Integer>	Read-only	Minimum sum of weights of the monitors that are bound to this service. Used to determine

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			whether to mark a service as UP or DOWN. Minimum value = 0 Maximum value = 65535
clttimeout	<Integer>	Read-only	Time, in seconds, after which to terminate an idle client connection. Minimum value = 0 Maximum value = 31536000
dup_svctype	<String>	Read-only	service type of the service. Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, RPCSVR, DNS, ADNS, SNMP, RTSP, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP, ADNS_TCP, MYSQL, MSSQL, ORACLE, MONGO, MONGO_TLS, RADIUS, RADIUSListener, RDP, DIAMETER, SSL_DIAMETER,

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/server_servicegroup_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ server_servicegroup_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of server_servicegroup_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/server_servicegroup_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the server_servicegroup_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "server_servicegroup_binding": [ {

"name":<String_value>,

"servicegroupname":<String_value>,

"svrtimeout":<Integer_value>,

```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/server_servicegroup_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/ server_servicegroup_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/server_servicegroup_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"server_servicegroup_binding": [ { "__count": "#no"} ] }
```

service

Configuration for service resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the service. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after the service has been created. Minimum length = 1
ip	<String>	Read-write	IP to assign to the service. Minimum length = 1
servername	<String>	Read-write	Name of the server that hosts the service. Minimum length = 1
servicetype	<String>	Read-write	Protocol in which data is exchanged with the service. Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, RPCSVR, DNS, ADNS, SNMP, RTSP, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP, ADNS_TCP, MYSQL, MSSQL, ORACLE, MONGO, MONGO_TLS, RADIUS,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			RADIUSListener, RDP, DIAMETER, SSL_DIAMETER, TFTP, SMPP, PPTP, GRE, SYSLOGTCP, SYSLOGUDP, FIX, SSL_FIX, USER_TCP, USER_SSL_TCP, QUIC, IPFIX, LOGSTREAM, LOGSTREAM_SSL, MQTT, MQTT_TLS, QUIC_BRIDGE, DOT, ADNS_DOT, HTTP_QUIC, ADNS_DOH, KAFKA_BROKER
port	<Integer>	Read-write	Port number of the service. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
cleartextport	<Integer>	Read-write	Port to which clear text data must be sent after the appliance decrypts incoming SSL traffic. Applicable to transparent SSL services. Minimum value = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachetype	<String>	Read-write	Cache type supported by the cache server. Possible values = TRANSPARENT, REVERSE, FORWARD
maxclient	<Integer>	Read-write	Maximum number of simultaneous open connections to the service. Minimum value = 0 Maximum value = 4294967294
healthmonitor	<String>	Read-write	Monitor the health of this service. Available settings function as follows: YES - Send probes to check the health of the service. NO - Do not send probes to check the health of the service. With the NO option, the appliance shows the service as UP at all times. Default value: YES Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
maxreq	<Integer>	Read-write	Maximum number of requests that can be sent on a persistent connection to the service. Note: Connection requests beyond this value are rejected. Minimum value = 0 Maximum value = 65535
cacheable	<String>	Read-write	Use the transparent cache redirection virtual server to forward requests to the cache server. Note: Do not specify this parameter if you set the Cache Type parameter. Default value: NO Possible values = YES, NO
cip	<String>	Read-write	Before forwarding a request to the service, insert an HTTP header with the client's IPv4 or IPv6 address as its value. Used if the server needs the client's IP address for security,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			accounting, or other purposes, and setting the Use Source IP parameter is not a viable option. Possible values = ENABLED, DISABLED
cipheader	<String>	Read-write	Name for the HTTP header whose value must be set to the IP address of the client. Used with the Client IP parameter. If you set the Client IP parameter, and you do not specify a name for the header, the appliance uses the header name specified for the global Client IP Header parameter (the cipHeader parameter in the set ns param CLI command or the Client IP Header parameter in the Configure HTTP Parameters dialog box at System > Settings > Change HTTP parameters). If the global Client IP Header parameter is not specified, the appliance inserts a

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			header with the name "client-ip.". Minimum length = 1
usip	<String>	Read-write	Use the client's IP address as the source IP address when initiating a connection to the server. When creating a service, if you do not set this parameter, the service inherits the global Use Source IP setting (available in the enable ns mode and disable ns mode CLI commands, or in the System > Settings > Configure modes > Configure Modes dialog box). However, you can override this setting after you create the service. Possible values = YES, NO
pathmonitor	<String>	Read-write	Path monitoring for clustering. Possible values = YES, NO
pathmonitorindv	<String>	Read-write	Individual Path monitoring decisions. Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
useproxyport	<String>	Read-write	Use the proxy port as the source port when initiating connections with the server. With the NO setting, the client-side connection port is used as the source port for the server-side connection. Note: This parameter is available only when the Use Source IP (USIP) parameter is set to YES. Possible values = YES, NO
sp	<String>	Read-write	Enable surge protection for the service. Possible values = ON, OFF
rtspsessionidremap	<String>	Read-write	Enable RTSP session ID mapping for the service. Default value: OFF Possible values = ON, OFF
clttimeout	<Integer>	Read-write	Time, in seconds, after which to terminate an idle client connection.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 0 Maximum value = 31536000
svrtimeout	<Integer>	Read-write	Time, in seconds, after which to terminate an idle server connection. Minimum value = 0 Maximum value = 31536000
customserverid	<String>	Read-write	Unique identifier for the service. Used when the persistency type for the virtual server is set to Custom Server ID. Default value: "None"
serverid	<Integer>	Read-write	The identifier for the service. This is used when the persistency type is set to Custom Server ID.
cka	<String>	Read-write	Enable client keep-alive for the service. Possible values = YES, NO
tcpb	<String>	Read-write	Enable TCP buffering for the service. Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cmp	<String>	Read-write	Enable compression for the service. Possible values = YES, NO
maxbandwidth	<Integer>	Read-write	Maximum bandwidth, in Kbps, allocated to the service. Minimum value = 0 Maximum value = 4294967287
accessdown	<String>	Read-write	Use Layer 2 mode to bridge the packets sent to this service if it is marked as DOWN. If the service is DOWN, and this parameter is disabled, the packets are dropped. Default value: NO Possible values = YES, NO
monthreshold	<Integer>	Read-write	Minimum sum of weights of the monitors that are bound to this service. Used to determine whether to mark a service as UP or DOWN. Minimum value = 0 Maximum value = 65535

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
state	<String>	Read-write	Initial state of the service. Default value: ENABLED Possible values = ENABLED, DISABLED
downstateflush	<String>	Read-write	Flush all active transactions associated with a service whose state transitions from UP to DOWN. Do not enable this option for applications that must complete their transactions. Default value: ENABLED Possible values = ENABLED, DISABLED
tcpprofilename	<String>	Read-write	Name of the TCP profile that contains TCP configuration settings for the service. Minimum length = 1 Maximum length = 127
httpprofilename	<String>	Read-write	Name of the HTTP profile that contains HTTP configuration

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			settings for the service. Minimum length = 1 Maximum length = 127
contentinspectionprofilename	<String>	Read-write	Name of the ContentInspection profile that contains IPS/IDS communication related setting for the service. Minimum length = 1 Maximum length = 127
aigwprofilename	<String>	Read-write	Name of the AIGW Profile that contains AIGW Endpoint setting for the service. Minimum length = 1 Maximum length = 255
quicprofilename	<String>	Read-write	Name of QUIC profile which will be attached to the service. Minimum length = 1 Maximum length = 255
hashid	<Integer>	Read-write	A numerical identifier that can be used by hash based load

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			balancing methods. Must be unique for each service. Minimum value = 1
comment	<String>	Read-write	Any information about the service.
appflowlog	<String>	Read-write	Enable logging of AppFlow information. Default value: ENABLED Possible values = ENABLED, DISABLED
netprofile	<String>	Read-write	Network profile to use for the service. Minimum length = 1 Maximum length = 127
td	<Integer>	Read-write	Integer value that uniquely identifies the traffic domain in which you want to configure the entity. If you do not specify an ID, the entity becomes part of the default traffic domain, which has an ID of 0. Minimum value = 0 Maximum value = 4094

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
processlocal	<String>	Read-write	By turning on this option packets destined to a service in a cluster will not under go any steering. Turn this option for single packet request response mode or when the upstream device is performing a proper RSS for connection based distribution. Default value: DISABLED Possible values = ENABLED, DISABLED
dnsprofilename	<String>	Read-write	Name of the DNS profile to be associated with the service. DNS profile properties will applied to the transactions processed by a service. This parameter is valid only for ADNS, ADNS-TCP and ADNS-DOT services. Minimum length = 1 Maximum length = 127

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
monconnectionclose	<String>	Read-write	Close monitoring connections by sending the service a connection termination message with the specified bit set. Default value: NONE Possible values = RESET, FIN
mcpprofilename	<String>	Read-write	Name of MCP profile which will be attached to the service.
ipaddress	<String>	Read-write	The new IP address of the service.
weight	<Integer>	Read-write	Weight to assign to the monitor-service binding. When a monitor is UP, the weight assigned to its binding with the service determines how much the monitor contributes toward keeping the health of the service above the value configured for the Monitor Threshold parameter. Minimum value = 1 Maximum value = 100

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
monitor_name_svc	<String>	Read-write	Name of the monitor bound to the specified service. Minimum length = 1
delay	<Integer>	Read-write	Time, in seconds, allocated to the NetScaler for a graceful shutdown of the service. During this period, new requests are sent to the service only for clients who already have persistent sessions on the appliance. Requests from new clients are load balanced among other available services. After the delay time expires, no requests are sent to the service, and the service is marked as unavailable (OUT OF SERVICE).
graceful	<String>	Read-write	Shut down gracefully, not accepting any new connections, and disabling the service when all of its connections are closed. Default value: NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
all	<Boolean>	Read-write	Display both user-configured and dynamically learned services.
Internal	<Boolean>	Read-write	Display only dynamically learned services.
newname	<String>	Read-write	New name for the service. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Minimum length = 1
numofconnections	<Integer>	Read-only	This will tell the number of client side connections are still open.
policyname	<String>	Read-only	The name of the policyname for which this service is bound.
serviceconftype	<Boolean>	Read-only	The configuration type of the service.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
serviceconftype2	<String>	Read-only	The configuration type of the service (Internal/Dynamic/ Configured). Possible values = Configured, Dynamic, Internal
value	<String>	Read-only	SSL status. Possible values = Certkey/ Certkeybundle/Vault not bound/Cert-store not usable, SSL feature disabled
gslb	<String>	Read-only	The GSLB option for the corresponding virtual server. Possible values = REMOTE, LOCAL
dup_state	<String>	Read-only	Added this field for getting state value from table. Possible values = ENABLED, DISABLED
publicip	<String>	Read-only	public ip.
publicport	<Integer>	Read-only	public port. Minimum value = 1 Range 1 - 65535 * in CLI is represented as

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			65535 in NITRO API
svrstate	<String>	Read-only	The state of the service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
monitor_state	<String>	Read-only	The running state of the monitor on this service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
monstatcode	<Integer>	Read-only	The code indicating the monitor response.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
lastresponse	<String>	Read-only	The string form of monstatcode.
responsetime	<Integer>	Read-only	Response time of this monitor.
monstatparam1	<Integer>	Read-only	First parameter for use with message code.
monstatparam2	<Integer>	Read-only	Second parameter for use with message code.
monstatparam3	<Integer>	Read-only	Third parameter for use with message code.
statechangetimesec	<String>	Read-only	Time when last state change happened. Seconds part.
statechangetimemsec	<Integer>	Read-only	Time at which last state change happened. Milliseconds part.
tickssincelaststatechange	<Integer>	Read-only	Time in 10 millisecond ticks since the last state change.
stateupdatereason	<Integer>	Read-only	Checks state update reason on the secondary node.
clmonowner	<Integer>	Read-only	Tells the mon owner of the service. Minimum value = 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 32
clmonview	<Integer>	Read-only	Tells the view id of the monitoring owner.
serviceipstr	<String>	Read-only	This field has been intorduced to show the dbs services ip.
oracleserverversion	<String>	Read-only	Oracle server version. Default value: 10G Possible values = 10G, 11G
nodefaultbindings	<String>	Read-only	to determine if the configuration will have default ssl CIPHER and ECC curve bindings. Default value: NO Possible values = YES, NO
monuserstatusmesg	<String>	Read-only	This field has been introduced to show user monitor failure reasons.
builtin	<String[]>	Read-only	. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

- DISABLE
- GET (ALL)
- GET
- COUNT
- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/service **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/service? **args=name: <String_value> ,all: <Boolean_value> ,Internal: <Boolean_value>**

Use this query-parameter to get service resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/config/service? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/service? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of service resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/service? **view=summary**

Use this query-parameter to get the summary output of service resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/service? **pagesize=#no;pageno=#no**

Use this query-parameter to get the service resources in chunks.

HTTP Method: GET

Request Headers:

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/service? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "service": [ { "__count": "#no"} ] }
```

service_binding

Binding object which returns the resources bound to service.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the service for which to display configuration details. Minimum length = 1
service_lbmonitor_binding	<service_lbmonitor_binding[]>	Read-only	lbmonitor that can be bound to service.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/service_binding/ name_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "service_binding": [ {

"name":<String_value>,

"service_lbmonitor_binding":<service_lbmonitor_binding[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/service_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/service_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "service_binding": [ {

"name":<String_value>,

"service_lbmonitor_binding":<service_lbmonitor_binding[]_value>

}]}
```

service_lbmonitor_binding

Binding object showing the lbmonitor that can be bound to service.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
monstate	<String>	Read-write	The configured state (enable/disable) of the monitor on this server. Possible values = ENABLED, DISABLED
weight	<Integer>	Read-write	Weight to assign to the monitor-service binding. When a monitor is UP, the weight assigned to its binding with the service determines how much the monitor contributes toward keeping the health of the service above the value configured for the Monitor Threshold parameter. Minimum value = 1 Maximum value = 100
name	<String>	Read-write	Name of the service to which to bind a monitor. Minimum length = 1
passive	<Boolean>	Read-write	Indicates if load monitor is passive. A passive load monitor does not remove service from LB decision when

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			threshold is breached.
monitor_name	<String>	Read-write	The monitor Names.
monitorcurrentfailedprobes	<Integer>	Read-only	Total number of currently failed probes.
dup_state	<String>	Read-only	Added this field for getting state value from table. Possible values = ENABLED, DISABLED
dup_weight	<Integer>	Read-only	The weight of the monitor.
totalprobes	<Integer>	Read-only	The total number of probs sent.
monitortotalprobes	<Integer>	Read-only	Total number of probes sent to monitor this service.
monstatcode	<Integer>	Read-only	The code indicating the monitor response.
monitor_state	<String>	Read-only	The running state of the monitor on this service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
monstatparam1	<Integer>	Read-only	First parameter for use with message code.
lastresponse	<String>	Read-only	The string form of monstatcode.
responsetime	<Integer>	Read-only	Response time of this monitor.
monstatparam3	<Integer>	Read-only	Third parameter for use with message code.
failedprobes	<Integer>	Read-only	Number of the current failed monitoring probes.
totalfailedprobes	<Integer>	Read-only	The total number of failed probs.
monstatparam2	<Integer>	Read-only	Second parameter for use with message code.
monitortotalfailedprobes	<Integer>	Read-only	Total number of failed probes.
__count	<Double>	Read-only	count parameter

servicegroup

Configuration for service group resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicegroupname	<String>	Read-write	Name of the service group. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Can be changed after the name is created. Minimum length = 1
servicetype	<String>	Read-write	Protocol used to exchange data with the service. Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, RPCSVR, DNS, ADNS, SNMP, RTSP, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP, ADNS_TCP, MYSQL, MSSQL, ORACLE, MONGO,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			MONGO_TLS, RADIUS, RADIUSListener, RDP, DIAMETER, SSL_DIAMETER, TFTP, SMPP, PPTP, GRE, SYSLOGTCP, SYSLOGUDP, FIX, SSL_FIX, USER_TCP, USER_SSL_TCP, QUIC, IPFIX, LOGSTREAM, LOGSTREAM_SSL, MQTT, MQTT_TLS, QUIC_BRIDGE, DOT, ADNS_DOT, HTTP_QUIC, ADNS_DOH, KAFKA_BROKER
cachetype	<String>	Read-write	Cache type supported by the cache server. Possible values = TRANSPARENT, REVERSE, FORWARD
td	<Integer>	Read-write	Integer value that uniquely identifies the traffic domain in which you want to configure the entity. If you do not specify an ID, the entity becomes part of the default traffic

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			domain, which has an ID of 0. Minimum value = 0 Maximum value = 4094
maxclient	<Integer>	Read-write	Maximum number of simultaneous open connections for the service group. Minimum value = 0 Maximum value = 4294967294
maxreq	<Integer>	Read-write	Maximum number of requests that can be sent on a persistent connection to the service group. Note: Connection requests beyond this value are rejected. Minimum value = 0 Maximum value = 65535
cacheable	<String>	Read-write	Use the transparent cache redirection virtual server to forward the request to the cache server. Note: Do not set this parameter if

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			you set the Cache Type. Default value: NO Possible values = YES, NO
cip	<String>	Read-write	Insert the Client IP header in requests forwarded to the service. Possible values = ENABLED, DISABLED
cipheader	<String>	Read-write	Name of the HTTP header whose value must be set to the IP address of the client. Used with the Client IP parameter. If client IP insertion is enabled, and the client IP header is not specified, the value of Client IP Header parameter or the value set by the set ns config command is used as client's IP header name. Minimum length = 1
usip	<String>	Read-write	Use client's IP address as the source IP address when initiating connection to the server. With the NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			setting, which is the default, a mapped IP (MIP) address or subnet IP (SNIP) address is used as the source IP address to initiate server side connections. Possible values = YES, NO
pathmonitor	<String>	Read-write	Path monitoring for clustering. Possible values = YES, NO
pathmonitorindv	<String>	Read-write	Individual Path monitoring decisions. Possible values = YES, NO
useproxyport	<String>	Read-write	Use the proxy port as the source port when initiating connections with the server. With the NO setting, the client-side connection port is used as the source port for the server-side connection. Note: This parameter is available only when the Use Source IP (USIP) parameter is set to YES.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
healthmonitor	<String>	Read-write	Monitor the health of this service. Available settings function as follows: YES - Send probes to check the health of the service. NO - Do not send probes to check the health of the service. With the NO option, the appliance shows the service as UP at all times. Default value: YES Possible values = YES, NO
sp	<String>	Read-write	Enable surge protection for the service group. Default value: OFF Possible values = ON, OFF
rtspsessionidremap	<String>	Read-write	Enable RTSP session ID mapping for the service group. Default value: OFF

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ON, OFF
clttimeout	<Integer>	Read-write	Time, in seconds, after which to terminate an idle client connection. Minimum value = 0 Maximum value = 31536000
svrtimeout	<Integer>	Read-write	Time, in seconds, after which to terminate an idle server connection. Minimum value = 0 Maximum value = 31536000
cka	<String>	Read-write	Enable client keep-alive for the service group. Possible values = YES, NO
tcpb	<String>	Read-write	Enable TCP buffering for the service group. Possible values = YES, NO
cmp	<String>	Read-write	Enable compression for the specified service. Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
maxbandwidth	<Integer>	Read-write	Maximum bandwidth, in Kbps, allocated for all the services in the service group. Minimum value = 0 Maximum value = 4294967287
monthreshold	<Integer>	Read-write	Minimum sum of weights of the monitors that are bound to this service. Used to determine whether to mark a service as UP or DOWN. Minimum value = 0 Maximum value = 65535
state	<String>	Read-write	Initial state of the service group. Default value: ENABLED Possible values = ENABLED, DISABLED
downstateflush	<String>	Read-write	Flush all active transactions associated with all the services in the service group whose state transitions from UP to DOWN. Do not enable this option for applications that

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			must complete their transactions. Default value: ENABLED Possible values = ENABLED, DISABLED
tcpprofilename	<String>	Read-write	Name of the TCP profile that contains TCP configuration settings for the service group. Minimum length = 1 Maximum length = 127
httpprofilename	<String>	Read-write	Name of the HTTP profile that contains HTTP configuration settings for the service group. Minimum length = 1 Maximum length = 127
aigwprofilename	<String>	Read-write	Name of the backend AIGW Profile which will be attached to the servicegroup. This parameter enables the servicegroup to process the LLM request/response based on the profile config. Any service item bound to the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			servicegroup will inherit the backend AIGW Profile bound at the servicegroup level, if it does not have an explicit AIGW Profile given at bind time. Minimum length = 1 Maximum length = 255
quicprofilename	<String>	Read-write	Name of QUIC profile which will be attached to the service group. Minimum length = 1 Maximum length = 255
comment	<String>	Read-write	Any information about the service group.
appflowlog	<String>	Read-write	Enable logging of AppFlow information for the specified service group. Default value: ENABLED Possible values = ENABLED, DISABLED
netprofile	<String>	Read-write	Network profile for the service group. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum length = 127
autoscale	<String>	Read-write	Auto scale option for a servicegroup. Default value: DISABLED Possible values = DISABLED, DNS, POLICY, CLOUD, API
memberport	<Integer>	Read-write	member port.
autodisablegraceful	<String>	Read-write	Indicates graceful shutdown of the service. System will wait for all outstanding connections to this service to be closed before disabling the service. Default value: NO Possible values = YES, NO
autodisabledelay	<Integer>	Read-write	The time allowed (in seconds) for a graceful shutdown. During this period, new connections or requests will continue to be sent to this service for clients who already have a persistent session on the system. Connections

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			or requests from fresh or new clients who do not yet have a persistence sessions on the system will not be sent to the service. Instead, they will be load balanced among other available services. After the delay time expires, no new requests or connections will be sent to the service.
autodelayedtrofs	<String>	Read-write	Indicates graceful movement of IP-Port binding/s to TROFS when IP addresses are removed from DNS response. System will wait for monitor response timeout period before moving to TROFS . Default value: NO Possible values = YES, NO
monconnectionclose	<String>	Read-write	Close monitoring connections by sending the service a connection termination message with the specified bit set.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: NONE Possible values = RESET, FIN
bootstrap	<String>	Read-write	Flag to check if kafka broker servicegroup is of type bootstrap or not. Default value: NO Possible values = YES, NO
topicname	<String>	Read-write	Name of the Kafka topic.
mcpprofilename	<String>	Read-write	Name of MCP profile which will be attached to the servicegroup.
servername	<String>	Read-write	Name of the server to which to bind the service group. Minimum length = 1
port	<Integer>	Read-write	Server port number. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
weight	<Integer>	Read-write	Weight to assign to the servers in the service group. Specifies the capacity of the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			servers relative to the other servers in the load balancing configuration. The higher the weight, the higher the percentage of requests sent to the service. Minimum value = 1 Maximum value = 100
customserverid	<String>	Read-write	The identifier for this IP:Port pair. Used when the persistency type is set to Custom Server ID. Default value: "None"
serverid	<Integer>	Read-write	The identifier for the service. This is used when the persistency type is set to Custom Server ID.
hashid	<Integer>	Read-write	The hash identifier for the service. This must be unique for each service. This parameter is used by hash based load balancing methods. Minimum value = 1
nameserver	<String>	Read-write	Specify the nameserver to which the query for bound domain needs to be

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			sent. If not specified, use the global nameserver.
dbsttl	<Integer>	Read-write	Specify the TTL for DNS record for domain based service.The default value of ttl is 0 which indicates to use the TTL received in DNS response for monitors. Default value: 0
order	<Integer>	Read-write	Order number to be assigned to the servicegroup member. Minimum value = 1 Maximum value = 8192
monitor_name_svc	<String>	Read-write	Name of the monitor bound to the service group. Used to assign a weight to the monitor. Minimum length = 1
dup_weight	<Integer>	Read-write	weight of the monitor that is bound to servicegroup. Minimum value = 1
delay	<Integer>	Read-write	Time, in seconds, allocated for a shutdown of the services in the service group.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			During this period, new requests are sent to the service only for clients who already have persistent sessions on the appliance. Requests from new clients are load balanced among other available services. After the delay time expires, no requests are sent to the service, and the service is marked as unavailable (OUT OF SERVICE).
graceful	<String>	Read-write	Wait for all existing connections to the service to terminate before shutting down the service. Default value: NO Possible values = YES, NO
includemembers	<Boolean>	Read-write	Display the members of the listed service groups in addition to their settings. Can be specified when no service group name is provided in the command. In that case, the details displayed for each service group are identical to the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			details displayed when a service group name is provided, except that bound monitors are not displayed.
newname	<String>	Read-write	New name for the service group. Minimum length = 1
numofconnections	<Integer>	Read-only	This will tell the number of client side connections are still open.
serviceconftype	<Boolean>	Read-only	The configuration type of the service group.
value	<String>	Read-only	SSL Status. Possible values = Certkey/ Certkeybundle/Vault not bound/Cert-store not usable, SSL feature disabled
svrstate	<String>	Read-only	The state of the service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			NS_EMPTY_STR, Unknown, DISABLED
ip	<String>	Read-only	IP Address.
monstatcode	<Integer>	Read-only	The code indicating the monitor response.
monstatparam1	<Integer>	Read-only	First parameter for use with message code.
monstatparam2	<Integer>	Read-only	Second parameter for use with message code.
monstatparam3	<Integer>	Read-only	Third parameter for use with message code.
statechangetimemsec	<Integer>	Read-only	Time when last state change occurred. Milliseconds part.
stateupdatereason	<Integer>	Read-only	Checks state update reason on the secondary node.
clmonowner	<Integer>	Read-only	Tells the mon owner of the service.
clmonview	<Integer>	Read-only	Tells the view id of the monitoring owner.
groupcount	<Integer>	Read-only	Servicegroup Count.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
serviceipstr	<String>	Read-only	This field has been intorduced to show the dbs services ip.
servicegroupeffective state	<String>	Read-only	Indicates the effective servicegroup state based on the state of the bound service items.If all services are UP the effective state is UP, if all are DOWN its DOWN,if all are OFS its OFS.If atleast one serviceis UP and rest are either DOWN or OFS, the effective state is PARTIAL-UP.If atleast one bound service is DOWN and rest are OFS the effective state is PARTIAL DOWN. Possible values = UP, DOWN, OUT OF SERVICE, PARTIAL-UP, PARTIAL-DOWN
nodefaultbindings	<String>	Read-only	to determine if the configuration is from stylebooks. Default value: NO Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
svcitmactsvcs	<Integer>	Read-only	This gives the total active service items for an FQDN for SRV type server binding.
svcitmboundsvcs	<Integer>	Read-only	This gives the total bound items for an FQDN for SRV type server binding.
monuserstatusmesg	<String>	Read-only	This field has been introduced to show user monitor failure reasons.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET
- ENABLE
- DISABLE
- GET (ALL)
- GET
- COUNT
- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/servicegroup **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/servicegroup? **args=servicegroupname: <String_value> ,includemembers: <Boolean_value>**

Use this query-parameter to get servicegroup resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/config/servicegroup? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/servicegroup? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of servicegroup resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/servicegroup? **view=summary**

Use this query-parameter to get the summary output of servicegroup resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/servicegroup? **pagesize=#no;pageno=#no**

Use this query-parameter to get the servicegroup resources in chunks.

HTTP Method: GET

Request Headers:

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/servicegroup? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "servicegroup": [ { "__count": "#no"} ] }
```

servicegroup_binding

Binding object which returns the resources bound to servicegroup.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicegroupname	<String>	Read-write	Name of the service group. Minimum length = 1
servicegroup_lbmonitor_binding	<servicegroup_lbmonitor_binding[]>	Read-only	lbmonitor that can be bound to servicegroup.
servicegroup_servicegroupentitymonbindings_binding	<servicegroup_servicegroupentitymonbindings_binding[]>	Read-only	servicegroupentitymonbindings that can be bound to servicegroup.
servicegroup_servicegroupmember_binding	<servicegroup_servicegroupmember_binding[]>	Read-only	servicegroupmember that can be bound to servicegroup.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.
- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/servicegroup_binding/ servicegroupname_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/servicegroup_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/servicegroup_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "servicegroup_binding": [ {

"servicegroupname":<String_value>,

"servicegroup_lbmonitor_binding":<servicegroup_lbmonitor_binding[]_value>,

"servicegroup_servicegroupmember_binding":<servicegroup_servicegroupmember
_binding[]_value>,

"servicegroup_servicegroupentitymonbindings_binding":<servicegroup_service
groupentitymonbindings_binding[]_value>

}]}
```

servicegroup_lbmonitor_binding

Binding object showing the lbmonitor that can be bound to servicegroup.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
monitor_name	<String>	Read-write	Monitor name.
serverid	<Integer>	Read-write	The identifier for the service. This is used when the persistency type is set to Custom Server ID.
customserverid	<String>	Read-write	Unique service identifier. Used when the persistency type for the virtual server is set to Custom Server ID. Default value: "None"
weight	<Integer>	Read-write	Weight to assign to the servers in the service group. Specifies the capacity of the servers relative to the other servers in the load balancing configuration. The higher the weight, the higher the percentage of requests sent to the service.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 1 Maximum value = 100
servicegroupname	<String>	Read-write	Name of the service group. Minimum length = 1
monstate	<String>	Read-write	Monitor state. Possible values = ENABLED, DISABLED
state	<String>	Read-write	Initial state of the service after binding. Default value: ENABLED Possible values = ENABLED, DISABLED
nameserver	<String>	Read-write	Specify the nameserver to which the query for bound domain needs to be sent. If not specified, use the global nameserver.
passive	<Boolean>	Read-write	Indicates if load monitor is passive. A passive load monitor does not remove service from LB decision when threshold is breached.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
aigwprofilename	<String>	Read-write	Name of the backend AIGW Profile which will be attached to the servicegroup. This parameter enables the servicegroup to process the LLM request/response based on the profile config. Any service item bound to the servicegroup will inherit the backend AIGW Profile bound at the servicegroup level, if it does not have an explicit AIGW Profile given at bind time. Minimum length = 1 Maximum length = 255
hashid	<Integer>	Read-write	Unique numerical identifier used by hash based load balancing methods to identify a service. Minimum value = 1
dbsttl	<Integer>	Read-write	Specify the TTL for DNS record for domain based service.The default value of ttl is 0 which indicates to use the TTL received in DNS

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			response for monitors. Default value: 0
port	<Integer>	Read-write	Port number of the service. Each service must have a unique port number. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
order	<Integer>	Read-write	Order number to be assigned to the servicegroup member. Minimum value = 1 Maximum value = 8192
monweight	<Integer>	Read-only	weight of the monitor that is bound to servicegroup.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/servicegroup_lbmonitor_binding **HTTP Method:** PUT

```

servicegroup_servicegroupmember_binding

Binding object showing the servicegroupmember that can be bound to servicegroup.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
serverid	<Integer>	Read-write	The identifier for the service. This is used when the persistency type is set to Custom Server ID.
customserverid	<String>	Read-write	The identifier for this IP:Port pair. Used when the persistency type is set to Custom Server ID. Default value: "None"
aigwprofilename	<String>	Read-write	Name of the backend AIGW Profile which will be attached to the servicegroup. This parameter enables the servicegroup to process the LLM request/response based on the profile config. Any service item bound to the servicegroup will inherit the backend AIGW Profile bound at the servicegroup level, if it does not have an explicit AIGW Profile given at bind time. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum length = 255
hashid	<Integer>	Read-write	The hash identifier for the service. This must be unique for each service. This parameter is used by hash based load balancing methods. Minimum value = 1
dbsttl	<Integer>	Read-write	Specify the TTL for DNS record for domain based service.The default value of ttl is 0 which indicates to use the TTL received in DNS response for monitors. Default value: 0
port	<Integer>	Read-write	Server port number. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
order	<Integer>	Read-write	Order number to be assigned to the servicegroup member. Minimum value = 1 Maximum value = 8192

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ip	<String>	Read-write	IP Address.
weight	<Integer>	Read-write	Weight to assign to the servers in the service group. Specifies the capacity of the servers relative to the other servers in the load balancing configuration. The higher the weight, the higher the percentage of requests sent to the service. Minimum value = 1 Maximum value = 100
servername	<String>	Read-write	Name of the server to which to bind the service group. Minimum length = 1
servicegroupname	<String>	Read-write	Name of the service group. Minimum length = 1
state	<String>	Read-write	Initial state of the service group. Default value: ENABLED Possible values = ENABLED, DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
nameserver	<String>	Read-write	Specify the nameserver to which the query for bound domain needs to be sent. If not specified, use the global nameserver.
trofsreason	<String>	Read-only	Specify reason if service group member in TROFS. Possible values = Trofs Because of Graceful Unbind, Trofs Because of Disable Cmd, Trofs Becasue of Autoscale IP not present in DNS Response, Trofs Because of Monitor Response has Trofs String
graceful	<String>	Read-only	Wait for all existing connections to the service to terminate before shutting down the service. Default value: NO Possible values = YES, NO
delay	<Integer>	Read-only	Time, in seconds, allocated for a shutdown of the services in the service group.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			During this period, new requests are sent to the service only for clients who already have persistent sessions on the appliance. Requests from new clients are load balanced among other available services. After the delay time expires, no requests are sent to the service, and the service is marked as unavailable (OUT OF SERVICE).
svrstate	<String>	Read-only	The state of the service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
trofsdelay	<Integer>	Read-only	Delay before moving to TROFS.
svcitmpriority	<Integer>	Read-only	This gives the priority of the FQDN service

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			items for SRV server binding.
statechangetimesec	<String>	Read-only	Time when last state change occurred. Seconds part.
orderstr	<String>	Read-only	Order number in string form to be assigned to the servicegroup member.
tickssincelaststatechange	<Integer>	Read-only	Time in 10 millisecond ticks since the last state change.
__count	<Double>	Read-only	count parameter

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/ servicegroup_servicegroupmember_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "servicegroup_servicegroupmember_binding": [ {

Response Payload:

```
{"servicegroup_servicegroupmember_binding": [ { "__count": "#no"} ] }
```

servicegroup_servicegroupmemberlist_binding

Binding object showing the servicegroupmemberlist that can be bound to servicegroup.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
members	<object[]>	Read-write	Desired servicegroupmember binding set. Any existing servicegroupmember which is not part of the input will be deleted or disabled based on graceful setting on servicegroup.
servicegroupname	<String>	Read-write	Name of the service group. Minimum length = 1
failedmembers	<object[]>	Read-only	List of servicegroupmembers which couldn't be bound.

OBJECT MEMBER	NAME	TYPE	DESCRIPTION
	ip port weight state order	<String> <Integer> <Integer> <String> <Integer>	IP Address. The port number of the service to be enabled. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API . Default value: 1 Minimum value = 1 Maximum value = 100 Initial state of the service group. Default value: ENABLED Possible values = ENABLED, DISABLED Order number to be assigned to the servicegroup member. Minimum value = 1 Maximum value = 8192
	ip port	<String> <Integer>	IP Address. The port number of the service to be enabled. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API

Operations

- ADD
- DELETE

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/servicegroup_servicegroupmemberlist_binding
HTTP Method: PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"servicegroup_servicegroupmemberlist_binding":{

<b>"servicegroupname":<String_value>,

</b>"members":<object[]_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/servicegroup_servicegroupmemberlist_binding/servicegroupname_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

servicegroupbindings

Configuration for servicegroupbind resource.

vserver

Configuration for virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	The name of the virtual server to be removed. Minimum length = 1
backupvserver	<String>	Read-write	The name of the backup virtual server for this virtual server. Minimum length = 1
redirecturl	<String>	Read-write	The URL where traffic is redirected if the virtual server in the system becomes unavailable. Minimum length = 1
cacheable	<String>	Read-write	Use this option to specify whether a virtual server (used for load balancing or content switching) routes requests to the cache redirection virtual server before sending it to the configured servers.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
clttimeout	<Integer>	Read-write	The timeout value in seconds for idle client connection. Minimum value = 0 Maximum value = 31536000
somethod	<String>	Read-write	The spillover factor. The system will use this value to determine if it should send traffic to the backupvserver when the main virtual server reaches the spillover threshold. Possible values = CONNECTION, DYNAMICCONNECTION, BANDWIDTH, HEALTH, LLMQUOTA, NONE
sopersistence	<String>	Read-write	The state of the spillover persistence. Default value: DISABLED Possible values = ENABLED, DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sopersistencetimeout	<Integer>	Read-write	The spillover persistence entry timeout. Default value: 2 Minimum value = 2 Maximum value = 1440
sothreshold	<Integer>	Read-write	The spillver threshold value. Minimum value = 1 Maximum value = 4294967294
pushvserver	<String>	Read-write	The lb vserver of type PUSH/ SSL_PUSH to which server pushes the updates received on the client facing non-push lb vserver. Minimum length = 1

bfd

Bfd

Bidirectional Forwarding Detection

NAME	DESCRIPTION
bfdsession	Configuration for BFD configuration

bfdsession

Configuration for BFD configuration resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
localip	<String>	Read-write	IPV4 or IPV6 Address of Local Node.
remoteip	<String>	Read-write	IPV4 or IPV6 Address of Remote Node.
state	<String>	Read-only	Current state of the BFD session. Possible values = ADMIN DOWN, DOWN, INIT, UP
localport	<Integer>	Read-only	Source Port used by Local node to send Control packets for the BFD session.
remoteport	<Integer>	Read-only	Source Port used by Remote node to send Control packets for the BFD session.
minimumtransmitinterval	<Integer>	Read-only	Minimum trasmit interval, in milliseconds, the local node would like to use when

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			transmitting BFD Control packets.
negotiatedminimumtransmitinterval	<Integer>	Read-only	Negotiated Minimum Transmit Interval. This is the interval at which the local node will be sending out BFD control packets.
minimumreceiveinterval	<Integer>	Read-only	Minimum receive interval, in milliseconds, between received BFD Control packets that the local node is capable of supporting.
negotiatedminimumreceiveinterval	<Integer>	Read-only	Negotiated Minimum Receive Interval. This is the interval at which the local node will be expecting BFD control packets.
multiplier	<Integer>	Read-only	Detection Multiplier. The negotiated transmit interval multiplied by Detection multiplier provides the Detection Time for the remote node for the BFD session.
remotemultiplier	<Integer>	Read-only	Your Multiplier. The negotiated receive interval multiplied by Your Multiplier provides the Detection Time for

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the local node for the BFD session.
vlan	<Integer>	Read-only	VLAN ID on which the BDS session is configured.
localdiagnotic	<Integer>	Read-only	Diagnostic Code specifying the local system's reason for the last change in session state.
localdiscriminator	<Integer>	Read-only	A unique discriminator value generated by the local node for the session.
remotediscriminator	<Integer>	Read-only	A unique discriminator value as received from the remote node for the session.
passive	<Boolean>	Read-only	Flag indicating that the session is passive.
multihop	<Boolean>	Read-only	Flag indicating if the session is multihop.
admindown	<Boolean>	Read-only	Flag indicating if admin down is being sent.
originalownerpe	<Integer>	Read-only	Original Owner PE of the BFD session.
currentownerpe	<Integer>	Read-only	Current Owner PE of the BFD session.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ownernode	<Integer>	Read-only	The owner node in a Cluster for this BFD session. Owner node can vary from 0 to 31. If ownernode is not specified then the session is treated as Striped session. Default value: 255
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

bot

Bot

Bot Management.

NAME	DESCRIPTION
botglobal_binding	Binding object showing the resources that can be bound to botglobal
botglobal_botpolicy_binding	Binding object showing the botpolicy that can be bound to botglobal
botpolicy	Configuration for Bot policy
botpolicy_binding	Binding object showing the resources that can be bound to botpolicy
botpolicy_botglobal_binding	Binding object showing the botglobal that can be bound to botpolicy
botpolicy_botpolicylabel_binding	Binding object showing the botpolicylabel that can be bound to botpolicy
botpolicy_csvserver_binding	Binding object showing the csvserver that can be bound to botpolicy
botpolicy_lbvserver_binding	Binding object showing the lbvserver that can be bound to botpolicy
botpolicylabel	Configuration for Bot policy label
botpolicylabel_binding	Binding object showing the resources that can be bound to botpolicylabel
botpolicylabel_botpolicy_binding	Binding object showing the botpolicy that can be bound to botpolicylabel

NAME	DESCRIPTION
botpolicylabel_policybinding_binding	Binding object showing the policybinding that can be bound to botpolicylabel
botprofile	Configuration for Bot profile
botprofile_binding	Binding object showing the resources that can be bound to botprofile
botprofile_blacklist_binding	Binding object showing the blacklist that can be bound to botprofile
botprofile_captcha_binding	Binding object showing the captcha that can be bound to botprofile
botprofile_ipreputation_binding	Binding object showing the ipreputation that can be bound to botprofile
botprofile_kmdetectionexpr_binding	Binding object showing the kmdetectionexpr that can be bound to botprofile
botprofile_logexpression_binding	Binding object showing the logexpression that can be bound to botprofile
botprofile_ratelimit_binding	Binding object showing the ratelimit that can be bound to botprofile
botprofile_tps_binding	Binding object showing the tps that can be bound to botprofile
botprofile_trapinsertionurl_binding	Binding object showing the trapinsertionurl that can be bound to botprofile

NAME	DESCRIPTION
botprofile_whitelist_binding	Binding object showing the whitelist that can be bound to botprofile
botsettings	Configuration for Bot engine settings
botsignature	Configuration for bot signatures

botglobal_binding

Binding object which returns the resources bound to botglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botglobal_botpolicy_binding	<botglobal_botpolicy_binding[]>	Read-write	botpolicy that can be bound to botglobal.

Operations

(click to see Properties)

- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/botglobal_binding

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response:

HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "botglobal_binding": [ {

"botglobal_botpolicy_binding":<botglobal_botpolicy_binding[]_value>

}]}
```

botglobal_botpolicy_binding

Binding object showing the botpolicy that can be bound to botglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
type	<String>	Read-write	Specifies the bind point whose policies you want to display. Available settings function as follows: * REQ_OVERRIDE - Request override. Binds the policy to the priority request queue. * REQ_DEFAULT - Binds the policy to the default request queue. Possible values = REQ_OVERRIDE, REQ_DEFAULT
globalbindtype	<String>	Read-write	. Default value: SYSTEM_GLOBAL Possible values = SYSTEM_GLOBAL, VPN_GLOBAL, RNAT_GLOBAL, APPFW_GLOBAL, TM_GLOBAL

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Name of the bot policy.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
invoke	<Boolean>	Read-write	If the current policy evaluates to TRUE, terminate evaluation of policies bound to the current policy label, and then forward the request to the specified virtual server.
labeltype	<String>	Read-write	Type of invocation, Available settings function as follows: * vserver - Forward the request to the specified virtual server. * policylabel - Invoke the specified policy label. Possible values = vserver, policylabel
priority	<Integer>	Read-write	Specifies the priority of the policy.
labelname	<String>	Read-write	Name of the policy label to invoke. If the current policy evaluates to TRUE, the invoke parameter

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			is set, and Label Type is policylabel.
flowtype	<Integer>	Read-only	flowtype of the bound bot policy.
numpol	<Integer>	Read-only	number of polices bound to label.
__count	<Double>	Read-only	count parameter

botpolicy

Configuration for Bot policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the bot policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Can be changed after the bot policy is added.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my bot policy" or 'my bot policy').
rule	<String>	Read-write	Expression that the policy uses to determine whether to apply bot profile on the specified request.
profilename	<String>	Read-write	Name of the bot profile to apply if the request matches this bot policy.
undefaction	<String>	Read-write	Action to perform if the result of policy evaluation is undefined (UNDEF). An UNDEF event indicates an internal error condition.
comment	<String>	Read-write	Any type of information about this bot policy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
logaction	<String>	Read-write	Name of the messagelog action to use for requests that match this policy.
newname	<String>	Read-write	New name for the bot policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my bot policy" or 'my bot policy'). Minimum length = 1
hits	<Integer>	Read-only	Number of hits.
undefhits	<Integer>	Read-only	Number of policy UNDEF hits.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
builtin	<String[]>	Read-only	Flag to determine if bot policy is built-in or not. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

}]}
```

botpolicy_botglobal_binding

Binding object showing the botglobal that can be bound to botpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the bot policy for which to display settings.
boundto	<String>	Read-write	Location where policy is bound.
labelname	<String>	Read-only	Name of the label to invoke if the current policy rule evaluates to TRUE.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
activepolicy	<Integer>	Read-only	Indicates whether policy is bound or not.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labeltype	<String>	Read-only	Type of policy label invocation. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-only	Specifies the priority of the policy.
__count	<Double>	Read-only	count parameter

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/botpolicy_botglobal_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/botpolicy_botglobal_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "botpolicy_botglobal_binding": [ {

"name":<String_value>,

"boundto":<String_value>,

"labelname":<String_value>,

"gotopriorityexpression":<String_value>,

"activepolicy":<Integer_value>,

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"botpolicy_botglobal_binding": [ { "__count": "#no"} ] }
```

botpolicy_botpolicylabel_binding

Binding object showing the botpolicylabel that can be bound to botpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the bot policy for which to display settings.
boundto	<String>	Read-write	Location where policy is bound.
labeltype	<String>	Read-only	Type of policy label invocation. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-only	Specifies the priority of the policy.
labelname	<String>	Read-only	Name of the label to invoke if the current policy rule evaluates to TRUE.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
activepolicy	<Integer>	Read-only	Indicates whether policy is bound or not.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/botpolicy_botpolicylabel_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ botpolicy_botpolicylabel_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of botpolicy_botpolicylabel_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/botpolicy_botpolicylabel_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the botpolicy_botpolicylabel_binding resources in chunks.

HTTP Method: GET

Request Headers:

botpolicylabel

Configuration for Bot policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name for the bot policy label. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after the responder policy label is added.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my responder policy label" or my responder policy label').
comment	<String>	Read-write	Any comments to preserve information about this bot policy label.
newname	<String>	Read-write	New name for the bot policy label. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Minimum length = 1
numpol	<Integer>	Read-only	number of polices bound to label.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
hits	<Integer>	Read-only	Number of times policy label was invoked.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

```

botpolicylabel_botpolicy_binding

Binding object showing the botpolicy that can be bound to botpolicylabel.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name of the bot policy label to which to bind the policy.
labeltype	<String>	Read-write	Type of policy label to invoke. Available settings function as follows: * vserver - Invoke an unnamed policy label associated with a virtual server. * policylabel - Invoke a user-defined policy label. Possible values = vserver, policylabel
priority	<Integer>	Read-write	Specifies the priority of the policy.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
invoke	<Boolean>	Read-write	If the current policy evaluates to TRUE, terminate evaluation

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			of policies bound to the current policy label and evaluate the specified policy label.
policyname	<String>	Read-write	Name of the bot policy.
invoke_labelname	<String>	Read-write	* If labelType is policylabel, name of the policy label to invoke. * If labelType is vserver, name of the virtual server.
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/botpolicylabel_botpolicy_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"botpolicylabel_botpolicy_binding":{

<b>"labelname":<String_value>,

</b><b>"policyname":<String_value>,

</b><b>"priority":<Integer_value>,

</b>"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,
```

```
"labeltype":<String_value>,

"invoke_labelname":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/botpolicylabel_botpolicy_binding/ labelname_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ botpolicylabel_botpolicy_binding/ labelname_value<String> ? **args= policyname:<String_value>, priority: <Integer_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/botpolicylabel_botpolicy_binding/ labelname_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ botpolicylabel_botpolicy_binding/ labelname_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of botpolicylabel_botpolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/botpolicylabel_botpolicy_binding/ labelname_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the botpolicylabel_botpolicy_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "botpolicylabel_botpolicy_binding": [ {

"labelname":<String_value>,

"labeltype":<String_value>,

"priority":<Integer_value>,

"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,

"policyname":<String_value>,

"invoke_labelname":<String_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/botpolicylabel_botpolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/botpolicylabel_botpolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "botpolicylabel_botpolicy_binding": [ {

"labelname":<String_value>,

"labeltype":<String_value>,

"priority":<Integer_value>,

"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,

"policyname":<String_value>,

"invoke_labelname":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/botpolicylabel_botpolicy_binding/ labelname_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"botpolicylabel_botpolicy_binding": [ { "__count": "#no"} ] }
```

botpolicylabel_policybinding_binding

Binding object showing the policybinding that can be bound to botpolicylabel.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION

```

botprofile

Configuration for Bot profile resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the profile. Must begin with a letter, number, or the underscore character

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			(_), and must contain only letters, numbers, and the hyphen (-), period (.), pound (#), space ( ), at (@), equals (=), colon (:), and underscore (_) characters. Cannot be changed after the profile is added. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my profile" or 'my profile'). Minimum length = 1 Maximum length = 31
signature	<String>	Read-write	Name of object containing bot static signature details. Minimum length = 1
errorurl	<String>	Read-write	URL that Bot protection uses as the Error URL. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
trapurl	<String>	Read-write	URL that Bot protection uses as the Trap URL. Minimum length = 1 Maximum length = 127
comment	<String>	Read-write	Any comments about the purpose of profile, or other useful information about the profile. Minimum length = 1
bot_enable_white_list	<String>	Read-write	Enable white-list bot detection. Default value: OFF Possible values = ON, OFF
bot_enable_black_list	<String>	Read-write	Enable black-list bot detection. Default value: OFF Possible values = ON, OFF
bot_enable_rate_limit	<String>	Read-write	Enable rate-limit bot detection. Default value: OFF Possible values = ON, OFF
devicefingerprint	<String>	Read-write	Enable device-fingerprint bot detection.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: OFF Possible values = ON, OFF
devicefingerprintaction	<String[]>	Read-write	Action to be taken for device-fingerprint based bot detection. Default value: NONE Possible values = NONE, LOG, DROP, REDIRECT, RESET, MITIGATION
bot_enable_ip_reputation	<String>	Read-write	Enable IP-reputation bot detection. Default value: OFF Possible values = ON, OFF
trap	<String>	Read-write	Enable trap bot detection. Default value: OFF Possible values = ON, OFF
trapaction	<String[]>	Read-write	Action to be taken for bot trap based bot detection. Default value: NONE Possible values = NONE, LOG,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			DROP, REDIRECT, RESET
signaturenouseragentheaderaction	<String[]>	Read-write	Actions to be taken if no User-Agent header in the request (Applicable if Signature check is enabled). Default value: DROP Possible values = NONE, LOG, DROP, REDIRECT, RESET
signaturemultipleuseragentheaderaction	<String[]>	Read-write	Actions to be taken if multiple User-Agent headers are seen in a request (Applicable if Signature check is enabled). Log action should be combined with other actions. Default value: CHECKLAST Possible values = CHECKLAST, LOG, DROP, REDIRECT, RESET
bot_enable_tps	<String>	Read-write	Enable TPS. Default value: OFF Possible values = ON, OFF

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
devicefingerprintmobile	<String[]>	Read-write	Enabling bot device fingerprint protection for mobile clients. Default value: NONE Possible values = NONE, Android, iOS
headlessbrowserdetection	<String>	Read-write	Enable Headless Browser detection. Default value: OFF Possible values = ON, OFF
clientipexpression	<String>	Read-write	Expression to get the client IP.
kmjavascriptname	<String>	Read-write	Name of the JavaScript file that the Bot Management feature will insert in the response for keyboard-mouse based detection. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:),

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			and underscore characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my javascript file name" or 'my javascript file name').
kmdetection	<String>	Read-write	Enable keyboard-mouse based bot detection. Default value: OFF Possible values = ON, OFF
kmeventspostbodylimit	<Integer>	Read-write	Size of the KM data send by the browser, needs to be processed on ADC. Minimum value = 1 Maximum value = 204800
verboseloglevel	<String>	Read-write	Bot verbose Logging. Based on the log level, ADC will log additional

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			information whenever client is detected as a bot. Default value: NONE Possible values = NONE, HTTP_FULL_HEADER
spoofedreqaction	<String[]>	Read-write	Actions to be taken on a spoofed request (A request spoofing good bot user agent string). Default value: BOT_ACTION_LOG_DROP Possible values = NONE, LOG, DROP, REDIRECT, RESET
dfprequestlimit	<Integer>	Read-write	Number of requests to allow without bot session cookie if device fingerprint is enabled. Minimum value = 1
sessioncookiename	<String>	Read-write	Name of the SessionCookie that the Bot Management feature uses for tracking. Must begin with a letter or number, and can consist of

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			from 1 to 31 letters, numbers, and the hyphen (-) and underscore (_) symbols. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my cookie name" or 'my cookie name'). Minimum length = 1
sessiontimeout	<Integer>	Read-write	Timeout, in seconds, after which a user session is terminated. Minimum value = 1 Maximum value = 65535
addcookieflags	<String>	Read-write	Add the specified flags to bot session cookies. Available settings function as follows:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* None - Do not add flags to cookies. * HTTP Only - Add the HTTP Only flag to cookies, which prevents scripts from accessing cookies. * Secure - Add Secure flag to cookies. * All - Add both HTTPOnly and Secure flags to cookies. Default value: httpOnly Possible values = none, httpOnly, secure, all
builtin	<String[]>	Read-only	Flag to determine if bot profille is built-in or not. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

- ADD
- UPDATE
- UNSET
- DELETE
- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/botprofile? **action=unset HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"botprofile":{

<b>"name":<String_value>,

</b>"signature":true,

"errorurl":true,

botprofile_binding

Binding object which returns the resources bound to botprofile.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the bot management profile. Minimum length = 1 Maximum length = 31
botprofile_trapinsertionurl_binding	<botprofile_trapinsertionurl_binding[]>	Read-only	trapinsertionurl that can be bound to botprofile.
botprofile_whitelist_binding	<botprofile_whitelist_binding[]>	Read-only	whitelist that can be bound to botprofile.
botprofile_ipreputation_binding	<botprofile_ipreputation_binding[]>	Read-only	ipreputation that can be bound to botprofile.
botprofile_logexpression_binding	<botprofile_logexpression_binding[]>	Read-only	logexpression that can be bound to botprofile.
botprofile_blacklist_binding	<botprofile_blacklist_binding[]>	Read-only	blacklist that can be bound to botprofile.
botprofile_tps_binding	<botprofile_tps_binding[]>	Read-only	tps that can be bound to botprofile.
botprofile_ratelimit_binding	<botprofile_ratelimit_binding[]>	Read-only	ratelimit that can be bound to botprofile.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botprofile_captcha_binding	<botprofile_captcha_binding[]>	Read-only	captcha that can be bound to botprofile.
botprofile_kmdetectionexpr_binding	<botprofile_kmdetectionexpr_binding[]>	Read-only	kmdetectionexpr that can be bound to botprofile.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/botprofile_binding/ name_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "botprofile_binding": [ {

"name":<String_value>,

"botprofile_ratelimit_binding":<botprofile_ratelimit_binding[]_value>,

"botprofile_whitelist_binding":<botprofile_whitelist_binding[]_value>,

"botprofile_trapinsertionurl_binding":<botprofile_trapinsertionurl_binding
[]_value>,

"botprofile_logexpression_binding":<botprofile_logexpression_binding[]_val
ue>,

"botprofile_kmdetectionexpr_binding":<botprofile_kmdetectionexpr_binding[]
_value>,

"botprofile_blacklist_binding":<botprofile_blacklist_binding[]_value>,

"botprofile_captcha_binding":<botprofile_captcha_binding[]_value>,

"botprofile_tps_binding":<botprofile_tps_binding[]_value>,
```

```
"botprofile_ipreputation_binding":<botprofile_ipreputation_binding[]_value
>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/botprofile_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/botprofile_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "botprofile_binding": [ {

"name":<String_value>,

"botprofile_ratelimit_binding":<botprofile_ratelimit_binding[]_value>,

"botprofile_whitelist_binding":<botprofile_whitelist_binding[]_value>,

"botprofile_trapinsertionurl_binding":<botprofile_trapinsertionurl_binding
[]_value>,
```

```
"botprofile_logexpression_binding":<botprofile_logexpression_binding[]_value>,

"botprofile_kmdetectionexpr_binding":<botprofile_kmdetectionexpr_binding[]_value>,

"botprofile_blacklist_binding":<botprofile_blacklist_binding[]_value>,

"botprofile_captcha_binding":<botprofile_captcha_binding[]_value>,

"botprofile_tps_binding":<botprofile_tps_binding[]_value>,

"botprofile_ipreputation_binding":<botprofile_ipreputation_binding[]_value>

}]}
```

botprofile_blacklist_binding

Binding object showing the blacklist that can be bound to botprofile.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
bot_blacklist_enabled	<String>	Read-write	Enabled or disbaled black-list binding. Default value: OFF Possible values = ON, OFF
bot_blacklist_type	<String>	Read-write	Type of the black-list entry. Possible values = IPv4, SUBNET, IPv6, IPv6_SUBNET, EXPRESSION

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the profile. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.), pound (#), space ( ), at (@), equals (=), colon (:), and underscore (_) characters. Cannot be changed after the profile is added.

The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my profile" or 'my profile').

Minimum length = 1

Maximum length = 31

Minimum length = 1

Default value: NONE

Possible values = NONE, LOG, DROP, RESET, REDIRECT

Minimum length = 1

botprofile_ipreputation_binding

Binding object showing the ipreputation that can be bound to botprofile.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
bot_ipreputation	<Boolean>	Read-write	IP reputation binding. For each category, only one binding is allowed. To update

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the values of an existing binding, user has to first unbind that binding, and then needs to bind again with the new values.
bot_iprep_action	<String[]>	Read-write	One or more actions to be taken if bot is detected based on this IP Reputation binding. Only LOG action can be combinded with DROP, RESET, REDIRECT or MITIGATION action. Default value: NONE Possible values = NONE, LOG, DROP, REDIRECT, RESET, MITIGATION
bot_iprep_enabled	<String>	Read-write	Enabled or disabled IP-repuation binding. Default value: OFF Possible values = ON, OFF
category	<String>	Read-write	IP Repuation category. Following IP Reuputation categories are allowed: *IP_BASED - This category checks whether

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			client IP is malicious or not. *BOTNET - This category includes Botnet C;C channels, and infected zombie machines controlled by Bot master. *SPAM_SOURCES - This category includes tunneling spam messages through a proxy, anomalous SMTP activities, and forum spam activities. *SCANNERS - This category includes all reconnaissance such as probes, host scan, domain scan, and password brute force attack. *DOS - This category includes DOS, DDOS, anomalous sync flood, and anomalous traffic detection. *REPUTATION - This category denies access from IP addresses currently known to be infected with malware. This category also includes IPs with average low Webroot Reputation Index score. Enabling this category will prevent

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			access from sources identified to contact malware distribution points. *PHISHING - This category includes IP addresses hosting phishing sites and other kinds of fraud activities such as ad click fraud or gaming fraud. *PROXY - This category includes IP addresses providing proxy services. *NETWORK - IPs providing proxy and anonymization services including The Onion Router aka TOR or darknet. *MOBILE_THREATS - This category checks client IP with the list of IPs harmful for mobile devices. *WINDOWS_EXPLOITS - This category includes active IP address offering or distributig malware, shell code, rootkits, worms or viruses. *WEB_ATTACKS - This category includes cross site scripting, iFrame injection, SQL injection, cross domain injection or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			domain password brute force attack. *TOR_PROXY - This category includes IP address acting as exit nodes for the Tor Network. *CLOUD - This category checks client IP with list of public cloud IPs. *CLOUD_AWS - This category checks client IP with list of public cloud IPs from Amazon Web Services. *CLOUD_GCP - This category checks client IP with list of public cloud IPs from Google Cloud Platform. *CLOUD_AZURE - This category checks client IP with list of public cloud IPs from Azure. *CLOUD_ORACLE - This category checks client IP with list of public cloud IPs from Oracle. *CLOUD_IBM - This category checks client IP with list of public cloud IPs from IBM. *CLOUD_SALESFORCE - This category checks client IP with

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			list of public cloud IPs from Salesforce. Possible values = IP, BOTNETS, SPAM_SOURCES, SCANNERS, DOS, REPUTATION, PHISHING, PROXY, NETWORK, MOBILE_THREATS, WINDOWS_EXPLOITS, WEB_ATTACKS, TOR_PROXY, CLOUD, CLOUD_AWS, CLOUD_GCP, CLOUD_AZURE, CLOUD_ORACLE, CLOUD_IBM, CLOUD_SALESFORCE
bot_bind_comment	<String>	Read-write	Any comments about this binding. Minimum length = 1
logmessage	<String>	Read-write	Message to be logged for this binding. Minimum length = 1
name	<String>	Read-write	Name for the profile. Must begin with a letter, number, or the underscore character

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			(_), and must contain only letters, numbers, and the hyphen (-), period (.), pound (#), space ( ), at (@), equals (=), colon (:), and underscore (_) characters. Cannot be changed after the profile is added.

The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my profile" or 'my profile').

Minimum length = 1

Maximum length = 31

Response Payload:

```
{"botprofile_ipreputation_binding": [ { "__count": "#no"} ] }
```

botprofile_kmdetectionexpr_binding

Binding object showing the kmdetectionexpr that can be bound to botprofile.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
logmessage	<String>	Read-write	Message to be logged for this binding. Minimum length = 1
name	<String>	Read-write	Name for the profile. Must begin with a letter, number, or the underscore character (_), and must contain

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			only letters, numbers, and the hyphen (-), period (.), pound (#), space ( ), at (@), equals (=), colon (:), and underscore (_) characters. Cannot be changed after the profile is added.

The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my profile" or 'my profile').

Minimum length = 1

Maximum length = 31

Minimum length = 1

Minimum length = 1

Default value: OFF

Possible values = ON, OFF

Minimum length = 1

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

botprofile_tps_binding

Binding object showing the tps that can be bound to botprofile.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
bot_tps	<Boolean>	Read-write	TPS binding. For each type only

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			binding can be configured. To update the values of an existing binding, user has to first unbind that binding, and then needs to bind again with new values.
bot_tps_type	<String>	Read-write	Type of TPS binding. Possible values = SOURCE_IP, GEOLOCATION, REQUEST_URL, Host
percentage	<Integer>	Read-write	Maximum percentage increase in the requests from (or to) a IP, Geolocation, URL or Host in 30 minutes interval. Minimum value = 10
bot_tps_enabled	<String>	Read-write	Enabled or disabled TPS binding. Default value: ON Possible values = ON, OFF
bot_bind_comment	<String>	Read-write	Any comments about this binding. Minimum length = 1
threshold	<Integer>	Read-write	Maximum number of requests that are allowed from (or to) a

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			IP, Geolocation, URL or Host in 1 second time interval. Minimum value = 1
bot_tps_action	<String[]>	Read-write	One to more actions to be taken if bot is detected based on this TPS binding. Only LOG action can be combined with DROP, RESET, REDIRECT, or MITIGATION action. Default value: NONE Possible values = NONE, LOG, DROP, REDIRECT, RESET, MITIGATION
logmessage	<String>	Read-write	Message to be logged for this binding. Minimum length = 1
name	<String>	Read-write	Name for the profile. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.), pound (#), space ( ), at (@), equals (=), colon (:), and underscore (_)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			characters. Cannot be changed after the profile is added.

The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my profile" or 'my profile').

Minimum length = 1

Maximum length = 31

Operations

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/botprofile_tps_binding **HTTP Method:** PUT

botsettings

Configuration for Bot engine settings resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
defaultprofile	<String>	Read-write	Profile to use when a connection does not match any policy. Default setting is " ", which sends unmatched connections back to the Citrix ADC without attempting to filter them further. Minimum length = 1
defaultnonintrusiveprofile	<String>	Read-write	Profile to use when the feature is not enabled but feature is licensed. NonIntrusive checks will be disabled and IPRep cronjob(24 Hours) will be removed if this is set to BOT_BYPASS. Default value: BOT_STATS Minimum length = 1 Possible values = BOT_BYPASS,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			BOT_STATS, BOT_LOG
javascriptname	<String>	Read-write	Name of the JavaScript that the Bot Management feature uses in response. Must begin with a letter or number, and can consist of from 1 to 31 letters, numbers, and the hyphen (-) and underscore (_) symbols. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my cookie name" or 'my cookie name'). Minimum length = 1
sessiontimeout	<Integer>	Read-write	Timeout, in seconds, after which a user session is terminated.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 1 Maximum value = 65535
sessioncookiename	<String>	Read-write	Name of the SessionCookie that the Bot Management feature uses for tracking. Must begin with a letter or number, and can consist of from 1 to 31 letters, numbers, and the hyphen (-) and underscore (_) symbols. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my cookie name" or 'my cookie name'). Minimum length = 1
dfprequestlimit	<Integer>	Read-write	Number of requests to allow without bot session cookie if

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			device fingerprint is enabled. Minimum value = 1
signatureautoupdate	<String>	Read-write	Flag used to enable/disable bot auto update signatures. Default value: OFF Possible values = ON, OFF
signatureurl	<String>	Read-write	URL to download the bot signature mapping file from server. Default value: https://nsbotsignatures.s3.amazonaws.com/BotSignatureMapping.json
proxyserver	<String>	Read-write	Proxy Server IP to get updated signatures from AWS.
proxyport	<Integer>	Read-write	Proxy Server Port to get updated signatures from AWS. Default value: 8080 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
trapurlautogenerate	<String>	Read-write	Enable/disable trap URL auto generation. When enabled, trap URL is updated within the configured interval. Default value: OFF Possible values = ON, OFF
trapurlinterval	<Integer>	Read-write	Time in seconds after which trap URL is updated. Default value: 3600 Minimum value = 300 Maximum value = 86400
trapurllength	<Integer>	Read-write	Length of the auto-generated trap URL. Default value: 32 Minimum value = 10 Maximum value = 255
proxyusername	<String>	Read-write	Proxy Username. Minimum length = 1
proxypassword	<String>	Read-write	Password with which user logs on. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
builtin	<String[]>	Read-only	Flag to determine if bot engine setting is built-in or not. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.

Operations

(click to see Properties)

- UPDATE
- UNSET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.
- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/botsettings **HTTP Method:** PUT

```

botsignature

Configuration for bot signatures resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
src	<String>	Read-write	Local path to and name of, or URL (protocol, host, path, and file name) for, the file in which to store the imported signature file. NOTE: The import fails if the object to be imported is on an HTTPS server that requires client certificate authentication for access. Minimum length = 1 Maximum length = 2047
name	<String>	Read-write	Name to assign to the bot signature file object on the Citrix ADC. Minimum length = 1 Maximum length = 31

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
comment	<String>	Read-write	Any comments to preserve information about the signature file object. Maximum length = 128
overwrite	<Boolean>	Read-write	Overwrites the existing file.
response	<String>	Read-only	.
_nextgenapiresource	<String>	Read-only	.

Operations

(click to see Properties)

- IMPORT
- DELETE
- CHANGE
- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

IMPORT

URL: http:// <netscaler-ip-address> /nitro/v1/config/botsignature? **action=Import HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"botsignature":{

"src":<String_value>,

<b>"name":<String_value>,

</b>"comment":<String_value>,

"overwrite":<Boolean_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/botsignature/ name_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

CHANGE

URL: http:// <netscaler-ip-address> /nitro/v1/config/botsignature? **action=update HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"botsignature":{

<b>"name":<String_value>

</b>}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/botsignature **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "botsignature": [ {

"name":<String_value>,

"response":<String_value>,

"src":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/botsignature/ name_value<String> **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/botsignature/ name_value<String> ? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

view http:// <netscaler-ip-address> /nitro/v1/config/botsignature/ name_value<String> ? **view=summary**

Use this query-parameter to get the summary output of botsignature resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "botsignature": [ {

"name":<String_value>,

"response":<String_value>,

"src":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

cache

Integrated Caching

Integrated Caching Configuration. The Integrated Caching feature is used to cache static and dynamic web application data.

NAME	DESCRIPTION
cachecontentgroup	Configuration for Integrated Cache content group

NAME	DESCRIPTION
cacheforwardproxy	Configuration for forward proxy
cacheglobal_binding	Binding object showing the resources that can be bound to cacheglobal
cacheglobal_cachepolicy_binding	Binding object showing the cachepolicy that can be bound to cacheglobal
cacheobject	Configuration for cache object
cacheparameter	Configuration for cache parameter
cachepolicy	Configuration for Integrated Cache policy
cachepolicy_binding	Binding object showing the resources that can be bound to cachepolicy
cachepolicy_cacheglobal_binding	Binding object showing the cacheglobal that can be bound to cachepolicy
cachepolicy_cachepolicylabel_binding	Binding object showing the cachepolicylabel that can be bound to cachepolicy
cachepolicy_csvserver_binding	Binding object showing the csvserver that can be bound to cachepolicy
cachepolicy_lbvserver_binding	Binding object showing the lbvserver that can be bound to cachepolicy
cachepolicylabel	Configuration for cache policy label

NAME	DESCRIPTION
cachepolicylabel_binding	Binding object showing the resources that can be bound to cachepolicylabel
cachepolicylabel_cachepolicy_binding	Binding object showing the cachepolicy that can be bound to cachepolicylabel
cachepolicylabel_policybinding_binding	Binding object showing the policybinding that can be bound to cachepolicylabel
cacheselector	Configuration for cache selector

cachecontentgroup

Configuration for Integrated Cache content group resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the content group. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after the content group is created.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1
weakposrelexpiry	<Integer>	Read-write	Relative expiry time, in seconds, for expiring positive responses with response codes between 200 and 399. Cannot be used in combination with other Expiry attributes. Similar to -relExpiry but has lower precedence. Minimum value = 0 Maximum value = 31536000
heurexpiryparam	<Integer>	Read-write	Heuristic expiry time, in percent of the duration, since the object was last modified. Minimum value = 0 Maximum value = 100
relexpiry	<Integer>	Read-write	Relative expiry time, in seconds, after which to expire an object cached in this content group. Minimum value = 0 Maximum value = 31536000
relexpirymillisec	<Integer>	Read-write	Relative expiry time, in milliseconds, after

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			which to expire an object cached in this content group. Minimum value = 0 Maximum value = 86400000
absexpiry	<String[]>	Read-write	Local time, up to 4 times a day, at which all objects in the content group must expire. CLI Users: For example, to specify that the objects in the content group should expire by 11:00 PM, type the following command: add cache contentgroup <contentgroup name> -absexpiry 23:00 To specify that the objects in the content group should expire at 10:00 AM, 3 PM, 6 PM, and 11:00 PM, type: add cache contentgroup <contentgroup name> -absexpiry

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			10:00 15:00 18:00 23:00.
absexpirygmt	<String[]>	Read-write	Coordinated Universal Time (GMT), up to 4 times a day, when all objects in the content group must expire.
weaknegrelexpiry	<Integer>	Read-write	Relative expiry time, in seconds, for expiring negative responses. This value is used only if the expiry time cannot be determined from any other source. It is applicable only to the following status codes: 307, 403, 404, and 410. Minimum value = 0 Maximum value = 31536000
hitparams	<String[]>	Read-write	Parameters to use for parameterized hit evaluation of an object. Up to 128 parameters can be specified. Mutually exclusive with the Hit Selector parameter. Minimum length = 1
invalparams	<String[]>	Read-write	Parameters for parameterized invalidation of an

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			object. You can specify up to 8 parameters. Mutually exclusive with invalSelector. Minimum length = 1
ignoreparamvaluecase	<String>	Read-write	Ignore case when comparing parameter values during parameterized hit evaluation. (Parameter value case is ignored by default during parameterized invalidation.). Possible values = YES, NO
matchcookies	<String>	Read-write	Evaluate for parameters in the cookie header also. Possible values = YES, NO
invalrestrictedtohost	<String>	Read-write	Take the host header into account during parameterized invalidation. Possible values = YES, NO
polleverytime	<String>	Read-write	Always poll for the objects in this content group. That is, retrieve the objects from the origin server

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			whenever they are requested. Default value: NO Possible values = YES, NO
ignorereloadreq	<String>	Read-write	Ignore any request to reload a cached object from the origin server. To guard against Denial of Service attacks, set this parameter to YES. For RFC-compliant behavior, set it to NO. Default value: YES Possible values = YES, NO
removecookies	<String>	Read-write	Remove cookies from responses. Default value: YES Possible values = YES, NO
prefetch	<String>	Read-write	Attempt to refresh objects that are about to go stale. Default value: YES Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
prefetchperiod	<Integer>	Read-write	Time period, in seconds before an object's calculated expiry time, during which to attempt prefetch. Minimum value = 0 Maximum value = 4294967294
prefetchperiodmillisec	<Integer>	Read-write	Time period, in milliseconds before an object's calculated expiry time, during which to attempt prefetch. Minimum value = 0 Maximum value = 4294967290
prefetchmaxpending	<Integer>	Read-write	Maximum number of outstanding prefetches that can be queued for the content group. Minimum value = 0 Maximum value = 4294967294
flashcache	<String>	Read-write	Perform flash cache. Mutually exclusive with Poll Every Time (PET) on the same content group. Default value: NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
expireatlastbyte	<String>	Read-write	Force expiration of the content immediately after the response is downloaded (upon receipt of the last byte of the response body). Applicable only to positive responses. Default value: NO Possible values = YES, NO
insertvia	<String>	Read-write	Insert a Via header into the response. Default value: YES Possible values = YES, NO
insertage	<String>	Read-write	Insert an Age header into the response. An Age header contains information about the age of the object, in seconds, as calculated by the integrated cache. Default value: YES Possible values = YES, NO
insertetag	<String>	Read-write	Insert an ETag header in the response. With ETag

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			header insertion, the integrated cache does not serve full responses on repeat requests. Default value: YES Possible values = YES, NO
cachecontrol	<String>	Read-write	Insert a Cache-Control header into the response. Minimum length = 1
quickabortsize	<Integer>	Read-write	If the size of an object that is being downloaded is less than or equal to the quick abort value, and a client aborts during the download, the cache stops downloading the response. If the object is larger than the quick abort size, the cache continues to download the response. Default value: 4194303 Minimum value = 0 Maximum value = 4194303
minressize	<Integer>	Read-write	Minimum size of a response that can be

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			cached in this content group. Default minimum response size is 0. Minimum value = 0 Maximum value = 2097151
maxressize	<Integer>	Read-write	Maximum size of a response that can be cached in this content group. Default value: 80 Minimum value = 0 Maximum value = 2097151
memlimit	<Integer>	Read-write	Maximum amount of memory that the cache can use. The effective limit is based on the available memory of the Citrix ADC. Default value: 65536
ignorereqcachinghdrs	<String>	Read-write	Ignore Cache-Control and Pragma headers in the incoming request. Default value: YES Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
minhits	<Integer>	Read-write	Number of hits that qualifies a response for storage in this content group. Default value: 0
alwaysevalpolicies	<String>	Read-write	Force policy evaluation for each response arriving from the origin server. Cannot be set to YES if the Prefetch parameter is also set to YES. Default value: NO Possible values = YES, NO
persistha	<String>	Read-write	Setting persistHA to YES causes IC to save objects in contentgroup to Secondary node in HA deployment. Default value: NO Possible values = YES, NO
pinned	<String>	Read-write	Do not flush objects from this content group under memory pressure. Default value: NO Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
lazydnsresolve	<String>	Read-write	Perform DNS resolution for responses only if the destination IP address in the request does not match the destination IP address of the cached response. Default value: YES Possible values = YES, NO
hitselector	<String>	Read-write	Selector for evaluating whether an object gets stored in a particular content group. A selector is an abstraction for a collection of PIXL expressions.
invalselector	<String>	Read-write	Selector for invalidating objects in the content group. A selector is an abstraction for a collection of PIXL expressions.
type	<String>	Read-write	The type of the content group. Default value: HTTP Possible values = HTTP, MYSQL, MSSQL

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
query	<String>	Read-write	Query string specifying individual objects to flush from this group by using parameterized invalidation. If this parameter is not set, all objects are flushed from the group. Minimum length = 1
host	<String>	Read-write	Flush only objects that belong to the specified host. Do not use except with parameterized invalidation. Also, the Invalidation Restricted to Host parameter for the group must be set to YES. Minimum length = 1
selectorvalue	<String>	Read-write	Value of the selector to be used for flushing objects from the content group. Requires that an invalidation selector be configured for the content group. Minimum length = 1
tosecondary	<String>	Read-write	content group whose objects are to be sent to secondary. Default value: NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
flags	<Integer>	Read-only	Flags.
prefetchcur	<Integer>	Read-only	Current outstanding prefetches.
memusage	<Integer>	Read-only	Current memory usage.
memdusage	<Integer>	Read-only	Current disk memory usage.
disklimit	<Integer>	Read-only	Maximum amount of disk that the cache can use. The effective limit is based on the available memory of the Citrix ADC. Default value: 0
cachenon304hits	<Integer>	Read-only	Cache non 304 hits.
cache304hits	<Integer>	Read-only	Cache 304 hits.
cachecells	<Integer>	Read-only	Number of cells.
cachegroupincarnation	<Integer>	Read-only	Cache group incarnation.
persist	<String>	Read-only	Setting persist to YES causes IC to save objects in contentgroup to disk. Default value: NO Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String[]>	Read-only	Active cache policies refering to this group.
cachenuminvalpolicy	<Integer>	Read-only	Number of active Invalidation policies refering to this group.
markercells	<Integer>	Read-only	Numbers of marker cells in this group.
builtin	<String[]>	Read-only	. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/cachecontentgroup? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cachecontentgroup": [ { "__count": "#no"} ] }
```

cacheforwardproxy

Configuration for forward proxy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ipaddress	<String>	Read-write	IP address of the Citrix ADC or a cache server for which the cache acts as a proxy. Requests coming to the Citrix ADC with the configured IP address are forwarded to the particular address, without involving the Integrated Cache in any way. Minimum length = 1
port	<Integer>	Read-write	Port on the Citrix ADC or a server for which the cache acts as a proxy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 1 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/cacheforwardproxy **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cacheforwardproxy":{

<b>"ipaddress":<String_value>,

</b><b>"port":<Integer_value>

</b>}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/cacheforwardproxy/ ipaddress_value<String>
Query-parameters: args= port:<Integer_value>

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cacheforwardproxy **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/cacheforwardproxy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/cacheforwardproxy? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of cacheforwardproxy resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/cacheforwardproxy? **view=summary**

Use this query-parameter to get the summary output of cacheforwardproxy resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/cacheforwardproxy? **pagesize=#no;pageno=#no**

Use this query-parameter to get the cacheforwardproxy resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cacheforwardproxy": [ {

"ipaddress":<String_value>,

"port":<Integer_value>,

"_nextgenapiresource":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/cacheforwardproxy? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cacheforwardproxy": [ { "__count": "#no"} ] }
```

cacheglobal_binding

Binding object which returns the resources bound to cacheglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cacheglobal_cachepolicy_binding	<cacheglobal_cachepolicy_binding[]>	Read-write	cachepolicy that can be bound to cacheglobal.

Operations

(click to see Properties)

- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cacheglobal_binding

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response:

HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cacheglobal_binding": [ {

"cacheglobal_cachepolicy_binding":<cacheglobal_cachepolicy_binding[]_value
>

}]}
```

cacheglobal_cachepolicy_binding

Binding object showing the cachepolicy that can be bound to cacheglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Specifies the priority of the policy.
labeltype	<String>	Read-write	Type of policy label to invoke. Possible values = reqvserver, resvserver, policylabel
labelname	<String>	Read-write	Name of the label to invoke if the current policy rule evaluates to TRUE. (To invoke a label associated with a virtual server, specify the name of the virtual server.).
precededefrules	<String>	Read-write	Specify whether this policy should be evaluated. Default value: NO Possible values = YES, NO
type	<String>	Read-write	The bind point to which policy is bound. When you specify the type, detailed information about that bind point appears. Possible values = REQ_OVERRIDE, REQ_DEFAULT, RES_OVERRIDE, RES_DEFAULT,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			HTTPQUIC_REQ_OVERRIDE, HTTPQUIC_REQ_DEFAULT, HTTPQUIC_RES_OVERRIDE, HTTPQUIC_RES_DEFAULT
invoke	<Boolean>	Read-write	Invoke policies bound to a virtual server or a user-defined policy label. After the invoked policies are evaluated, the flow returns to the policy with the next priority. Applicable only to default-syntax policies.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
policy	<String>	Read-write	Name of the cache policy.
globalbindtype	<String>	Read-write	. Default value: SYSTEM_GLOBAL Possible values = SYSTEM_GLOBAL, VPN_GLOBAL,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			RNAT_GLOBAL, APPFW_GLOBAL, TM_GLOBAL
numpol	<Integer>	Read-only	The number of policies bound to the bindpoint.
flowtype	<Integer>	Read-only	flowtype of the bound cache policy.
__count	<Double>	Read-only	count parameter

Operations

Response Payload:

```
{ "cacheglobal_cachepolicy_binding": [ { "__count": "#no"} ] }
```

cacheobject

Configuration for cache object resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
url	<String>	Read-write	URL of the particular object whose details is required. Parameter "host" must be specified along with the URL. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
locator	<Integer>	Read-write	ID of the cached object.
httpstatus	<Integer>	Read-write	HTTP status of the object.
host	<String>	Read-write	Host name of the object. Parameter "url" must be specified. Minimum length = 1
port	<Integer>	Read-write	Host port of the object. You must also set the Host parameter. Default value: 80 Minimum value = 1
groupname	<String>	Read-write	Name of the content group to which the object belongs. It will display only the objects belonging to the specified content group. You must also set the Host parameter.
httpmethod	<String>	Read-write	HTTP request method that caused the object to be stored. Default value: GET Possible values = GET, POST

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
group	<String>	Read-write	Name of the content group whose objects should be listed.
ignoremarkerobjects	<String>	Read-write	Ignore marker objects. Marker objects are created when a response exceeds the maximum or minimum response size for the content group or has not yet received the minimum number of hits for the content group. Possible values = ON, OFF
includenotreadyobjects	<String>	Read-write	Include responses that have not yet reached a minimum number of hits before being cached. Possible values = ON, OFF
nodeid	<Integer>	Read-write	Unique number that identifies the cluster node. Minimum value = 0 Maximum value = 31
tosecondary	<String>	Read-write	Object will be saved onto Secondary. Default value: NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
cacheressize	<Integer>	Read-only	Cache response size of the object.
cachereshdrsize	<Integer>	Read-only	Cache response header size of the object.
cacheetag	<String>	Read-only	Cache ETag of the object.
httpstatusoutput	<Integer>	Read-only	HTTP status of the object.
cachereslastmod	<String>	Read-only	Value of "Last-modified" header.
cachecontrol	<String>	Read-only	Cache-Control header of the object.
cacheresdate	<String>	Read-only	Value of "Date" header.
contentgroup	<String>	Read-only	Name of the contentgroup in which it is stored.
destipv46	<String>	Read-only	Destination IP.
destport	<Integer>	Read-only	Destination Port. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachecellcomplex	<String>	Read-only	The state of the parameterized caching on this cell. Possible values = YES, NO
hitparams	<String[]>	Read-only	Parameterized hit evaluation of an object.
hitvalues	<String[]>	Read-only	Values of hitparams for this object.
cachecellreqtime	<Integer>	Read-only	Required time of the cache cell object.
cachecellrestime	<Integer>	Read-only	Response time to the cache cell object.
cachecurage	<Integer>	Read-only	Current age of the cache object.
cachecellexpires	<Integer>	Read-only	Expiry time of the cache cell object in seconds.
cachecellexpiresmillisec	<Integer>	Read-only	Expiry time of the cache cell object in milliseconds.
flushed	<String>	Read-only	Specifies whether the object is flushed. Possible values = YES, NO
prefetch	<String>	Read-only	Specifies whether Integrated Cache should attempt to refresh an object immediately before it goes stale.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
prefetchperiod	<Integer>	Read-only	The duration in seconds of the period during which prefetch should be attempted, immediately before the object's calculated expiry time.
prefetchperiodmillisec	<Integer>	Read-only	The duration in milliseconds of the period during which prefetch should be attempted, immediately before the object's calculated expiry time.
cachecellcurreaders	<Integer>	Read-only	Current readers of the cache cell object.
cachecellcurmisses	<Integer>	Read-only	Current misses of the cache cell object.
cachecellhits	<Integer>	Read-only	Cache cell hits.
cachecellmisses	<Integer>	Read-only	Cache cell misses.
cachecelldhits	<Integer>	Read-only	Cache cell disk hits.
cachecellcompressionformat	<String>	Read-only	Compression format of this object. Identity means not compressed.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachecellappfwmetadataexists	<String>	Read-only	AppFirewall cache object. Possible values = YES, NO
cachecellhttp11	<String>	Read-only	The state of the response to be HTTP/1.1. Possible values = YES, NO
cachecellweaketag	<String>	Read-only	The state of the weak HTTP Entity Tag in the cell. Possible values = YES, NO
cachecellresbadsize	<String>	Read-only	The marked state of the cell. Possible values = YES, NO
markerreason	<String>	Read-only	Reason for marking the cell. Possible values = Waiting for min hit, Response header is too big, Content-length header said response size is not in group size limit, Content-length response received more data, Content-length response received less data, Content-length response data is not

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			in group size limit, Chunk response received more data, Chunk response data is not in group size limit, Bad chunk format, Fin terminated response data is not in group size limit
cachecellpolleverytime	<String>	Read-only	The state to poll every time on object. Possible values = YES, NO
cachecelletaginserted	<String>	Read-only	The state of the ETag to be inserted by IC for this object. Possible values = YES, NO
cachecellreadywithlastbyte	<String>	Read-only	The state of the complete arrived response. Possible values = YES, NO
cacheinmemory	<String>	Read-only	The cache data is available in memory. Possible values = YES, NO
cacheindisk	<String>	Read-only	The cache data is available in disk. Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cacheinsecondary	<String>	Read-only	The cache data is available in secondary in HA deployment. Possible values = YES, NO
cachedirname	<String>	Read-only	The directory name used if saved.
cachefilename	<String>	Read-only	The filename used if saved.
cachecelldestipverified	<String>	Read-only	The state of DNS verification. Possible values = YES, NO
cachecellfwpxyobj	<String>	Read-only	The state of the object to be stored on a request to a forward proxy. Possible values = YES, NO
cachecellbasefile	<String>	Read-only	The state of delta being used as a basefile. Possible values = YES, NO
cachecellminhitflag	<String>	Read-only	The state of the minhit feature on this cell. Possible values = YES, NO
cachecellminhit	<Integer>	Read-only	Min hit value for the object.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policy	<Integer>	Read-only	Policy info for the object.
policyname	<String>	Read-only	Policy which created the object.
selectorname	<String[]>	Read-only	The hit selector for the object.
rule	<String[]>	Read-only	Selectors for this object.
selectorvalue	<String[]>	Read-only	The HTTP request method that caused the object to be stored.
cacheurls	<String>	Read-only	List of cache object URLs.
warnbucketskip	<Integer>	Read-only	Bucket skipped warning.
totalobjs	<Integer>	Read-only	Total objects.
httpcalloutcell	<String>	Read-only	Is it a http callout cell ?. Possible values = YES, NO
httpcalloutname	<String>	Read-only	Name of the http callout.
returntype	<String>	Read-only	Return type of the http callout. Possible values = BOOL, NUM, TEXT
httpcalloutresult	<String>	Read-only	First few bytes of http callout response.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
locatorshow	<Integer>	Read-only	ID of the cached object.
ceflags	<Integer>	Read-only	Indicates state and type of cached cell.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- GET (ALL)
- COUNT
- EXPIRE
- FLUSH
- SAVE

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

EXPIRE

URL: http:// <netscaler-ip-address> /nitro/v1/config/cacheobject? **action=expire HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cacheobject":{

"locator":<Integer_value>,

"url":<String_value>,

"host":<String_value>,

"port":<Integer_value>,

"groupname":<String_value>,

"httpmethod":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

FLUSH

URL: http:// <netscaler-ip-address> /nitro/v1/config/cacheobject? **action=flush HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cacheobject":{

"locator":<Integer_value>,

"url":<String_value>,

"host":<String_value>,

"port":<Integer_value>,

"groupname":<String_value>,

"httpmethod":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

SAVE

URL: http:// <netscaler-ip-address> /nitro/v1/config/cacheobject? **action=save HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cacheobject":{

"locator":<Integer_value>,

"tosecondary":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cacheobject **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/cacheobject? **args=url: <String_value> ,locator: <Integer_value> ,httpstatus: <Integer_value> ,host: <String_value> ,port: <Integer_value> ,groupname: <String_value> ,httpmethod: <String_value> ,group: <String_value> ,ignoremarkerobjects: <String_value> ,includenotreadyobjects: <String_value> ,nodeid: <Integer_value>**

Use this query-parameter to get cacheobject resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/config/cacheobject? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/cacheobject? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of cacheobject resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/cacheobject? **view=summary**

Use this query-parameter to get the summary output of cacheobject resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/cacheobject?
pagesize=#no;pageno=#no

Use this query-parameter to get the cacheobject resources in chunks.

HTTP Method: GET

Request Headers:

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cacheobject": [ { "__count": "#no"} ] }
```

cacheparameter

Configuration for cache parameter resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
memlimit	<Integer>	Read-write	Amount of memory available for storing the cache objects. In practice, the amount of memory available for caching can be less than half the total memory of the Citrix ADC.
via	<String>	Read-write	String to include in the Via header. A Via header is inserted into all responses served from a content group if its Insert Via flag is set. Minimum length = 1
verifyusing	<String>	Read-write	Criteria for deciding whether a cached object can be served for an incoming HTTP request.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Available settings function as follows: HOSTNAME - The URL, host name, and host port values in the incoming HTTP request header must match the cache policy. The IP address and the TCP port of the destination host are not evaluated. Do not use the HOSTNAME setting unless you are certain that no rogue client can access a rogue server through the cache. HOSTNAME_AND_IP - The URL, host name, host port in the incoming HTTP request header, and the IP address and TCP port of the destination server, must match the cache policy. DNS - The URL, host name and host port in the incoming

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			HTTP request, and the TCP port must match the cache policy. The host name is used for DNS lookup of the destination server's IP address, and is compared with the set of addresses returned by the DNS lookup. Possible values = HOSTNAME, HOSTNAME_AND_IP, DNS
maxpostlen	<Integer>	Read-write	Maximum number of POST body bytes to consider when evaluating parameters for a content group for which you have configured hit parameters and invalidation parameters. Default value: 4096 Minimum value = 0 Maximum value = 131072
prefetchmaxpending	<Integer>	Read-write	Maximum number of outstanding

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			prefetches in the Integrated Cache.
enablebypass	<String>	Read-write	Evaluate the request-time policies before attempting hit selection. If set to NO, an incoming request for which a matching object is found in cache storage results in a response regardless of the policy configuration. If the request matches a policy with a NOCACHE action, the request bypasses all cache processing. This parameter does not affect processing of requests that match any invalidation policy. Possible values = YES, NO
undefaction	<String>	Read-write	Action to take when a policy cannot be evaluated. Possible values = NOCACHE, RESET

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
enablehaobjpersist	<String>	Read-write	The HA object persisting parameter. When this value is set to YES, cache objects can be synced to Secondary in a HA deployment. If set to NO, objects will never be synced to Secondary node. Default value: NO Possible values = YES, NO
cacheevictionpolicy	<String>	Read-write	The cacheEvictionPolicy determines the threshold for preemptive eviction of cache objects using the LRU (Least Recently Used) algorithm. If set to AGGRESSIVE, eviction is triggered when free cache memory drops to 40%. MODERATE triggers eviction at 25%, and RELAXED triggers eviction at 10%. Default value: RELAXED Possible values = RELAXED, MODERATE, AGGRESSIVE

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
disklimit	<Integer>	Read-only	The disk limit for the Integrated Cache.
maxdisklimit	<Integer>	Read-only	The maximum value of the memory limit for the Integrated Cache.
memlimitactive	<Integer>	Read-only	Active value of the memory limit for the Integrated Cache.
maxmemlimit	<Integer>	Read-only	The maximum value of the memory limit for the Integrated Cache.
prefetchcur	<Integer>	Read-only	Number of current outstanding prefetches in the IC.
_nextgenapiresource	<String>	Read-only	.

Operations

(click to see Properties)

- UPDATE
- UNSET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/cacheparameter **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cacheparameter":{

"memlimit":<Integer_value>,

"via":<String_value>,

"verifyusing":<String_value>,

"maxpostlen":<Integer_value>,

"prefetchmaxpending":<Integer_value>,

}]}
```

cachepolicy

Configuration for Integrated Cache policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Name for the policy. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			characters. Can be changed after the policy is created. Minimum length = 1
rule	<String>	Read-write	Expression against which the traffic is evaluated. The following requirements apply only to the Citrix ADC CLI: * If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation marks, escape the quotations by using the \ character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
action	<String>	Read-write	Action to apply to content that matches the policy. * CACHE or MAY_CACHE action - positive cachability policy * NOCACHE or MAY_NOCACHE action - negative cachability policy * INVAL action - Dynamic Invalidation Policy. Possible values = CACHE, NOCACHE, MAY_CACHE, MAY_NOCACHE, INVAL
storeingroup	<String>	Read-write	Name of the content group in which to store the object when the final result of policy evaluation is CACHE. The content group must exist before being mentioned here. Use the "show cache contentgroup" command to view the list of existing content groups. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
invalgroups	<String[]>	Read-write	Content group(s) to be invalidated when the INVAL action is applied. Maximum number of content groups that can be specified is 16. Minimum length = 1
invalobjects	<String[]>	Read-write	Content groups(s) in which the objects will be invalidated if the action is INVAL. Minimum length = 1
undefaction	<String>	Read-write	Action to be performed when the result of rule evaluation is undefined. Possible values = NOCACHE, RESET
newname	<String>	Read-write	New name for the cache policy. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Minimum length = 1
hits	<Integer>	Read-only	Hits.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
undefhits	<Integer>	Read-only	Number of Undef hits.
flags	<Integer>	Read-only	Flag.
builtin	<String[]>	Read-only	. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

```

cachepolicy_binding

Binding object which returns the resources bound to cachepolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Name of the cache policy about which to display details. Minimum length = 1
cachepolicy_lbvserver_binding	<cachepolicy_lbvserver_binding[]>	Read-only	lbvserver that can be bound to cachepolicy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachepolicy_cachegl obal_binding	<cachepolicy_cache global_binding[]>	Read-only	cacheglobal that can be bound to cachepolicy.
cachepolicy_cachep olicylabel_binding	<cachepolicy_cache policylabel_binding[] >	Read-only	cachepolicylabel that can be bound to cachepolicy.
cachepolicy_csvserv er_binding	<cachepolicy_csvser ver_binding[]>	Read-only	csvserver that can be bound to cachepolicy.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cachepolicy_binding/ policyname_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cachepolicy_binding": [ {

"policyname":<String_value>,

"cachepolicy_csvserver_binding":<cachepolicy_csvserver_binding[]_value>,

"cachepolicy_lbvserver_binding":<cachepolicy_lbvserver_binding[]_value>,

"cachepolicy_cacheglobal_binding":<cachepolicy_cacheglobal_binding[]_value
>,

"cachepolicy_cachepolicylabel_binding":<cachepolicy_cachepolicylabel_bindi
ng[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cachepolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/cachepolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cachepolicy_binding": [ {

"policyname":<String_value>,

"cachepolicy_csvserver_binding":<cachepolicy_csvserver_binding[]_value>,

"cachepolicy_lbvserver_binding":<cachepolicy_lbvserver_binding[]_value>,

"cachepolicy_cacheglobal_binding":<cachepolicy_cacheglobal_binding[]_value
>,

"cachepolicy_cachepolicylabel_binding":<cachepolicy_cachepolicylabel_bindi
ng[]_value>

}]}
```

cachepolicy_cacheglobal_binding

Binding object showing the cacheglobal that can be bound to cachepolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Name of the cache policy about which to display details. Minimum length = 1
boundto	<String>	Read-write	Location where policy is bound.
priority	<Integer>	Read-only	Priority.
labeltype	<String>	Read-only	Type of policy label invocation. Possible values = reqvserver, resvserver, policylabel
activepolicy	<Integer>	Read-only	Indicates whether policy is bound or not.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
labelname	<String>	Read-only	Name of the label to invoke if the current policy rule evaluates to TRUE.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-only	count parameter

cachepolicylabel

Configuration for cache policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name for the label. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Can be changed after the label is created.
evaluates	<String>	Read-write	When to evaluate policies bound to this label: request-time or response-time. Possible values = REQ, RES, MSSQL_REQ, MSSQL_RES, MYSQL_REQ, MYSQL_RES, HTTPQUIC_REQ, HTTPQUIC_RES

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
newname	<String>	Read-write	New name for the cache-policy label. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Minimum length = 1
numpol	<Integer>	Read-only	Number of polices bound to label.
hits	<Integer>	Read-only	Number of times policy label was invoked.
priority	<Integer>	Read-only	Specifies the priority of the policy.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
labeltype	<String>	Read-only	Type of policy label to invoke: an unnamed label associated with a virtual server, or user-defined policy label.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = reqvserver, resvserver, policylabel
invoke_labelname	<String>	Read-only	Name of the policy label to invoke if the current policy rule evaluates to TRUE.
flowtype	<Integer>	Read-only	Flowtype of the bound cache policy.
builtin	<String[]>	Read-only	. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel/ labelname_value<String>
HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

RENAME

URL: http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel? **action=rename HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cachepolicylabel":{

<b>"labelname":<String_value>,

</b><b>"newname":<String_value>

</b>}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of cachepolicylabel resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel? **view=summary**

Use this query-parameter to get the summary output of cachepolicylabel resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel? **pagesize=#no;pageno=#no**

Use this query-parameter to get the cachepolicylabel resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cachepolicylabel": [ {

"labelname":<String_value>,

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cachepolicylabel": [ { "__count": "#no"} ] }
```

cachepolicylabel_binding

Binding object which returns the resources bound to cachepolicylabel.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name of the cache-policy label about which to display information.
cachepolicylabel_policybinding_binding	<cachepolicylabel_policybinding_binding[]>	Read-only	policybinding that can be bound to cachepolicylabel.
cachepolicylabel_cachepolicy_binding	<cachepolicylabel_cachepolicy_binding[]>	Read-only	cachepolicy that can be bound to cachepolicylabel.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel_binding/ labelname_value<String>

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response:

HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cachepolicylabel_binding": [ {

"labelname":<String_value>,

"cachepolicylabel_cachepolicy_binding":<cachepolicylabel_cachepolicy_binding[]_value>,

"cachepolicylabel_policybinding_binding":<cachepolicylabel_policybinding_binding[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel_binding

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters:

bulkbindings

http:// <netscaler-ip-address> /nitro/v1/config/cachepolicylabel_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response:

HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cachepolicylabel_binding": [ {

"labelname":<String_value>,

"cachepolicylabel_cachepolicy_binding":<cachepolicylabel_cachepolicy_bindi
ng[]_value>,

"cachepolicylabel_policybinding_binding":<cachepolicylabel_policybinding_b
inding[]_value>
```

```
}]}
```

cachepolicylabel_cachepolicy_binding

Binding object showing the cachepolicy that can be bound to cachepolicylabel.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
invoke_labelname	<String>	Read-write	Name of the policy label to invoke if the current policy rule evaluates to TRUE.
policyname	<String>	Read-write	Name of the cache policy to bind to the policy label.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
invoke	<Boolean>	Read-write	Invoke policies bound to a virtual server or a user-defined policy label. After the invoked policies are evaluated, the flow returns to the policy with the next-lower priority.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labeltype	<String>	Read-write	Type of policy label to invoke: an unnamed label associated with a virtual server, or user-defined policy label. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-write	Specifies the priority of the policy.
labelname	<String>	Read-write	Name of the cache policy label to which to bind the policy.
__count	<Double>	Read-write	count parameter

- ADD
- DELETE
- UPDATE
- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cloudallowedngsticketprofile":{

<b>"name":<String_value>,

</b>"creator":<String_value>
```

```
}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile/ name_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cloudallowedngsticketprofile":{

<b>"name":<String_value>,

</b>"creator":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of cloudallowedngsticketprofile resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile? **view=summary**

Use this query-parameter to get the summary output of cloudallowedngsticketprofile resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile? **pagesize=#no;pageno=#no**

Use this query-parameter to get the cloudallowedngsticketprofile resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cloudallowedngsticketprofile": [ {

"name":<String_value>,

"creator":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile/ name_value<String> **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/ cloudallowedngsticketprofile/ name_value<String> ? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

view http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile/ name_value<String> ? **view=summary**

Use this query-parameter to get the summary output of cloudallowedngsticketprofile resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "cloudallowedngsticketprofile": [ {

"name":<String_value>,

"creator":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/cloudallowedngsticketprofile? **count=yes**
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cloudallowedngsticketprofile": [ { "__count": "#no"} ] }
```

cloudautoscalegroup

Configuration for Cloud autoscalegroup resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	.
azcount	<Integer>	Read-only	Number of Availibility Zone this Autoscale Group is in.
aznames	<String[]>	Read-only	Availibility Zones this Autoscale Group is in.
graceful	<String>	Read-only	Autoscale down policy Set for this Autoscale group. Possible values = YES, NO
_nextgenapiresource	<String>	Read-only	.

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/cloudparaminternal **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cloudparaminternal":{

"nonftumode":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cloudparaminternal **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/cloudparaminternal? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/cloudparaminternal? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of cloudparaminternal resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/cloudparaminternal? **view=summary**

Use this query-parameter to get the summary output of cloudparaminternal resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/cloudparaminternal? **pagesize=#no;pageno=#no**

Use this query-parameter to get the cloudparaminternal resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```

cloudprofile

Configuration for cloud profile resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the Cloud profile. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after the profile is created. Minimum length = 1 Maximum length = 127
type	<String>	Read-write	Type of cloud profile that you want to create, Vserver or based on Azure Tags. Possible values = autoscale, azuretags
vservername	<String>	Read-write	Name for the virtual server. Must begin with an ASCII alphanumeric or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Can be changed after the virtual server is created. CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my vserver" or 'my vserver'). . Minimum length = 1
servicetype	<String>	Read-write	Protocol used by the service (also called the service type). Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, DNS, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP, RTSP,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			PUSH, SSL_PUSH, RADIUS, RDP, MYSQL, MSSQL, DIAMETER, SSL_DIAMETER, TFTP, ORACLE, SMPP, SYSLOGTCP, SYSLOGUDP, FIX, SSL_FIX, PROXY, USER_TCP, USER_SSL_TCP, QUIC, IPFIX, LOGSTREAM, MONGO, MONGO_TLS, MQTT, MQTT_TLS, QUIC_BRIDGE, HTTP_QUIC, DOT, SSL_PROXY, KAFKA_PRODUCER
ipaddress	<String>	Read-write	IPv4 or IPv6 address to assign to the virtual server.
port	<Integer>	Read-write	Port number for the virtual server. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicegroupname	<String>	Read-write	servicegroups bind to this server.
boundservicegroups vctype	<String>	Read-write	The type of bound service. Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, RPCSVR, DNS, ADNS, SNMP, RTSP, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP, ADNS_TCP, MYSQL, MSSQL, ORACLE, MONGO, MONGO_TLS, RADIUS, RADIUSListener, RDP, DIAMETER, SSL_DIAMETER, TFTP, SMPP, PPTP, GRE, SYSLOGTCP, SYSLOGUDP, FIX, SSL_FIX, USER_TCP, USER_SSL_TCP, QUIC, IPFIX, LOGSTREAM, LOGSTREAM_SSL, MQTT, MQTT_TLS, QUIC_BRIDGE, DOT, ADNS_DOT,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			HTTP_QUIC, ADNS_DOH, KAFKA_BROKER
vsvrbindsvcport	<Integer>	Read-write	The port number to be used for the bound service. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
graceful	<String>	Read-write	Indicates graceful shutdown of the service. System will wait for all outstanding connections to this service to be closed before disabling the service. Default value: NO Possible values = YES, NO
delay	<Integer>	Read-write	Time, in seconds, after which all the services configured on the server are disabled.
azuretagname	<String>	Read-write	Azure tag name. Maximum length = 512
azuretagvalue	<String>	Read-write	Azure tag value.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum length = 256
azurepollperiod	<Integer>	Read-write	Azure polling period (in seconds). Default value: 60 Minimum value = 60 Maximum value = 3600
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

cloudtunnelvserver

Configuration for Cloud Tunnel virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the Cloud Tunnel virtual server. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space,colon (:), at (@), equals (=), and hyphen (-) characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my server" or 'my server'). Minimum length = 1
servicetype	<String>	Read-write	ServiceType of Listener using which

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			traffic will be tunneled through cloud tunnel server. Possible values = TCP, UDP
listenpolicy	<String>	Read-write	String specifying the listen policy for the Cloud Tunnel virtual server. Can be either a named expression or an expression. The Cloud Tunnel virtual server processes only the traffic for which the expression evaluates to true. Default value: "none"
listenpriority	<Integer>	Read-write	Integer specifying the priority of the listen policy. A higher number specifies a lower priority. If a request matches the listen policies of more than one virtual server, the virtual server whose listen policy has the highest priority (the lowest priority number) accepts the request. Default value: 101 Minimum value = 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 100
state	<String>	Read-only	The current state of the virtual server, as UP, DOWN, BUSY, and so on. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
effectivestate	<String>	Read-only	. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
type	<String>	Read-only	The type of virtual server; for example, CONTENT based or ADDRESS based.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = CONTENT, ADDRESS
ip	<String>	Read-only	The Virtual IP address of the Cloud Tunnel virtual server.
ipv46	<String>	Read-only	IPv4 or IPv6 address of the Cloud Tunnel virtual server. Minimum length = 1
ippattern	<String>	Read-only	The IP pattern of the virtual server.
port	<Integer>	Read-only	Port on which the virtual server listens. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
range	<Integer>	Read-only	. Default value: 1 Minimum value = 1 Maximum value = 254
cachetype	<String>	Read-only	Virtual server cache type. The options are: TRANSPARENT, REVERSE, and FORWARD.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = TRANSPARENT, REVERSE, FORWARD
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

```

cluster

Cluster

Cluster commands.

NAME	DESCRIPTION
cluster	
clusterfiles	Configuration for files
clusterinstance	Configuration for cluster instance
clusterinstance_binding	Binding object showing the resources that can be bound to clusterinstance

NAME	DESCRIPTION
clusterinstance_clusternode_binding	Binding object showing the clusternode that can be bound to clusterinstance
clusternode	Configuration for cluster node
clusternode_binding	Binding object showing the resources that can be bound to clusternode
clusternode_routemonitor_binding	Binding object showing the routemonitor that can be bound to clusternode
clusternodegroup	Configuration for Node group object type
clusternodegroup_authenticationvserver_binding	Binding object showing the authenticationvserver that can be bound to clusternodegroup
clusternodegroup_binding	Binding object showing the resources that can be bound to clusternodegroup
clusternodegroup_clusternode_binding	Binding object showing the clusternode that can be bound to clusternodegroup
clusternodegroup_crvserver_binding	Binding object showing the crvserver that can be bound to clusternodegroup
clusternodegroup_csvserver_binding	Binding object showing the csvserver that can be bound to clusternodegroup
clusternodegroup_gslbsite_binding	Binding object showing the gslbsite that can be bound to clusternodegroup
clusternodegroup_gslbvserver_binding	Binding object showing the gslbvserver that can be bound to clusternodegroup
clusternodegroup_lbvserver_binding	Binding object showing the lbvserver that can be bound to clusternodegroup

NAME	DESCRIPTION
clusternodegroup_nslimitidentifier_binding	Binding object showing the nslimitidentifier that can be bound to clusternodegroup
clusternodegroup_service_binding	Binding object showing the service that can be bound to clusternodegroup
clusternodegroup_streamidentifier_binding	Binding object showing the streamidentifier that can be bound to clusternodegroup
clusternodegroup_vpnvserver_binding	Binding object showing the vpnvserver that can be bound to clusternodegroup
clusterpropstatus	
clustersync	Configuration for sync
clustersyncfailures	Configuration for Cluster sync failures

cluster

Configuration for 0 resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clip	<String>	Read-write	Cluster IP address to which to add the node.
password	<String>	Read-write	Password for the nsroot account of the configuration coordinator (CCO).

Operations

(click to see Properties)

- JOIN

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

JOIN

URL: http:// <netscaler-ip-address> /nitro/v1/config/cluster? **action=join**

HTTP Method: POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cluster":{

<b>"clip":<String_value>,

</b><b>"password":<String_value>

</b>}}
```

Response:

HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

clusterfiles

Configuration for files resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mode	<String[]>	Read-write	The directories and files to be synchronized. The available settings function as follows: Mode Paths all /nsconfig/ssl/ /var/netscaler/ssl/ /var/vpn/bookmark/ /nsconfig/dns/

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			/nsconfig/monitors/ /nsconfig/nstemplates/ /nsconfig/ssh/ /nsconfig/rc.netscaler /nsconfig/resolv.conf /nsconfig/inetd.conf /nsconfig/syslog.conf /nsconfig/ntp.conf /nsconfig/httpd.conf /nsconfig/sshd_config /nsconfig/hosts /nsconfig/enckey /var/nslw.bin/etc/krb5.conf /var/nslw.bin/etc/krb5.keytab /var/lib/likewise/db/ /var/download/ /var/wi/tomcat/webapps/

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			/var/wi/tomcat/conf/Catalina/localhost/ /var/wi/java_home/lib/security/cacerts /var/wi/java_home/jre/lib/security/cacerts /var/netscaler/locdb/ ssl /nsconfig/ssl/ /var/netscaler/ssl/ bookmarks /var/vpn/bookmark/ dns /nsconfig/dns/ imports /var/download/ misc /nsconfig/license/ /nsconfig/rc.conf all_plus_misc Includes *all* files and /nsconfig/license/ and /nsconfig/rc.conf. Default value: all. Possible values = all, bookmarks, ssl, imports, misc, dns, krb, AAA,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			app_catalog, all_plus_misc, all_minus_misc

Operations

(click to see Properties)

- SYNC

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

SYNC

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusterfiles? **action=sync HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"clusterfiles":{

"mode":<String[]_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

clusterinstance

Configuration for cluster instance resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clid	<Integer>	Read-write	Unique number that identifies the cluster. Minimum value = 1 Maximum value = 128
deadinterval	<Integer>	Read-write	Amount of time, in seconds, after which nodes that do not respond to the heartbeats are assumed to be down.If the value is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			less than 3 sec, set the helloInterval parameter to 200 msec. Default value: 3 Minimum value = 1 Maximum value = 60
hellointerval	<Integer>	Read-write	Interval, in milliseconds, at which heartbeats are sent to each cluster node to check the health status.Set the value to 200 msec, if the deadInterval parameter is less than 3 sec. Default value: 200 Minimum value = 200 Maximum value = 1000
preemption	<String>	Read-write	Preempt a cluster node that is configured as a SPARE if an ACTIVE node becomes available. Default value: DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ENABLED, DISABLED
quorumtype	<String>	Read-write	Quorum Configuration Choices - "Majority" (recommended) requires majority of nodes to be online for the cluster to be UP. "None" relaxes this requirement. Default value: MAJORITY Possible values = MAJORITY, NONE
inc	<String>	Read-write	This option is required if the cluster nodes reside on different networks. Default value: DISABLED Possible values = ENABLED, DISABLED
processlocal	<String>	Read-write	By turning on this option packets destined to a service in a cluster will not under go any steering. Default value: DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ENABLED, DISABLED
retainconnectionsoncluster	<String>	Read-write	This option enables you to retain existing connections on a node joining a Cluster system or when a node is being configured for passive timeout. By default, this option is disabled. Default value: NO Possible values = YES, NO
backplanebasedview	<String>	Read-write	View based on heartbeat only on bkplane interface. Default value: DISABLED Possible values = ENABLED, DISABLED
syncstatusstrictmode	<String>	Read-write	strict mode for sync status of cluster. Depending on the the mode if there are any errors while applying config, sync status is displayed accordingly. By default the flag is disabled.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: DISABLED Possible values = ENABLED, DISABLED
dfdretainl2params	<String>	Read-write	flag to add ext l2 header during steering. By default the flag is disabled. Default value: DISABLED Possible values = ENABLED, DISABLED
clusterproxyarp	<String>	Read-write	This field controls the proxy arp feature in cluster. By default the flag is enabled. Default value: ENABLED Possible values = ENABLED, DISABLED
secureheartbeats	<String>	Read-write	By turning on this option cluster heartbeats will have security enabled. Default value: DISABLED Possible values = ENABLED, DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
nodegroup	<String>	Read-write	The node group in a Cluster system used for transition from L2 to L3.
adminstate	<String>	Read-only	Cluster Admin State. Default value: DISABLED Possible values = ENABLED, DISABLED
propstate	<String>	Read-only	Enable/Disable the execution of commands on the cluster. This will not impact the execution of commands on individual cluster nodes by using the NSIP. Default value: ENABLED Possible values = ENABLED, DISABLED
validmtu	<Integer>	Read-only	Correct MTU value that has to be set on backplane.
heterogeneousflag	<String>	Read-only	This field diplay if heterogeneous is detected in the cluster system. Default value: NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
operationalstate	<String>	Read-only	Cluster Operational State. Possible values = ENABLED, DISABLED
status	<String>	Read-only	Cluster Operational State. Possible values = DOWN, UP, PARTIAL-UP, UNKNOWN
rsskeymismatch	<Boolean>	Read-only	This argument is used to determine if there is a RSS key mismatch at cluster instance level.
penummismatch	<Boolean>	Read-only	This argument is used to determine if there is a PE number mismatch at cluster instance level.
nodegroupstatewarning	<Boolean>	Read-only	This argumnt is used to determind whether all the cluster nodes are bound to nodegroup with state set.
licensemismatch	<Boolean>	Read-only	This argument is used to determine if there is a License mismatch at cluster instance level.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
jumbonotsupported	<Boolean>	Read-only	This argument is used to determine if Jumbo framework is not supported at cluster instance level.
clustertunnelmodemismatch	<Boolean>	Read-only	This argument is used to determine if different tunnel mode configured on cluster nodes.
clusternoheartbeatonnode	<Boolean>	Read-only	HB is not seen on the backplane interface of member node.
clusternolinksetmbf	<Boolean>	Read-only	MBF is enabled but linkset is not configured .
clusternospottedip	<Boolean>	Read-only	There is no spotted SNIP or MIP.
clusterclipfailure	<Boolean>	Read-only	CLIP movement failure. CLIP is not attached to CCO.
clusterhbhmacerrordetected	<Boolean>	Read-only	There is cluster hb hmac error detected, it could be due to version mismatch.
nodepenummismatch	<Boolean>	Read-only	This argument is used to determine if there is a PE mismatch at cluster node level.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
operationalpropstate	<String>	Read-only	Cluster Operational Propagation State. Default value: ENABLED Possible values = UNKNOWN, ENABLED, DISABLED, AUTO DISABLED, AUTO DISABLED (Disk Encryption Mismatch)
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusterinstance? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "clusterinstance": [ { "__count": "#no"} ] }
```

clusterinstance_binding

Binding object which returns the resources bound to clusterinstance.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clid	<Integer>	Read-write	Unique number that identifies the cluster. Minimum value = 1 Maximum value = 128
clusterinstance_clusternode_binding	<clusterinstance_clusternode_binding[]>	Read-only	clusternode that can be bound to clusterinstance.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.
- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusterinstance_binding/ clid_value<Integer>
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "clusterinstance_binding": [ {

"clid":<Integer_value>,

"clusterinstance_clusternode_binding":<clusterinstance_clusternode_binding
[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusterinstance_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/clusterinstance_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "clusterinstance_binding": [ {

"clid":<Integer_value>,

"clusterinstance_clusternode_binding":<clusterinstance_clusternode_binding
[]_value>

}]}
```

clusterinstance_clusternode_binding

Binding object showing the clusternode that can be bound to clusterinstance.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
nodeid	<Integer>	Read-write	The unique number that identiies a cluster. Minimum value = 0 Maximum value = 31
clid	<Integer>	Read-write	Unique number that identifies the cluster. Minimum value = 1 Maximum value = 128
health	<String>	Read-only	Node Health state. Possible values = UNKNOWN, INIT, DOWN, UP, Some enabled and HAMON interfaces of the node are down, All interfaces of the node are down or disabled, SSL card(s) of the node have failed, Route Monitor(s) of the node have failed, Service state is being synchronized with the cluster, The backplane interface is either not set or it is down or is disabled, The CLAG

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			member(s) of the node are down, Persistence sessions are being synchronized with the cluster, The Syn Cookie is being synchronized with the cluster, Unknown Health, AAA keys are being sychronized with the cluster, Cluster health is not up due to config sync is in progress
clusterhealth	<String>	Read-only	Node clusterd state. Possible values = UP, Configurations of the node are lagging behind the cluster by more than 256 commands, The config sync operation has exceeded the time limit of 60 seconds, The config sync operation (full sync) is in progress, The node is not in sync with the cluster configurations as sync is disabled on

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			this node, The execution of a configuration command has failed on this node, UNKNOWN
state	<String>	Read-only	Active, Spare or Passive. An active node serves traffic. A spare node serves as a backup for active nodes. A passive node does not serve traffic. This may be useful during temporary maintenance activity where it is desirable that the node takes part in the consensus protocol, but not serve traffic. Default value: PASSIVE Possible values = ACTIVE, SPARE, PASSIVE
nodelicensemismatch	<Boolean>	Read-only	This argument is used to determine if there is a License mismatch at cluster node level.
islocalnode	<Boolean>	Read-only	This argument is used to determine whether it is local node.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ipaddress	<String>	Read-only	The IP Address of the node.
nodejumbonotsupported	<Boolean>	Read-only	This argument is used to determine if Jumbo framework not supported at cluster node level.
masterstate	<String>	Read-only	Master state. Possible values = INACTIVE, ACTIVE, UNKNOWN
isconfigurationcoordinator	<Boolean>	Read-only	This argument is used to determine whether the node is configuration coordinator (CCO).
nodersskeymismatch	<Boolean>	Read-only	This argument is used to determine if there is a RSS key mismatch at cluster node level.
effectivestate	<String>	Read-only	Node effective health state. Possible values = UP, NOT UP, UNKNOWN, INIT
__count	<Double>	Read-only	count parameter

clusternode

Configuration for cluster node resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
nodeid	<Integer>	Read-write	Unique number that identifies the cluster node. Minimum value = 0 Maximum value = 31
ipaddress	<String>	Read-write	Citrix ADC IP (NSIP) address of the appliance to add to the cluster. Must be an IPv4 address. Minimum length = 1
state	<String>	Read-write	Admin state of the cluster node. The available settings function as follows: ACTIVE - The node serves traffic. SPARE - The node does not serve traffic unless an ACTIVE node goes down.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			PASSIVE - The node does not serve traffic, unless you change its state. PASSIVE state is useful during temporary maintenance activities in which you want the node to take part in the consensus protocol but not to serve traffic. Default value: PASSIVE Possible values = ACTIVE, SPARE, PASSIVE
backplane	<String>	Read-write	Interface through which the node communicates with the other nodes in the cluster. Must be specified in the three-tuple form n/c/u, where n represents the node ID and c/u refers to the interface on the appliance. Minimum length = 1
priority	<Integer>	Read-write	Preference for selecting a node as the configuration

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			coordinator. The node with the lowest priority value is selected as the configuration coordinator. When the current configuration coordinator goes down, the node with the next lowest priority is made the new configuration coordinator. When the original node comes back up, it will preempt the new configuration coordinator and take over as the configuration coordinator. Note: When priority is not configured for any of the nodes or if multiple nodes have the same priority, the cluster elects one of the nodes as the configuration coordinator. Default value: 31 Minimum value = 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 31
nodegroup	<String>	Read-write	The default node group in a Cluster system. Default value: DEFAULT_NG Minimum length = 1
delay	<Integer>	Read-write	Applicable for Passive node and node becomes passive after this timeout (in minutes). Default value: 0 Minimum value = 0 Maximum value = 1440
tunnelmode	<String>	Read-write	To set the tunnel mode. Default value: NONE Possible values = NONE, GRE, UDP
clearnodegroupconfig	<String>	Read-write	Option to remove nodegroup config. Default value: YES Possible values = YES, NO
force	<Boolean>	Read-write	Node will be removed from cluster

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			without prompting for user confirmation.
clusterhealth	<String>	Read-only	Node clusterd state. Possible values = UP, Configurations of the node are lagging behind the cluster by more than 256 commands, The config sync operation has exceeded the time limit of 60 seconds, The config sync operation (full sync) is in progress, The node is not in sync with the cluster configurations as sync is disabled on this node, The execution of a configuration command has failed on this node, UNKNOWN
effectivestate	<String>	Read-only	Node effective health state. Possible values = UP, NOT UP, UNKNOWN, INIT
operationalsyncstate	<String>	Read-only	Node Operational Reconciliation state.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: ENABLED Possible values = ENABLED, SUCCESS, IN PROGRESS, PARTIAL SUCCESS, FAILED, INCREMENTAL SYNC DISABLED, DISABLED, UNKNOWN
syncfailurereason	<String>	Read-only	Displays the additional information along with cluster sync status. Possible values = Refer the files clus_sync_batch_status.log, sync_route_status.log and sync_clusdiff_status.log in /var/nssynclog directory for list of commands failed
masterstate	<String>	Read-only	Node Master state. Possible values = INACTIVE, ACTIVE, UNKNOWN

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
health	<String>	Read-only	Node Health state. Possible values = UNKNOWN, INIT, DOWN, UP, Some enabled and HAMON interfaces of the node are down, All interfaces of the node are down or disabled, SSL card(s) of the node have failed, Route Monitor(s) of the node have failed, Service state is being synchronized with the cluster, The backplane interface is either not set or it is down or is disabled, The CLAG member(s) of the node are down, Persistence sessions are being synchronized with the cluster, The Syn Cookie is being synchronized with the cluster, Unknown Health, AAA keys are being sychronized with the cluster, Cluster health is not up due

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			to config sync is in progress
syncstate	<String>	Read-only	Enable/Disable the synchronization of cluster configurations on the node. Default value: ENABLED Possible values = ENABLED, DISABLED
isconfigurationcoordinator	<Boolean>	Read-only	This argument is used to determine whether the node is configuration coordinator (CCO).
islocalnode	<Boolean>	Read-only	This argument is used to determine whether it is local node.
nodersskeymismatch	<Boolean>	Read-only	This argument is used to determine if there is a RSS key mismatch at cluster node level.
nodelicensemismatch	<Boolean>	Read-only	This argument is used to determine if there is a License mismatch at cluster node level.
nodejumbonotsupported	<Boolean>	Read-only	This argument is used to determine if Jumbo framework

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			not supported at cluster node level.
nodelist	<Integer[]>	Read-only	Nodelist for displaying Heartbeat not seen interfaces on a cluster node.
ifaceslist	<String[]>	Read-only	Interface list corresponding to nodelist for Heartbeat not seen interfaces on a cluster node.
enabledifaces	<String>	Read-only	Enabled Interfaces on a cluster node.
disabledifaces	<String>	Read-only	Disabled Interfaces on a cluster node.
partialfailifaces	<String>	Read-only	Partial Failure Interfaces on a cluster node.
hamonifaces	<String>	Read-only	Hamon Interfaces on a cluster node.
name	<String>	Read-only	Name of the state specific nodegroup. Minimum length = 1
cfgflags	<Integer>	Read-only	Flag indicates whether the node is bound to cluster nodegroup.
routemonitor	<String>	Read-only	The IP address (IPv4 or IPv6).
netmask	<String>	Read-only	The netmask.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

clusternode_binding

Binding object which returns the resources bound to clusternode.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
nodeid	<Integer>	Read-write	ID of the cluster node for which to display information. If an ID is not provided, information about all nodes is shown. Default value: 255 Minimum value = 0 Maximum value = 31
clusternode_routemonitor_binding	<clusternode_routemonitor_binding[]>	Read-only	routemonitor that can be bound to clusternode.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.
- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternode_binding/ nodeid_value<Integer>
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "clusternode_binding": [ {

"nodeid":<Integer_value>,

"clusternode_routemonitor_binding":<clusternode_routemonitor_binding[]_val
ue>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternode_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/clusternode_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "clusternode_binding": [ {

"nodeid":<Integer_value>,

"clusternode_routemonitor_binding":<clusternode_routemonitor_binding[]_value>

}]}
```

clusternode_routemonitor_binding

Binding object showing the routemonitor that can be bound to clusternode.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
netmask	<String>	Read-write	The netmask.
nodeid	<Integer>	Read-write	A number that uniquely identifies the cluster node. . Minimum value = 0 Maximum value = 31
routemonitor	<String>	Read-write	The IP address (IPv4 or IPv6).
routemonstate	<Integer>	Read-only	Current routemonstate.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- GET
- GET (ALL)
- COUNT
- ADD
- DELETE

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/clusternode_routemonitor_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"clusternode_routemonitor_binding":{

<b>"nodeid":<Integer_value>,

</b><b>"routemonitor":<String_value>,

</b>"netmask":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternode_routemonitor_binding/ nodeid_value<Integer> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ clusternode_routemonitor_binding/ nodeid_value<Integer> ? **args= routemonitor:<String_value>, netmask: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternode_routemonitor_binding/ nodeid_value<Integer> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ clusternode_routemonitor_binding/ nodeid_value<Integer> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of clusternode_routemonitor_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/clusternode_routemonitor_binding/ nodeid_value<Integer> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the clusternode_routemonitor_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "clusternode_routemonitor_binding": [ {

"netmask":<String_value>,

"nodeid":<Integer_value>,

"routemonitor":<String_value>,

"routemonstate":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternode_routemonitor_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/clusternode_routemonitor_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "clusternode_routemonitor_binding": [ {

"netmask":<String_value>,

"nodeid":<Integer_value>,

"routemonitor":<String_value>,

"routemonstate":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternode_routemonitor_binding/ nodeid_value<Integer> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"clusternode_routemonitor_binding": [ { "__count": "#no"} ] }
```

clusternodegroup

Configuration for Node group object type resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the nodegroup. The name uniquely identifies the nodegroup on the cluster. Minimum length = 1
strict	<String>	Read-write	Specifies whether cluster nodes, that are not part of the nodegroup, will be used as backup for the nodegroup. * Enabled - When one of the nodes goes down, no other cluster node is picked up to replace it. When the node comes up, it will continue being part of the nodegroup. * Disabled - When one of the nodes goes down, a non-nodegroup cluster

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			node is picked up and acts as part of the nodegroup. When the original node of the nodegroup comes up, the backup node will be replaced. Default value: NO Possible values = YES, NO
sticky	<String>	Read-write	Only one node can be bound to nodegroup with this option enabled. It specifies whether to prempt the traffic for the entities bound to nodegroup when owner node goes down and rejoins the cluster. * Enabled - When owner node goes down, backup node will become the owner node and takes the traffic for the entities bound to the nodegroup. When bound node rejoins the cluster, traffic for the entities bound to nodegroup

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			will not be steered back to this bound node. Current owner will have the ownership till it goes down. * Disabled - When one of the nodes goes down, a non-nodegroup cluster node is picked up and acts as part of the nodegroup. When the original node of the nodegroup comes up, the backup node will be replaced. Default value: NO Possible values = YES, NO
state	<String>	Read-write	State of the nodegroup. All the nodes binding to this nodegroup must have the same state. ACTIVE/SPARE/ PASSIVE. Possible values = ACTIVE, SPARE, PASSIVE

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Priority of Nodegroup. This priority is used for all the nodes bound to the nodegroup for Nodegroup selection. Minimum value = 0 Maximum value = 31
currentnodemask	<Integer>	Read-only	Bitmap of current nodes in this nodegroup.
backupnodemask	<Integer>	Read-only	Bitmap of backup nodes in this nodegroup.
boundedentitiescntfrompe	<Integer>	Read-only	Count of bounded entities to this nodegroup accoding to PE.
activelist	<Integer[]>	Read-only	Active node list of this nodegroup.
backuplist	<Integer[]>	Read-only	Backup node list of this nodegroup.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

clusternodegroup_clusternode_binding

Binding object showing the clusternode that can be bound to clusternodegroup.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the nodegroup. The name uniquely identifies the nodegroup on the cluster. Minimum length = 1
node	<Integer>	Read-write	Nodes in the nodegroup. Minimum value = 0 Maximum value = 31
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

- GET
- GET (ALL)
- COUNT
- ADD
- DELETE

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/clusternodegroup_clusternode_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"clusternodegroup_clusternode_binding":{

<b>"name":<String_value>,

</b>"node":<Integer_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_clusternode_binding **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_clusternode_binding? **args= name:<String_value>, node: <Integer_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_clusternode_binding **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_clusternode_binding? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of clusternodegroup_clusternode_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_clusternode_binding? **pagesize=#no;pageno=#no**

Use this query-parameter to get the clusternodegroup_clusternode_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "clusternodegroup_clusternode_binding": [ {

"name":<String_value>,

"node":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_clusternode_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_clusternode_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "clusternodegroup_clusternode_binding": [ {

"name":<String_value>,

"node":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_clusternode_binding?**args=;count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "clusternodegroup_clusternode_binding": [ { "__count": "#no"} ] }
```

clusternodegroup_crvserver_binding

vserver	<String>	Read-write	vserver that need to be bound to this nodegroup.
name	<String>	Read-write	Name of the nodegroup. The name uniquely identifies the nodegroup on the cluster. Minimum length = 1
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

- GET
- GET (ALL)
- COUNT
- ADD
- DELETE

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/clusternodegroup_lbvserver_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"clusternodegroup_lbvserver_binding":{

<b>"name":<String_value>,

</b>"vserver":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_lbvserver_binding **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_lbvserver_binding? **args= name:<String_value>, vserver: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_lbvserver_binding **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_lbvserver_binding? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of clusternodegroup_lbvserver_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_lbvserver_binding? **pagesize=#no;pageno=#no**

Use this query-parameter to get the clusternodegroup_lbvserver_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "clusternodegroup_lbvserver_binding": [ {

"vserver":<String_value>,

"name":<String_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_lbvserver_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/clusternodegroup_lbvserver_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "clusternodegroup_lbvserver_binding": [ {

"vserver":<String_value>,

"name":<String_value>

}]}
```

COUNT

- CLEAR

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

CLEAR

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusterpropstatus? **action=clear HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"clusterpropstatus":{

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusterpropstatus **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/clusterpropstatus? **args=nodeid: <Integer_value>**

Use this query-parameter to get clusterpropstatus resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/config/clusterpropstatus? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/clusterpropstatus? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of clusterpropstatus resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/clusterpropstatus? **view=summary**

Use this query-parameter to get the summary output of clusterpropstatus resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/clusterpropstatus? **pagesize=#no;pageno=#no**

Use this query-parameter to get the clusterpropstatus resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "clusterpropstatus": [ {

nodeid:<Integer_value>"numpropcmdfailed":<Integer_value>,

"cmdstrs":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/clusterpropstatus? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "clusterpropstatus": [ { "__count": "#no"} ] }
```

```

cmp

Compression

Compression configuration. The system's feature for compressing HTTP responses to compression-aware browsers.

NAME	DESCRIPTION
cmpaction	Configuration for compression action
cmpglobal_binding	Binding object showing the resources that can be bound to cmpglobal
cmpglobal_cmppolicy_binding	Binding object showing the cmppolicy that can be bound to cmpglobal
cmpparameter	Configuration for CMP parameter
cmppolicy	Configuration for compression policy
cmppolicy_binding	Binding object showing the resources that can be bound to cmppolicy
cmppolicy_cmpglobal_binding	Binding object showing the cmpglobal that can be bound to cmppolicy

NAME	DESCRIPTION
cmppolicy_cmppolicylabel_binding	Binding object showing the cmppolicylabel that can be bound to cmppolicy
cmppolicy_crvserver_binding	Binding object showing the crvserver that can be bound to cmppolicy
cmppolicy_csvserver_binding	Binding object showing the csvserver that can be bound to cmppolicy
cmppolicy_lbvserver_binding	Binding object showing the lbvserver that can be bound to cmppolicy
cmppolicylabel	Configuration for compression policy label
cmppolicylabel_binding	Binding object showing the resources that can be bound to cmppolicylabel
cmppolicylabel_cmppolicy_binding	Binding object showing the cmppolicy that can be bound to cmppolicylabel
cmppolicylabel_policybinding_binding	Binding object showing the policybinding that can be bound to cmppolicylabel

cmpaction

Configuration for compression action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the compression action. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Can be changed after the action is added. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my cmp action" or 'my cmp action'). Minimum length = 1
cmptype	<String>	Read-write	Type of compression performed by this action. Available settings function as follows:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* COMPRESS - Apply GZIP or DEFLATE compression to the response, depending on the request header. Prefer GZIP. * GZIP - Apply GZIP compression. * DEFLATE - Apply DEFLATE compression. * NOCOMPRESS - Do not compress the response if the request matches a policy that uses this action. Possible values = compress, gzip, deflate, nocompress
addvaryheader	<String>	Read-write	Control insertion of the Vary header in HTTP responses compressed by Citrix ADC. Intermediate caches store different versions of the response for different values of the headers present in the Vary response header.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: GLOBAL Possible values = GLOBAL, DISABLED, ENABLED
varyheadervalue	<String>	Read-write	The value of the HTTP Vary header for compressed responses. Minimum length = 1
deltatype	<String>	Read-write	The type of delta action (if delta type compression action is defined). Default value: PERURL Possible values = PERURL, PERPOLICY
newname	<String>	Read-write	New name for the compression action. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Choose a name that can be correlated with the function that the action performs. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my cmp action" or 'my cmp action'). Minimum length = 1
builtin	<String[]>	Read-only	Flag to determine whether compression is default or not. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
isdefault	<Boolean>	Read-only	A value of true is returned if it is a default policy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cmpaction": [ { "__count": "#no"} ] }
```

cmpglobal_binding

Binding object which returns the resources bound to cmpglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cmpglobal_cmppolicy_binding	<cmpglobal_cmppolicy_binding[]>	Read-write	cmppolicy that can be bound to cmpglobal.

Operations

(click to see Properties)

- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cmpglobal_binding

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response:

HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cmpglobal_binding": [ {

"cmpglobal_cmppolicy_binding":<cmpglobal_cmppolicy_binding[]_value>
```

```
}]}
```

cmpglobal_cmppolicy_binding

Binding object showing the cmppolicy that can be bound to cmpglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Expression or other value specifying the priority of the next policy, within the policy label, to evaluate if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher numbered priority. * END - Stop evaluation. * USE_INVOCATION_RESULT - Applicable if this policy invokes another policy label. If the final goto in the invoked policy label has a value of END, the evaluation stops. If the final goto is anything other than END, the current policy label performs a NEXT. * An

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			expression that evaluates to a number. If you specify an expression, it's evaluation result determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, that policy is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher priority number is evaluated next. * If the expression evaluates to a priority number that is numerically higher than the highest priority number, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
invoke	<Boolean>	Read-write	Invoke policies bound to a virtual server or a policy label. After the invoked policies are evaluated, the flow returns to the policy with the next priority.
globalbindtype	<String>	Read-write	. Default value: SYSTEM_GLOBAL Possible values = SYSTEM_GLOBAL, VPN_GLOBAL, RNAT_GLOBAL, APPFW_GLOBAL, TM_GLOBAL

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	The name of the globally bound HTTP compression policy.
type	<String>	Read-write	Bind point to which the policy is bound. Possible values = REQ_OVERRIDE, REQ_DEFAULT, RES_OVERRIDE, RES_DEFAULT, HTTPQUIC_REQ_OVERRIDE, HTTPQUIC_REQ_DEFAULT, HTTPQUIC_RES_OVERRIDE, HTTPQUIC_RES_DEFAULT
labelname	<String>	Read-write	Name of the label to invoke if the current policy rule evaluates to TRUE.
labeltype	<String>	Read-write	Type of policy label invocation. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-write	Positive integer specifying the priority of the policy. The lower the number, the higher the priority. By default, polices within a label

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			are evaluated in the order of their priority numbers. In the configuration utility, you can click the Priority field and edit the priority level or drag the entry to a new position in the list. If you drag the entry to a new position, the priority level is updated automatically.
numpol	<Integer>	Read-only	The number of policies bound to the bindpoint.
__count	<Double>	Read-only	count parameter

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cmpglobal_cmppolicy_binding": [ { "__count": "#no"} ] }
```

cmpparameter

Configuration for CMP parameter resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cmplevel	<String>	Read-write	Specify a compression level. Available settings function as follows:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* Optimal - Corresponds to a gzip GZIP level of 5-7. * Best speed - Corresponds to a gzip level of 1. * Best compression - Corresponds to a gzip level of 9. Default value: optimal Possible values = optimal, bestspeed, bestcompression
quantumsize	<Integer>	Read-write	Minimum quantum of data to be filled before compression begins. Default value: 57344 Minimum value = 8 Maximum value = 63488
servercmp	<String>	Read-write	Allow the server to send compressed data to the Citrix ADC. With the default setting, the Citrix ADC appliance handles all compression.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: ON Possible values = ON, OFF
heurexpiry	<String>	Read-write	Heuristic basefile expiry. Default value: OFF Possible values = ON, OFF
heurexpirythres	<Integer>	Read-write	Threshold compression ratio for heuristic basefile expiry, multiplied by 100. For example, to set the threshold ratio to 1.25, specify 125. Default value: 100 Minimum value = 1 Maximum value = 1000
heurexpiryhistwt	<Integer>	Read-write	For heuristic basefile expiry, weightage to be given to historical delta compression ratio, specified as percentage. For example, to give 25% weightage to historical ratio (and therefore 75% weightage to the ratio for current delta compression

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			transaction), specify 25. Default value: 50 Minimum value = 1 Maximum value = 100
minressize	<Integer>	Read-write	Smallest response size, in bytes, to be compressed.
cmpbypasspct	<Integer>	Read-write	Citrix ADC CPU threshold after which compression is not performed. Range: 0 - 100. Default value: 100 Minimum value = 0 Maximum value = 100
cmponpush	<String>	Read-write	Citrix ADC does not wait for the quantum to be filled before starting to compress data. Upon receipt of a packet with a PUSH flag, the appliance immediately begins compression of the accumulated packets. Default value: DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ENABLED, DISABLED
policytype	<String>	Read-write	Type of the policy. The only possible value is ADVANCED. Default value: ADVANCED Possible values = ADVANCED
addvaryheader	<String>	Read-write	Control insertion of the Vary header in HTTP responses compressed by Citrix ADC. Intermediate caches store different versions of the response for different values of the headers present in the Vary response header. Default value: DISABLED Possible values = ENABLED, DISABLED
varyheadervalue	<String>	Read-write	The value of the HTTP Vary header for compressed responses. If this argument is not specified, a default value of "Accept-

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Encoding" will be used. Minimum length = 1
externalcache	<String>	Read-write	Enable insertion of Cache-Control: private response directive to indicate response message is intended for a single user and must not be cached by a shared or proxy cache. Default value: NO Possible values = YES, NO
randomgzipfilename	<String>	Read-write	Control the addition of a random filename of random length in the GZIP header to apply the Heal-the-BREACH mitigation for the BREACH attack. Default value: DISABLED Possible values = ENABLED, DISABLED
randomgzipfilename minlength	<Integer>	Read-write	Minimum length of the random filename to be added in the GZIP header to apply the Heal-the-BREACH mitigation

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			for the BREACH attack. Default value: 8 Minimum value = 8 Maximum value = 63
randomgzipfilenamemaxlength	<Integer>	Read-write	Maximum length of the random filename to be added in the GZIP header to apply the Heal-the-BREACH mitigation for the BREACH attack. Default value: 63 Minimum value = 8 Maximum value = 63
builtin	<String[]>	Read-only	Flag to determine whether compression is default or not. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.

Operations

(click to see Properties)

- UPDATE
- UNSET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/cmpparameter **HTTP Method:** PUT

cmppolicy

Configuration for compression policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the HTTP compression policy. Must begin with an ASCII alphabetic or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Can be changed after the policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my cmp policy" or 'my cmp policy'). Minimum length = 1
rule	<String>	Read-write	Expression that determines which HTTP requests or responses match the compression policy. The following requirements apply

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			only to the Citrix ADC CLI: * If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation marks, escape the quotations by using the \ character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks.
resaction	<String>	Read-write	The built-in or user-defined compression action to apply to the response when the policy matches a request or response. Minimum length = 1
newname	<String>	Read-write	New name for the compression policy. Must begin with an ASCII alphabetic or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Choose a name that reflects the function that the policy performs. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my cmp policy" or 'my cmp policy'). Minimum length = 1
reqaction	<String>	Read-only	The compression action to be performed on requests.
hits	<Integer>	Read-only	Number of hits.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
txbytes	<Integer>	Read-only	Number of bytes transferred.
rxbytes	<Integer>	Read-only	Number of bytes received.
clientttlb	<Integer>	Read-only	Total client TTLB value.
clienttransactions	<Integer>	Read-only	Number of client transactions.
serverttlb	<Integer>	Read-only	Total server TTLB value.
servertransactions	<Integer>	Read-only	Number of server transactions.
description	<String>	Read-only	Description of the policy.
builtin	<String[]>	Read-only	Flag to determine if compression policy is builtin or not. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
isdefault	<Boolean>	Read-only	A value of true is returned if it is a default policy.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

```

cmppolicy_binding

Binding object which returns the resources bound to cmppolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the HTTP compression policy for which to display details. Minimum length = 1
cmppolicy_crvserver_binding	<cmppolicy_crvserver_binding[]>	Read-only	crvserver that can be bound to cmppolicy.
cmppolicy_lbvserver_binding	<cmppolicy_lbvserver_binding[]>	Read-only	lbvserver that can be bound to cmppolicy.
cmppolicy_cmppolicylabel_binding	<cmppolicy_cmppolicylabel_binding[]>	Read-only	cmppolicylabel that can be bound to cmppolicy.
cmppolicy_cmpglobal_binding	<cmppolicy_cmpglobal_binding[]>	Read-only	cmpglobal that can be bound to cmppolicy.
cmppolicy_csvserver_binding	<cmppolicy_csvserver_binding[]>	Read-only	csvserver that can be bound to cmppolicy.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cmppolicy_binding/ name_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cmppolicy_binding": [ {

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cmppolicy_cmppolicylabel_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ cmppolicy_cmppolicylabel_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of cmppolicy_cmppolicylabel_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/cmppolicy_cmppolicylabel_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the cmppolicy_cmppolicylabel_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```

cmppolicylabel

Configuration for compression policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name of the HTTP compression policy label. Must begin with a letter, number,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			or the underscore character (_). Additional characters allowed, after the first character, are the hyphen (-), period (.) pound sign (#), space ( ), at sign (@), equals (=), and colon (:). The name must be unique within the list of policy labels for compression policies. Can be renamed after the policy label is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my cmp policylabel" or 'my cmp policylabel'). Minimum length = 1
type	<String>	Read-write	Type of packets (request packets or response) against which to match the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			policies bound to this policy label. Possible values = REQ, RES, HTTPQUIC_REQ, HTTPQUIC_RES
newname	<String>	Read-write	New name for the compression policy label. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my cmp policylabel" or 'my cmp policylabel'). Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
numpol	<Integer>	Read-only	Number of polices bound to label.
hits	<Integer>	Read-only	Number of times policy label was invoked.
priority	<Integer>	Read-only	Specifies the priority of the policy.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
labeltype	<String>	Read-only	Type of policy label invocation. Possible values = reqvserver, resvserver, policylabel
invoke_labelname	<String>	Read-only	Name of the label to invoke if the current policy evaluates to TRUE.
flowtype	<Integer>	Read-only	Flowtype of the bound compression policy.
description	<String>	Read-only	Description of the policylabel.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/cmppolicylabel? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cmppolicylabel": [ { "__count": "#no"} ] }
```

cmppolicylabel_binding

Binding object which returns the resources bound to cmppolicylabel.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name of the HTTP compression policy label for which to display details. Minimum length = 1
cmppolicylabel_policybinding_binding	<cmppolicylabel_policybinding_binding[]>	Read-only	policybinding that can be bound to cmppolicylabel.
cmppolicylabel_cmppolicy_binding	<cmppolicylabel_cmppolicy_binding[]>	Read-only	cmppolicy that can be bound to cmppolicylabel.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.
- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cmppolicylabel_binding/ labelname_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cmppolicylabel_binding": [ {

"labelname":<String_value>,

"cmppolicylabel_cmppolicy_binding":<cmppolicylabel_cmppolicy_binding[]_val
ue>,

"cmppolicylabel_policybinding_binding":<cmppolicylabel_policybinding_bindi
```

```
ng[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cmppolicylabel_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/cmppolicylabel_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cmppolicylabel_binding": [ {

"labelname":<String_value>,

"cmppolicylabel_cmppolicy_binding":<cmppolicylabel_cmppolicy_binding[]_val
ue>,

"cmppolicylabel_policybinding_binding":<cmppolicylabel_policybinding_bindi
ng[]_value>

}]}
```

cmppolicylabel_cmppolicy_binding

Binding object showing the cmppolicy that can be bound to cmppolicylabel.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Specifies the priority of the policy.
labeltype	<String>	Read-write	Type of policy label invocation. Possible values = reqvserver, resvserver, policylabel
labelname	<String>	Read-write	Name of the HTTP compression policy label to which to bind the policy. Minimum length = 1
invoke_labelname	<String>	Read-write	Name of the label to invoke if the current policy evaluates to TRUE.
policyname	<String>	Read-write	The compression policy name.
invoke	<Boolean>	Read-write	Invoke policies bound to a virtual server or a user-defined policy label. After the invoked policies are evaluated, the flow

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			returns to the policy with the next higher priority number in the original label.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
__count	<Double>	Read-write	count parameter

NAME	DESCRIPTION
contentinspectionprofile	Configuration for ContentInspection profile
contentinspectionwasmprofile	Configuration for WASM profile

contentinspectionaction

Configuration for Content Inspection action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the remote service action. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters.
type	<String>	Read-write	Type of operation this action is going to perform. following actions are available to configure: * ICAP - forward the incoming request or response to an

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ICAP server for modification. * INLINEINSPECTION - forward the incoming or outgoing packets to IPS server for Intrusion Prevention. * MIRROR - Forwards cloned packets for Intrusion Detection. * NOINSPECTION - This does not forward incoming and outgoing packets to the Inspection device. * NSTRACE - capture current and further incoming packets on this transaction. Possible values = ICAP, INLINEINSPECTION, MIRROR, NOINSPECTION, WASM

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servername	<String>	Read-write	Name of the LB vserver or service. Minimum length = 1 Maximum length = 127
serverip	<String>	Read-write	IP address of remoteService. Minimum length = 1
serverport	<Integer>	Read-write	Port of remoteService. Default value: 1344 Minimum value = 1 Maximum value = 65535
icapprofilename	<String>	Read-write	Name of the ICAP profile to be attached to the contentInspection action. Minimum length = 1 Maximum length = 127
wasmprofilename	<String>	Read-write	Name of the CI WASM profile to be attached to the contentInspection action. Minimum length = 1 Maximum length = 127

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ifserverdown	<String>	Read-write	Name of the action to perform if the Vserver representing the remote service is not UP. This is not supported for NOINSPECTION Type. The Supported actions are: * RESET - Reset the client connection by closing it. The client program, such as a browser, will handle this and may inform the user. The client may then resend the request if desired. * DROP - Drop the request without sending a response to the user. * CONTINUE - It bypasses the ContentIsnpection and Continues/ resumes the Traffic-Flow to Client/ Server. Default value: RESET

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = CONTINUE, DROP, RESET
reqtimeout	<Integer>	Read-only	Time, in seconds, within which the remote service request must complete. This is not supported for NOINSPECTION action type. If the request does not complete within this time, the specified request timeout action is executed. Zero disables the timeout. Default value: 0 Minimum value = 0 Maximum value = 86400
reqtimeoutaction	<String>	Read-only	Name of the action to perform if the Vserver representing the remote service does not respond. This is not supported for NOINSPECTION action type. There are also some built-in actions which can be used. These are: * RESET - Reset the client connection by

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			closing it. The client program, such as a browser, will handle this and may inform the user. The client may then resend the request if desired. * DROP - Drop the request without sending a response to the user. Default value: BYPASS Possible values = BYPASS, DROP, RESET
hits	<Integer>	Read-only	The number of times the action has been taken.
referencecount	<Integer>	Read-only	The number of references to the action.
undefhits	<Integer>	Read-only	The number of times the action resulted in UNDEF.
builtin	<String[]>	Read-only	Flag to determine whether contentinspection action is built-in or not.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionaction? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "contentinspectionaction": [ { "__count": "#no"} ] }
```

contentinspectioncallout

Configuration for Content Inspection callout resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the Content Inspection callout. Not case sensitive. Must begin with an ASCII letter or underscore (_) character, and must consist only of ASCII alphanumeric or underscore characters. Must not begin with 're' or 'xp' or be a word reserved for use as an expression qualifier prefix (such as HTTP) or enumeration value (such as ASCII). Must not be the name of an existing named expression, pattern set, dataset, stringmap, or callout. Minimum length = 1
type	<String>	Read-write	Type of the Content Inspection callout. It

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			must be one of the following: * ICAP - Sends ICAP request to the configured ICAP server. Possible values = ICAP
profilename	<String>	Read-write	Name of the Content Inspection profile. The type of the configured profile must match the type specified using -type argument. Minimum length = 1 Maximum length = 127
servername	<String>	Read-write	Name of the load balancing or content switching virtual server or service to which the Content Inspection request is issued. Mutually exclusive with server IP address and port parameters. The service type must be TCP or SSL_TCP. If there are vservers and services with the same name, then vserver is selected. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum length = 127
serverip	<String>	Read-write	IP address of Content Inspection server. Mutually exclusive with the server name parameter. Minimum length = 1
serverport	<Integer>	Read-write	Port of the Content Inspection server. Default value: 1344 Minimum value = 1 Maximum value = 65535
returntype	<String>	Read-write	Type of data that the target callout agent returns in response to the callout. Available settings function as follows: * TEXT - Treat the returned value as a text string. * NUM - Treat the returned value as a number. * BOOL - Treat the returned value as a Boolean value.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Note: You cannot change the return type after it is set. Possible values = BOOL, NUM, TEXT
resultexpr	<String>	Read-write	Expression that extracts the callout results from the response sent by the CI callout agent. Must be a response based expression, that is, it must begin with ICAP.RES. The operations in this expression must match the return type. For example, if you configure a return type of TEXT, the result expression must be a text based expression, as in the following example: icap.res.header("ISTag"). Minimum length = 1
comment	<String>	Read-write	Any comments to preserve information about this Content Inspection callout.
hits	<Integer>	Read-only	Total hits.
undefhits	<Integer>	Read-only	Total undefs.
undefreason	<String>	Read-only	Reason for last undef.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = Failed to add service, Vserver not found, Not a HTTP or SSL vserver, Generated callout request is invalid, Content-Length header not found in callout request, Not enough space to put Content-Length value, Config incomplete, Server is DOWN, Creating callout connection failed, No memory to generate callout request packets, No memory to create callout task, No memory to create callout async, Callout request expression undef, No callout response expression, Skipped callout response eval, Callout response pixl init undef, Callout response expression undef
_nextgenapiresource	<String>	Read-only	.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-only	count parameter

- DELETE
- UPDATE
- UNSET
- GET (ALL)
- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectioncallout **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"contentinspectioncallout":{

<b>"name":<String_value>,

</b><b>"type":<String_value>,

Response Payload:

```
{ "contentinspectioncallout": [ { "__count": "#no"} ] }
```

contentinspectionglobal_binding

Binding object which returns the resources bound to contentinspectionglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
contentinspectionglobal_contentinspectionpolicy_binding	<contentinspectionglobal_contentinspectionpolicy_binding[]>	Read-write	contentinspectionpolicy that can be bound to contentinspectionglobal.

Operations

(click to see Properties)

- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionglobal_binding

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response:

HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "contentinspectionglobal_binding": [ {

"contentinspectionglobal_contentinspectionpolicy_binding":<contentinspectionglobal_contentinspectionpolicy_binding[]_value>

}]}
```

contentinspectionglobal_contentinspectionpolicy_binding

Binding object showing the contentinspectionpolicy that can be bound to contentinspectionglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Specifies the priority of the policy.
labeltype	<String>	Read-write	Type of invocation. Available settings function as follows: * reqvserver - Forward the request to the specified request virtual server. * resvserver - Forward

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the response to the specified response virtual server. * policylabel - Invoke the specified policy label. Possible values = reqvserver, resvserver, policylabel
labelname	<String>	Read-write	* If labelType is policylabel, name of the policy label to invoke. * If labelType is reqvserver or resvserver, name of the virtual server to which to forward the request of response.
type	<String>	Read-write	The bindpoint to which to policy is bound. Possible values = REQ_OVERRIDE, REQ_DEFAULT, RES_OVERRIDE, RES_DEFAULT
invoke	<Boolean>	Read-write	Terminate evaluation of policies bound to the current policy label, and then forward the request to the specified virtual server or evaluate the specified policy label.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
globalbindtype	<String>	Read-write	. Default value: SYSTEM_GLOBAL Possible values = SYSTEM_GLOBAL, VPN_GLOBAL, RNAT_GLOBAL, APPFW_GLOBAL, TM_GLOBAL
policyname	<String>	Read-write	Name of the contentInspection policy.
numpol	<Integer>	Read-only	The number of policies bound to the bindpoint.
flowtype	<Integer>	Read-only	flowtype of the bound contentInspection policy.
__count	<Double>	Read-only	count parameter

contentinspectionpolicy

Configuration for ContentInspection policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the contentInspection policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Can be changed after the contentInspection policy is added. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my contentInspection policy" or 'my contentInspection policy').

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
rule	<String>	Read-write	Expression that the policy uses to determine whether to execute the specified action.
action	<String>	Read-write	Name of the contentInspection action to perform if the request matches this contentInspection policy. There are also some built-in actions which can be used. These are: * NOINSPECTION - Send the request from the client to the server or response from the server to the client without sending it to Inspection device for Content Inspection. * RESET - Resets the client connection by closing it. The client program, such as a browser, will handle this and may inform the user. The client may then resend

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the request if desired. * DROP - Drop the request without sending a response to the user.
undefaction	<String>	Read-write	Action to perform if the result of policy evaluation is undefined (UNDEF). An UNDEF event indicates an internal error condition. Only the above built-in actions can be used.
comment	<String>	Read-write	Any type of information about this contentInspection policy.
logaction	<String>	Read-write	Name of the messagelog action to use for requests that match this policy.
newname	<String>	Read-write	New name for the contentInspection policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:),

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			and underscore characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my contentInspection policy" or 'my contentInspection policy'). Minimum length = 1
hits	<Integer>	Read-only	Number of hits.
undefhits	<Integer>	Read-only	Number of policy UNDEF hits.
builtin	<String[]>	Read-only	Flag to determine if contentInspection policy is built-in or not. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy? **action=unset HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"contentinspectionpolicy":{

<b>"name":<String_value>,

</b>"undefaction":true,

"comment":true,

"logaction":true

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

RENAME

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy? **action=rename**
HTTP Method: POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"contentinspectionpolicy":{

<b>"name":<String_value>,

</b><b>"newname":<String_value>
```

```
</b>}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of contentinspectionpolicy resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy? **view=summary**

Use this query-parameter to get the summary output of contentinspectionpolicy resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy? **pagesize=#no;pageno=#no**

Use this query-parameter to get the contentinspectionpolicy resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "contentinspectionpolicy": [ {

```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "contentinspectionpolicy": [ { "__count": "#no"} ] }
```

contentinspectionpolicy_binding

Binding object which returns the resources bound to contentinspectionpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the contentInspection policy for which to display settings.
contentinspectionpolicy_contentinspectionpolicylabel_binding	<contentinspectionpolicy_contentinspectionpolicylabel_binding[]>	Read-only	contentinspectionpolicylabel that can be bound to contentinspectionpolicy.
contentinspectionpolicy_contentinspectionglobal_binding	<contentinspectionpolicy_contentinspectionglobal_binding[]>	Read-only	contentinspectionglobal that can be bound to contentinspectionpolicy.
contentinspectionpolicy_csvserver_binding	<contentinspectionpolicy_csvserver_binding[]>	Read-only	csvserver that can be bound to contentinspectionpolicy.
contentinspectionpolicy_lbvserver_binding	<contentinspectionpolicy_lbvserver_binding[]>	Read-only	lbvserver that can be bound to contentinspectionpolicy.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy_binding/ name_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "contentinspectionpolicy_binding": [ {

"name":<String_value>,
```

```
"contentinspectionpolicy_csvserver_binding":<contentinspectionpolicy_csvserver_binding[]_value>,

"contentinspectionpolicy_contentinspectionglobal_binding":<contentinspectionpolicy_contentinspectionglobal_binding[]_value>,

"contentinspectionpolicy_lbvserver_binding":<contentinspectionpolicy_lbvserver_binding[]_value>,

"contentinspectionpolicy_contentinspectionpolicylabel_binding":<contentinspectionpolicy_contentinspectionpolicylabel_binding[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "contentinspectionpolicy_binding": [ {

"name":<String_value>,

"contentinspectionpolicy_csvserver_binding":<contentinspectionpolicy_csvserver_binding[]_value>,

"contentinspectionpolicy_contentinspectionglobal_binding":<contentinspectionpolicy_contentinspectionglobal_binding[]_value>,

"contentinspectionpolicy_lbvserver_binding":<contentinspectionpolicy_lbvserver_binding[]_value>,

"contentinspectionpolicy_contentinspectionpolicylabel_binding":<contentinspectionpolicy_contentinspectionpolicylabel_binding[]_value>

}]}
```

contentinspectionpolicy_contentinspectionglobal_binding

Binding object showing the contentinspectionglobal that can be bound to contentinspectionpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the contentInspection policy for which to display settings.
boundto	<String>	Read-write	Location where policy is bound.
labelname	<String>	Read-only	Name of the label to invoke if the current policy rule evaluates to TRUE.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
activepolicy	<Integer>	Read-only	Indicates whether policy is bound or not.
labeltype	<String>	Read-only	Type of policy label invocation. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-only	Specifies the priority of the policy.
__count	<Double>	Read-only	count parameter

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy_lbvserver_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ contentinspectionpolicy_lbvserver_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of contentinspectionpolicy_lbvserver_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ contentinspectionpolicy_lbvserver_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the contentinspectionpolicy_lbvserver_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "contentinspectionpolicy_lbvserver_binding": [ {

"name":<String_value>,

"boundto":<String_value>,

"labeltype":<String_value>,

"priority":<Integer_value>,

"labelname":<String_value>,

"gotopriorityexpression":<String_value>,

"activepolicy":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy_lbvserver_binding
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/ contentinspectionpolicy_lbvserver_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "contentinspectionpolicy_lbvserver_binding": [ {

"name":<String_value>,

"boundto":<String_value>,

"labeltype":<String_value>,

"priority":<Integer_value>,

"labelname":<String_value>,

"gotopriorityexpression":<String_value>,

"activepolicy":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicy_lbvserver_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"contentinspectionpolicy_lbvserver_binding": [ { "__count": "#no"} ] }
```

contentinspectionpolicylabel

Configuration for ContentInspection policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name for the contentInspection policy label. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after the contentInspection policy label is added. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			single quotation marks (for example, "my contentInspection policy label" or 'my contentInspection policy label').
type	<String>	Read-write	Type of packets (request or response packets) against which to match the policies bound to this policy label. Possible values = REQ, RES
comment	<String>	Read-write	Any comments to preserve information about this contentInspection policy label.
newname	<String>	Read-write	New name for the contentInspection policy label. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:),

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			and underscore characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my policy label" or 'my policy label'). Minimum length = 1
numpol	<Integer>	Read-only	Number of polices bound to label.
hits	<Integer>	Read-only	Number of times policy label was invoked.
priority	<Integer>	Read-only	Specifies the priority of the policy.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
labeltype	<String>	Read-only	Type of invocation. Available settings function as follows:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* reqvserver - Forward the request to the specified request virtual server. * resvserver - Forward the response to the specified response virtual server. * policylabel - Invoke the specified policy label. Possible values = reqvserver, resvserver, policylabel
invoke_labelname	<String>	Read-only	* If labelType is policylabel, name of the policy label to invoke. * If labelType is reqvserver or resvserver, name of the virtual server to which to forward the request or response.
flowtype	<Integer>	Read-only	Flowtype of the bound contentInspection policy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
isdefault	<Boolean>	Read-only	A value of true is returned if it is a default cipolicylabel.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

- ADD
- DELETE
- GET (ALL)
- GET
- COUNT
- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicylabel **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"contentinspectionpolicylabel":{

<b>"labelname":<String_value>,

</b><b>"type":<String_value>,

</b>"comment":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicylabel/labelname_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

RENAME

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicylabel? **action=rename**
HTTP Method: POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"contentinspectionpolicylabel":{

<b>"labelname":<String_value>,

</b><b>"newname":<String_value>

</b>}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicylabel **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicylabel? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicylabel? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of contentinspectionpolicylabel resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicylabel? **view=summary**

Use this query-parameter to get the summary output of contentinspectionpolicylabel resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionpolicylabel? **pagesize=#no;pageno=#no**

Use this query-parameter to get the contentinspectionpolicylabel resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

"labeltype":<String_value>,

"priority":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/ contentinspectionpolicylabel_policybinding_binding/ labelname_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"contentinspectionpolicylabel_policybinding_binding": [ { "__count":
"#no"} ] }
```

contentinspectionprofile

Configuration for ContentInspection profile resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of a ContentInspection profile. Must begin with a letter, number, or the underscore \(_\) character. Other characters allowed, after the first character, are the hyphen \(-\), period \(.\), hash \(#\), space \(\), at \(@\), colon \(:\), and equal \(=\) characters. The name of a IPS profile cannot be changed after it is created.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks \ (for example, "my ips profile" or 'my ips profile'\). Minimum length = 1 Maximum length = 127
type	<String>	Read-write	Type of ContentInspection profile. Following types are available to configure: INLINEINSPECTION : To inspect the packets/requests using IPS. MIRROR : To forward cloned packets. Possible values = InlineInspection, Mirror
ingressinterface	<String>	Read-write	Ingress interface for CI profile.It is a mandatory argument while creating an ContentInspection profile of IPS type.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ingressvlan	<Integer>	Read-write	Ingress Vlan for CI.
egressinterface	<String>	Read-write	Egress interface for CI profile.It is a mandatory argument while creating an ContentInspection profile of type INLINEINSPECTION or MIRROR.
iptunnel	<String>	Read-write	IP Tunnel for CI profile. It is used while creating a ContentInspection profile of type MIRROR when the IDS device is in a different network. Minimum length = 1 Maximum length = 31
egressvlan	<Integer>	Read-write	Egress Vlan for CI.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

- GET (ALL)

- GET
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionprofile **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"contentinspectionprofile":{

<b>"name":<String_value>,

</b><b>"type":<String_value>,

</b>"ingressinterface":<String_value>,

"ingressvlan":<Integer_value>,

"egressinterface":<String_value>,

"iptunnel":<String_value>,

"egressvlan":<Integer_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionprofile/ name_value<String>
HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/contentinspectionprofile **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"contentinspectionprofile":{

<b>"name":<String_value>,

</b>"egressinterface":<String_value>,

"ingressinterface":<String_value>,

contentinspectionwasmprofile

Configuration for WASM profile resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of CI WASM profile. Minimum length = 1 Maximum length = 127

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
timeout	<Integer>	Read-write	Timeout (in milliseconds) for the connection with the CI WASM agent. Default value: 1000 Minimum value = 0 Maximum value = 86400000
timeoutaction	<String>	Read-write	Timeout action for the connection with the CI agent. Either the original request can be bypassed i.e. request/response is forwarded to the endpoint or the transaction is dropped/reset. Default value: DROP Possible values = BYPASS, DROP, RESET
maxbodylen	<Integer>	Read-write	Max data size (in KB) that will be sent to the CI Agent. Default is 16KB. Maximum value that can be configured is 32KB. Default value: 16 Minimum value = 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 32
anomalousdatasize	<Integer>	Read-write	Transaction data size (in KB) greater than which a transaction is considered as anomalous. Default is 512KB. Default value: 512 Minimum value = 0 Maximum value = 512
anomalousttfbtime	<Integer>	Read-write	Transaction time (in milliseconds) above which a transaction is considered as anomalous. Default is 1 seconds. Default value: 1000 Minimum value = 0 Maximum value = 3600000
wasmmodule	<String>	Read-write	Name of the WASM Module. Minimum length = 1 Maximum length = 127
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

cr

Cache Redirection

Cache redirection configuration. The cache redirection feature can transparently redirect cacheable HTTP requests to a cache and send non-cacheable or dynamic HTTP requests to the origin server. A cache stores or caches frequently requested web content and serves such web content to a client on behalf of the origin servers, alleviating the load on the origin server farm.

NAME	DESCRIPTION
craction	Configuration for cache redirection action
crpolicy	Configuration for cache redirection policy
crpolicy_binding	Binding object showing the resources that can be bound to crpolicy
crpolicy_crvserver_binding	Binding object showing the crvserver that can be bound to crpolicy
crvserver	Configuration for CR virtual server
crvserver_analyticsprofile_binding	Binding object showing the analyticsprofile that can be bound to crvserver
crvserver_appflowpolicy_binding	Binding object showing the appflowpolicy that can be bound to crvserver
crvserver_appfwpolicy_binding	Binding object showing the appfwpolicy that can be bound to crvserver

NAME	DESCRIPTION
crvserver_appqoepolicy_binding	Binding object showing the appqoepolicy that can be bound to crvserver
crvserver_binding	Binding object showing the resources that can be bound to crvserver
crvserver_cachepolicy_binding	Binding object showing the cachepolicy that can be bound to crvserver
crvserver_cmppolicy_binding	Binding object showing the cmppolicy that can be bound to crvserver
crvserver_crpolicy_binding	Binding object showing the crpolicy that can be bound to crvserver
crvserver_cspolicy_binding	Binding object showing the cspolicy that can be bound to crvserver
crvserver_feopolicy_binding	Binding object showing the feopolicy that can be bound to crvserver
crvserver_icapolicy_binding	Binding object showing the icapolicy that can be bound to crvserver
crvserver_lbvserver_binding	Binding object showing the lbvserver that can be bound to crvserver
crvserver_policymap_binding	Binding object showing the policymap that can be bound to crvserver

NAME	DESCRIPTION
crvserver_responderpolicy_binding	Binding object showing the responderpolicy that can be bound to crvserver
crvserver_rewritepolicy_binding	Binding object showing the rewritepolicy that can be bound to crvserver
crvserver_spilloverpolicy_binding	Binding object showing the spilloverpolicy that can be bound to crvserver

craction

Configuration for cache redirection action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the action for which to display detailed information. Minimum length = 1
crtype	<String>	Read-only	Type to decide where to redirect the requests if the cache redirection policy is hit. The valid options are as follows: *CACHE - Directs all the requests to the cache if cache redirection policy is hit.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			*ORIGIN - Directs all requests to the origin server if the cache redirection policy is hit. Possible values = origin, cache
builtin	<String[]>	Read-only	Flag to determine whether CRACTION is default or not. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
isdefault	<Boolean>	Read-only	A value of true is returned if it is a default cr action.
hits	<Integer>	Read-only	The number of times the action has been taken.
referencecount	<Integer>	Read-only	The number of references to the action.
undefhits	<Integer>	Read-only	The number of times the action resulted in UNDEF.
comment	<String>	Read-only	Comment. Any type of information about

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			this responder action.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

crpolicy

Configuration for cache redirection policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Name for the cache redirection policy. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Cannot

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			be changed after the policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my policy" or 'my policy'). Minimum length = 1
rule	<String>	Read-write	Expression, or name of a named expression, against which traffic is evaluated. The following requirements apply only to the Citrix ADC CLI: * If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			marks, escape the quotations by using the \ character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks.
action	<String>	Read-write	Name of the built-in cache redirection action: CACHE/ ORIGIN.
logaction	<String>	Read-write	The log action associated with the cache redirection policy.
newname	<String>	Read-write	The new name of the content switching policy. Minimum length = 1
boundto	<String>	Read-only	Domain name.
vstype	<Integer>	Read-only	Virtual server type.
hits	<Integer>	Read-only	Total number of hits.
priority	<Integer>	Read-only	priority of bound policy.
activepolicy	<Boolean>	Read-only	Indicates whether policy is bound or not.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-only	Name of the label invoked.
labeltype	<String>	Read-only	The invocation type. Possible values = reqvserver, resvserver, policylabel
builtin	<String[]>	Read-only	. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
isdefault	<Boolean>	Read-only	A value of true is returned if it is a default cr policy.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET
- GET (ALL)
- GET

- COUNT
- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/crpolicy **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"crpolicy":{

<b>"policyname":<String_value>,

</b><b>"rule":<String_value>,

</b>"action":<String_value>,

"logaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/crpolicy/ policyname_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UPDATE

URL: http:// <netscaler-ip-address> /nitro/v1/config/crpolicy **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"crpolicy":{

<b>"policyname":<String_value>,

</b>"rule":<String_value>,

"action":<String_value>,

"logaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

UNSET

URL: http:// <netscaler-ip-address> /nitro/v1/config/crpolicy? **action=unset HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"crpolicy":{

<b>"policyname":<String_value>,

</b>"logaction":true

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

RENAME

URL: http:// <netscaler-ip-address> /nitro/v1/config/crpolicy? **action=rename HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"crpolicy":{

<b>"policyname":<String_value>,

</b><b>"newname":<String_value>

</b>}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/crpolicy **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/crpolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/crpolicy? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of crpolicy resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/crpolicy? **view=summary**

Use this query-parameter to get the summary output of crpolicy resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/crpolicy? **pagesize=#no;pageno=#no**

Use this query-parameter to get the crpolicy resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "crpolicy": [ {

"policyname":<String_value>,

"rule":<String_value>,

"boundto":<String_value>,

"action":<String_value>,

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/crpolicy? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "crpolicy": [ { "__count": "#no"} ] }
```

crpolicy_binding

Binding object which returns the resources bound to crpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Name of the cache redirection policy to display. If this parameter is omitted, details of all the policies are displayed. Minimum length = 1
crpolicy_crvserver_binding	<crpolicy_crvserver_binding[]>	Read-only	crvserver that can be bound to crpolicy.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/crpolicy_binding/ policyname_value<String>
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "crpolicy_binding": [ {

"policyname":<String_value>,

"crpolicy_crvserver_binding":<crpolicy_crvserver_binding[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/crpolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/crpolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "crpolicy_binding": [ {

"policyname":<String_value>,

"crpolicy_crvserver_binding":<crpolicy_crvserver_binding[]_value>

}]}
```

crpolicy_crvserver_binding

Binding object showing the crvserver that can be bound to crpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	Domain name.
policyname	<String>	Read-write	Name of the cache redirection policy to display. If this parameter is omitted, details of all the policies are displayed. Minimum length = 1
labelname	<String>	Read-only	Name of the label invoked.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
bindhits	<Integer>	Read-only	Total number of hits.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
hits	<Integer>	Read-only	Total number of hits.
priority	<Integer>	Read-only	priority of bound policy.
labeltype	<String>	Read-only	The invocation type. Possible values = reqvserver, resvserver, policylabel
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/crpolicy_crvserver_binding/ policyname_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ crpolicy_crvserver_binding/ policyname_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of crpolicy_crvserver_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/crpolicy_crvserver_binding/ policyname_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the crpolicy_crvserver_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

crvserver

Configuration for CR virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the cache redirection virtual server. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Can be changed after the cache redirection virtual server is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			marks (for example, "my server" or 'my server'). Minimum length = 1
td	<Integer>	Read-write	Integer value that uniquely identifies the traffic domain in which you want to configure the entity. If you do not specify an ID, the entity becomes part of the default traffic domain, which has an ID of 0. Minimum value = 0 Maximum value = 4094
servicetype	<String>	Read-write	Protocol (type of service) handled by the virtual server. Possible values = HTTP, SSL, NNTP, HDX
ipv46	<String>	Read-write	IPv4 or IPv6 address of the cache redirection virtual server. Usually a public IP address. Clients send connection requests to this IP address. Note: For a transparent cache redirection virtual

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			server, use an asterisk (*) to specify a wildcard virtual server address.
port	<Integer>	Read-write	Port number of the virtual server. Default value: 80 Minimum value = 1 Maximum value = 65534
ipset	<String>	Read-write	The list of IPv4/IPv6 addresses bound to ipset would form a part of listening service on the current cr vserver. Minimum length = 1
range	<Integer>	Read-write	Number of consecutive IP addresses, starting with the address specified by the IPAddress parameter, to include in a range of addresses assigned to this virtual server. Default value: 1 Minimum value = 1 Maximum value = 254

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachetype	<String>	Read-write	Mode of operation for the cache redirection virtual server. Available settings function as follows: * TRANSPARENT - Intercept all traffic flowing to the appliance and apply cache redirection policies to determine whether content should be served from the cache or from the origin server. * FORWARD - Resolve the hostname of the incoming request, by using a DNS server, and forward requests for non-cacheable content to the resolved origin servers. Cacheable requests are sent to the configured cache servers. * REVERSE - Configure reverse proxy caches for specific origin

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			servers. Incoming traffic directed to the reverse proxy can either be served from a cache server or be sent to the origin server with or without modification to the URL. The default value for cache type is TRANSPARENT if service is HTTP or SSL whereas the default cache type is FORWARD if the service is HDX. Possible values = TRANSPARENT, REVERSE, FORWARD
redirect	<String>	Read-write	Type of cache server to which to redirect HTTP requests. Available settings function as follows: * CACHE - Direct all requests to the cache. * POLICY - Apply the cache redirection policy to determine whether

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the request should be directed to the cache or to the origin. * ORIGIN - Direct all requests to the origin server. Default value: POLICY Possible values = CACHE, POLICY, ORIGIN
onpolicymatch	<String>	Read-write	Redirect requests that match the policy to either the cache or the origin server, as specified. Note: For this option to work, you must set the cache redirection type to POLICY. Default value: ORIGIN Possible values = CACHE, ORIGIN
redirecturl	<String>	Read-write	URL of the server to which to redirect traffic if the cache redirection virtual server configured on the Citrix ADC

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			becomes unavailable. Minimum length = 1 Maximum length = 128
clttimeout	<Integer>	Read-write	Time-out value, in seconds, after which to terminate an idle client connection. Minimum value = 0 Maximum value = 31536000
precedence	<String>	Read-write	Type of policy (URL or RULE) that takes precedence on the cache redirection virtual server. Applies only to cache redirection virtual servers that have both URL and RULE based policies. If you specify URL, URL based policies are applied first, in the following order: 1. Domain and exact URL 2. Domain, prefix and suffix 3. Domain and suffix

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			4. Domain and prefix 5. Domain only 6. Exact URL 7. Prefix and suffix 8. Suffix only 9. Prefix only 10. Default If you specify RULE, the rule based policies are applied before URL based policies are applied. Default value: RULE Possible values = RULE, URL
arp	<String>	Read-write	Use ARP to determine the destination MAC address. Possible values = ON, OFF
ghost	<String>	Read-write	. Possible values = ON, OFF
map	<String>	Read-write	Obsolete.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ON, OFF
format	<String>	Read-write	. Possible values = ON, OFF
via	<String>	Read-write	Insert a via header in each HTTP request. In the case of a cache miss, the request is redirected from the cache server to the origin server. This header indicates whether the request is being sent from a cache server. Default value: ON Possible values = ON, OFF
cachevserver	<String>	Read-write	Name of the default cache virtual server to which to redirect requests (the default target of the cache redirection virtual server). Minimum length = 1
dnsvservername	<String>	Read-write	Name of the DNS virtual server that resolves domain names arriving at the forward proxy virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Note: This parameter applies only to forward proxy virtual servers, not reverse or transparent. Minimum length = 1
destinationvserver	<String>	Read-write	Destination virtual server for a transparent or forward proxy cache redirection virtual server. Minimum length = 1
domain	<String>	Read-write	Default domain for reverse proxies. Domains are configured to direct an incoming request from a specified source domain to a specified target domain. There can be several configured pairs of source and target domains. You can select one pair to be the default. If the host header or URL of an incoming request does not include a source domain, this option sends the request to the specified target domain.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1
sopersistencetimeout	<Integer>	Read-write	Time-out, in minutes, for spillover persistence. Minimum value = 2 Maximum value = 24
sothreshold	<Integer>	Read-write	For CONNECTION (or) DYNAMICCONNECTION spillover, the number of connections above which the virtual server enters spillover mode. For BANDWIDTH spillover, the amount of incoming and outgoing traffic (in Kbps) before spillover. For HEALTH spillover, the percentage of active services (by weight) below which spillover occurs. Minimum value = 1
reuse	<String>	Read-write	Reuse TCP connections to the origin server across client connections. Do not set this parameter unless the Service Type parameter is set to HTTP. If you set this

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			parameter to OFF, the possible settings of the Redirect parameter function as follows: * CACHE - TCP connections to the cache servers are not reused. * ORIGIN - TCP connections to the origin servers are not reused. * POLICY - TCP connections to the origin servers are not reused. If you set the Reuse parameter to ON, connections to origin servers and connections to cache servers are reused. Default value: ON Possible values = ON, OFF
state	<String>	Read-write	Initial state of the cache redirection virtual server. Default value: ENABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ENABLED, DISABLED
downstateflush	<String>	Read-write	Perform delayed cleanup of connections to this virtual server. Default value: ENABLED Possible values = ENABLED, DISABLED
backupvserver	<String>	Read-write	Name of the backup virtual server to which traffic is forwarded if the active server becomes unavailable. Minimum length = 1
disableprimaryondown	<String>	Read-write	Continue sending traffic to a backup virtual server even after the primary virtual server comes UP from the DOWN state. Default value: DISABLED Possible values = ENABLED, DISABLED
l2conn	<String>	Read-write	Use L2 parameters, such as MAC, VLAN,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			and channel to identify a connection. Possible values = ON, OFF
backendssl	<String>	Read-write	Decides whether the backend connection made by Citrix ADC to the origin server will be HTTP or SSL. Applicable only for SSL type CR Forward proxy vserver. Default value: DISABLED Possible values = ENABLED, DISABLED
listenpolicy	<String>	Read-write	String specifying the listen policy for the cache redirection virtual server. Can be either an in-line expression or the name of a named expression. Default value: "NONE"
listenpriority	<Integer>	Read-write	Priority of the listen policy specified by the Listen Policy parameter. The lower the number, higher the priority. Default value: 101

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 0 Maximum value = 100
tcpprofilename	<String>	Read-write	Name of the profile containing TCP configuration information for the cache redirection virtual server. Minimum length = 1 Maximum length = 127
httpprofilename	<String>	Read-write	Name of the profile containing HTTP configuration information for cache redirection virtual server. Minimum length = 1 Maximum length = 127
comment	<String>	Read-write	Comments associated with this virtual server. Maximum length = 256
srcipexpr	<String>	Read-write	Expression used to extract the source IP addresses from the requests originating from the cache. Can be either an in-line expression or the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			name of a named expression. Minimum length = 1 Maximum length = 1500
originusip	<String>	Read-write	Use the client's IP address as the source IP address in requests sent to the origin server. Note: You can enable this parameter to implement fully transparent CR deployment. Possible values = ON, OFF
useportrange	<String>	Read-write	Use a port number from the port range (set by using the set ns param command, or in the Create Virtual Server (Cache Redirection) dialog box) as the source port in the requests sent to the origin server. Default value: OFF Possible values = ON, OFF
appflowlog	<String>	Read-write	Enable logging of AppFlow information.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: ENABLED Possible values = ENABLED, DISABLED
netprofile	<String>	Read-write	Name of the network profile containing network configurations for the cache redirection virtual server. Minimum length = 1 Maximum length = 127
icmpvsrresponse	<String>	Read-write	Criterion for responding to PING requests sent to this virtual server. If ACTIVE, respond only if the virtual server is available. If PASSIVE, respond even if the virtual server is not available. Default value: PASSIVE Possible values = PASSIVE, ACTIVE
rhistate	<String>	Read-write	A host route is injected according to the setting on the virtual servers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* If set to PASSIVE on all the virtual servers that share the IP address, the appliance always injects the hostroute. * If set to ACTIVE on all the virtual servers that share the IP address, the appliance injects even if one virtual server is UP. * If set to ACTIVE on some virtual servers and PASSIVE on the others, the appliance, injects even if one virtual server set to ACTIVE is UP. Default value: PASSIVE Possible values = PASSIVE, ACTIVE
useoriginipportforcache	<String>	Read-write	Use origin ip/port while forwarding request to the cache. Change the destination IP, destination port of the request came to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			CR vserver to Origin IP and Origin Port and forward it to Cache. Default value: NO Possible values = YES, NO
tcpprobeport	<Integer>	Read-write	Port number for external TCP probe. NetScaler provides support for external TCP health check of the vserver status over the selected port. This option is only supported for vservers assigned with an IPAddress or ipset. Minimum value = 1 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
probeprotocol	<String>	Read-write	Citrix ADC provides support for external health check of the vserver status. Select HTTP or TCP probes for healthcheck. Possible values = TCP, HTTP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
probesuccessresponsecode	<String>	Read-write	HTTP code to return in SUCCESS case. Default value: "200 OK" Minimum length = 1 Maximum length = 64
probeport	<Integer>	Read-write	Citrix ADC provides support for external health check of the vserver status. Select port for HTTP/TCP monitring. Default value: 0 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
disallowserviceaccess	<String>	Read-write	This is effective when a FORWARD type cr vserver is added. By default, this parameter is DISABLED. When it is ENABLED, backend services cannot be accessed through a FORWARD type cr vserver. Default value: DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ENABLED, DISABLED
wasmmodule	<String>	Read-write	Name of the WASM module to assign to this virtual server.
newname	<String>	Read-write	New name for the cache redirection virtual server. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my name" or 'my name'). Minimum length = 1
ip	<String>	Read-only	.
value	<String>	Read-only	The ssl card status for the transparent ssl cr vserver. Possible values = Certkey/ Certkeybundle/Vault

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			not bound/Cert-store not usable, SSL feature disabled
ngname	<String>	Read-only	Nodegroup devno to which this crvserver belongs to.
type	<String>	Read-only	Virtual server type. Possible values = CONTENT, ADDRESS
curstate	<String>	Read-only	The state of the cr vserver. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
status	<Integer>	Read-only	Status.
authentication	<String>	Read-only	Authentication. Possible values = ON, OFF
homepage	<String>	Read-only	Home page.
rule	<String>	Read-only	Rule.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-only	Policies bound to this vserver.
pipolicyhits	<Integer>	Read-only	Number of hits.
servicename	<String>	Read-only	Service name.
weight	<Integer>	Read-only	Weight for this service.
targetvserver	<String>	Read-only	The CSW target server names.
priority	<Integer>	Read-only	The priority for the policy.
somethod	<String>	Read-only	The spillover factor. When the main virtual server reaches this spillover threshold, it will give further traffic to the backupvserver. Possible values = CONNECTION, DYNAMICCONNECTION, BANDWIDTH, HEALTH, LLMQUOTA, NONE
sopersistence	<String>	Read-only	The state of spillover persistence. Possible values = ENABLED, DISABLED
lbvserver	<String>	Read-only	The Default target server name.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1
bindpoint	<String>	Read-only	The bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST
invoke	<Boolean>	Read-only	Invoke flag.
labeltype	<String>	Read-only	The invocation type. Possible values = reqvserver, resvserver, policylabel
labelname	<String>	Read-only	Name of the label invoked.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
nodefaultbindings	<String>	Read-only	to determine if the configuration will have default ssl CIPHER and ECC curve bindings. Default value: NO Possible values = YES, NO
_nextgenapiresource	<String>	Read-only	.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET
- ENABLE
- DISABLE
- GET (ALL)
- GET
- COUNT
- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/crvserver **HTTP Method:** POST

Response Header:

Content-Type:application/json

Response Payload:

```
{ "crvserver": [ { "__count": "#no"} ] }
```

crvserver_analyticsprofile_binding

Binding object showing the analyticsprofile that can be bound to crvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the cache redirection virtual server to which to bind the cache redirection policy. Minimum length = 1
analyticsprofile	<String>	Read-write	Name of the analytics profile bound to the CR vserver.
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/crvserver_analyticsprofile_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"crvserver_analyticsprofile_binding":{

<b>"name":<String_value>,

</b>"analyticsprofile":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/crvserver_analyticsprofile_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ crvserver_analyticsprofile_binding/ name_value<String> ? **args=analyticsprofile: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/crvserver_analyticsprofile_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/

crvserver_analyticsprofile_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of crvserver_analyticsprofile_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/crvserver_analyticsprofile_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the crvserver_analyticsprofile_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "crvserver_analyticsprofile_binding": [ {

"name":<String_value>,

"analyticsprofile":<String_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/crvserver_analyticsprofile_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/crvserver_analyticsprofile_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "crvserver_analyticsprofile_binding": [ {

"name":<String_value>,

"analyticsprofile":<String_value>

}]}
```

URL: http:// <netscaler-ip-address> /nitro/v1/config/crvserver_analyticsprofile_binding/name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"crvserver_analyticsprofile_binding": [ { "__count": "#no"} ] }
```

crvserver_appflowpolicy_binding

Binding object showing the appflowpolicy that can be bound to crvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the cache redirection virtual server to which to bind the cache redirection policy. Minimum length = 1
labeltype	<String>	Read-write	The invocation type. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-write	The priority for the policy.
bindpoint	<String>	Read-write	For a rewrite policy, the bind point to which to bind the policy. Note: This parameter applies

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			only to rewrite policies, because content switching policies are evaluated only at request time. Possible values = REQUEST, RESPONSE, ICA_REQUEST
labelname	<String>	Read-write	Name of the label invoked.
targetvserver	<String>	Read-write	Name of the virtual server to which content is forwarded. Applicable only if the policy is a map policy and the cache redirection virtual server is of type REVERSE. Minimum length = 1
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
invoke	<Boolean>	Read-write	Invoke flag.
policyname	<String>	Read-write	Policies bound to this vserver.
__count	<Double>	Read-write	count parameter

Operations

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/crvserver_appflowpolicy_binding **HTTP Method:** PUT

crvserver_cachepolicy_binding

Binding object showing the cachepolicy that can be bound to crvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
targetvserver	<String>	Read-write	Name of the virtual server to which content is forwarded. Applicable only if the policy is a map policy and the cache

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			redirection virtual server is of type REVERSE. Minimum length = 1
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
invoke	<Boolean>	Read-write	Invoke flag.
policyname	<String>	Read-write	Policies bound to this vserver.
bindpoint	<String>	Read-write	The bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST
labeltype	<String>	Read-write	The invocation type. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-write	The priority for the policy.
name	<String>	Read-write	Name of the cache redirection virtual server to which to bind the cache redirection policy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1
labelname	<String>	Read-write	Name of the label invoked.
__count	<Double>	Read-write	count parameter

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/crvserver_cachepolicy_binding **HTTP Method:** PUT

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"crvserver_cspolicy_binding": [ { "__count": "#no"} ] }
```

crvserver_feopolicy_binding

Binding object showing the feopolicy that can be bound to crvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the cache redirection virtual server to which to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			bind the cache redirection policy. Minimum length = 1
bindpoint	<String>	Read-write	The bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST
priority	<Integer>	Read-write	The priority for the policy.
labeltype	<String>	Read-write	Type of label to be invoked. Possible values = reqvserver, resvserver, policylabel
labelname	<String>	Read-write	Name of the label to be invoked.
targetvserver	<String>	Read-write	Name of the virtual server to which content is forwarded. Applicable only if the policy is a map policy and the cache redirection virtual server is of type REVERSE. Minimum length = 1
invoke	<Boolean>	Read-write	Invoke a policy label if this policy's rule evaluates to TRUE.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
policyname	<String>	Read-write	Policies bound to this vserver.
__count	<Double>	Read-write	count parameter

Operations

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/crvserver_feopolicy_binding **HTTP Method:** PUT

crvserver_policymap_binding

Binding object showing the policymap that can be bound to crvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name of the label to be invoked.
priority	<Integer>	Read-write	An unsigned integer that determines the priority of the policy relative to other policies bound to this cache redirection virtual server. The lower the value, higher the priority. Note: This option is available only when binding content switching, filtering, and compression policies to a cache redirection virtual server.
labeltype	<String>	Read-write	Type of label to be invoked. Possible values = reqvserver, resvserver, policylabel
bindpoint	<String>	Read-write	For a rewrite policy, the bind point to which to bind the policy. Note: This parameter applies only to rewrite policies, because content switching policies are evaluated only at request time.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = REQUEST, RESPONSE, ICA_REQUEST
name	<String>	Read-write	Name of the cache redirection virtual server to which to bind the cache redirection policy. Minimum length = 1
policyname	<String>	Read-write	Policies bound to this vserver.
invoke	<Boolean>	Read-write	Invoke a policy label if this policy's rule evaluates to TRUE.
gotopriorityexpression	<String>	Read-write	Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * USE_INVOCATION_RESULT - Applicable if this policy invokes another policy label. If the final goto in the invoked policy label has a value of END, the evaluation stops. If the final goto is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			anything other than END, the current policy label performs a NEXT. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a priority number that is numerically higher than the highest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), b ut does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number incr ements by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
targetvserver	<String>	Read-write	The CSW target server names.
__count	<Double>	Read-write	count parameter

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"crvserver_policymap_binding": [ { "__count": "#no"} ] }
```

crvserver_responderpolicy_binding

Binding object showing the responderpolicy that can be bound to crvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
targetvserver	<String>	Read-write	Name of the virtual server to which content is forwarded. Applicable only if the policy is a map policy and the cache redirection virtual server is of type REVERSE. Minimum length = 1
policyname	<String>	Read-write	Policies bound to this vserver.
invoke	<Boolean>	Read-write	Invoke flag.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
name	<String>	Read-write	Name of the cache redirection virtual server to which to bind the cache redirection policy. Minimum length = 1
bindpoint	<String>	Read-write	For a rewrite policy, the bind point to which to bind the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			policy. Note: This parameter applies only to rewrite policies, because content switching policies are evaluated only at request time. Possible values = REQUEST, RESPONSE, ICA_REQUEST
priority	<Integer>	Read-write	The priority for the policy.
labeltype	<String>	Read-write	The invocation type. Possible values = reqvserver, resvserver, policylabel
labelname	<String>	Read-write	Name of the label invoked.
__count	<Double>	Read-write	count parameter

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

cs

Content Switching

Content Switching configuration. Content Switching feature that enables you to direct traffic to servers on the basis of content.

NAME	DESCRIPTION
csaction	Configuration for Content Switching action
csparameter	Configuration for CS parameter
cspolicy	Configuration for content-switching policy
cspolicy_binding	Binding object showing the resources that can be bound to cspolicy
cspolicy_crvserver_binding	Binding object showing the crvserver that can be bound to cspolicy
cspolicy_cspolicylabel_binding	Binding object showing the cspolicylabel that can be bound to cspolicy
cspolicy_csvserver_binding	Binding object showing the csvserver that can be bound to cspolicy
cspolicylabel	Configuration for CS policy label
cspolicylabel_binding	Binding object showing the resources that can be bound to cspolicylabel
cspolicylabel_cspolicy_binding	Binding object showing the cspolicy that can be bound to cspolicylabel

NAME	DESCRIPTION
csvserver	Configuration for CS virtual server
csvserver_analyticsprofile_binding	Binding object showing the analyticsprofile that can be bound to csvserver
csvserver_appflowpolicy_binding	Binding object showing the appflowpolicy that can be bound to csvserver
csvserver_appfwpolicy_binding	Binding object showing the appfwpolicy that can be bound to csvserver
csvserver_appqoepolicy_binding	Binding object showing the appqoepolicy that can be bound to csvserver
csvserver_auditnslogpolicy_binding	Binding object showing the auditnslogpolicy that can be bound to csvserver
csvserver_auditsyslogpolicy_binding	Binding object showing the auditsyslogpolicy that can be bound to csvserver
csvserver_authorizationpolicy_binding	Binding object showing the authorizationpolicy that can be bound to csvserver
csvserver_binding	Binding object showing the resources that can be bound to csvserver
csvserver_botpolicy_binding	Binding object showing the botpolicy that can be bound to csvserver

NAME	DESCRIPTION
csvserver_cachepolicy_binding	Binding object showing the cachepolicy that can be bound to csvserver
csvserver_cmppolicy_binding	Binding object showing the cmppolicy that can be bound to csvserver
csvserver_contentinspectionpolicy_binding	Binding object showing the contentinspectionpolicy that can be bound to csvserver
csvserver_cspolicy_binding	Binding object showing the cspolicy that can be bound to csvserver
csvserver_domain_binding	Binding object showing the domain that can be bound to csvserver
csvserver_feopolicy_binding	Binding object showing the feopolicy that can be bound to csvserver
csvserver_gslbvserver_binding	Binding object showing the gslbvserver that can be bound to csvserver
csvserver_lbvserver_binding	Binding object showing the lbvserver that can be bound to csvserver
csvserver_responderpolicy_binding	Binding object showing the responderpolicy that can be bound to csvserver
csvserver_rewritepolicy_binding	Binding object showing the rewritepolicy that can be bound to csvserver

NAME	DESCRIPTION
csvserver_spilloverpolicy_binding	Binding object showing the spilloverpolicy that can be bound to csvserver
csvserver_tmtrafficpolicy_binding	Binding object showing the tmtrafficpolicy that can be bound to csvserver
csvserver_transformpolicy_binding	Binding object showing the transformpolicy that can be bound to csvserver
csvserver_vpnvserver_binding	Binding object showing the vpnvserver that can be bound to csvserver

csaction

Configuration for Content Switching action resource.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the content switching action. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Can be changed after the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			content switching action is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my action" or 'my action').
targetlbvserver	<String>	Read-write	Name of the load balancing virtual server to which the content is switched.
targetvserver	<String>	Read-write	Name of the VPN, GSLB or Authentication virtual server to which the content is switched.
targetvserverexpr	<String>	Read-write	Information about this content switching action. Maximum length = 1499
comment	<String>	Read-write	Comments associated with this cs action.
newname	<String>	Read-write	New name for the content switching action. Must begin

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my name" or 'my name'). Minimum length = 1
hits	<Integer>	Read-only	The number of times the action has been taken.
referencecount	<Integer>	Read-only	The number of references to the action.
undefhits	<Integer>	Read-only	The number of times the action resulted in UNDEF.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
builtin	<String[]>	Read-only	. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address> /nitro/v1/config/csaction **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

cspolicy

Configuration for content-switching policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Name for the content switching policy. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Cannot

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			be changed after a policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my policy" or 'my policy'). Minimum length = 1
rule	<String>	Read-write	Expression, or name of a named expression, against which traffic is evaluated. The following requirements apply only to the Citrix ADC CLI: * If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			marks, escape the quotations by using the character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks.
action	<String>	Read-write	Content switching action that names the target load balancing virtual server to which the traffic is switched.
logaction	<String>	Read-write	The log action associated with the content switching policy.
newname	<String>	Read-write	The new name of the content switching policy. Minimum length = 1
vstype	<Integer>	Read-only	Virtual server type.
hits	<Integer>	Read-only	Total number of hits.
labelname	<String>	Read-only	Name of the label invoked.
labeltype	<String>	Read-only	The invocation type. Possible values = reqvserver,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			resvserver, policylabel
priority	<Integer>	Read-only	priority of bound policy.
activepolicy	<Boolean>	Read-only	Indicates whether policy is bound or not.
boundto	<String>	Read-only	Location where policy is bound. Minimum length = 1
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

cspolicy_binding

Binding object which returns the resources bound to cspolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Name of the content switching policy to display. If this parameter is omitted, details of all the policies are displayed. Minimum length = 1
cspolicy_csvserver_binding	<cspolicy_csvserver_binding[]>	Read-only	csvserver that can be bound to cspolicy.
cspolicy_cspolicylabel_binding	<cspolicy_cspolicylabel_binding[]>	Read-only	cspolicylabel that can be bound to cspolicy.
cspolicy_crvserver_binding	<cspolicy_crvserver_binding[]>	Read-only	crvserver that can be bound to cspolicy.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicy_binding/ policyname_value<String>
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cspolicy_binding": [ {

"policyname":<String_value>,

"cspolicy_csvserver_binding":<cspolicy_csvserver_binding[]_value>,

"cspolicy_crvserver_binding":<cspolicy_crvserver_binding[]_value>,

"cspolicy_cspolicylabel_binding":<cspolicy_cspolicylabel_binding[]_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/cspolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cspolicy_binding": [ {

"policyname":<String_value>,

"cspolicy_csvserver_binding":<cspolicy_csvserver_binding[]_value>,

"cspolicy_crvserver_binding":<cspolicy_crvserver_binding[]_value>,

"cspolicy_cspolicylabel_binding":<cspolicy_cspolicylabel_binding[]_value>

}]}
```

cspolicy_crvserver_binding

Binding object showing the crvserver that can be bound to cspolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	Location where policy is bound. Minimum length = 1
policyname	<String>	Read-write	Name of the content switching policy to display. If this parameter is omitted, details of all the policies are displayed. Minimum length = 1
labelname	<String>	Read-only	Name of the label invoked.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			evaluated if the current policy rule evaluates to TRUE. Minimum length = 1 Maximum length = 208
labeltype	<String>	Read-only	The invocation type. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-only	priority of bound policy.
hits	<Integer>	Read-only	Total number of hits.
__count	<Double>	Read-only	count parameter

- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicy_crvserver_binding/ policyname_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ cspolicy_crvserver_binding/ policyname_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of cspolicy_crvserver_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/cspolicy_crvserver_binding/ policyname_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the cspolicy_crvserver_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```

{"cspolicy_crvserver_binding": [ { "__count": "#no"} ] }
```

cspolicy_cspolicylabel_binding

Binding object showing the cspolicylabel that can be bound to cspolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	Location where policy is bound. Minimum length = 1
policyname	<String>	Read-write	Name of the content switching policy to display. If this parameter is omitted, details of all the policies are displayed. Minimum length = 1
hits	<Integer>	Read-only	Total number of hits.
labeltype	<String>	Read-only	The invocation type. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-only	priority of bound policy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-only	Name of the label invoked.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE. Minimum length = 1 Maximum length = 208
__count	<Double>	Read-only	count parameter

cspolicylabel

Configuration for CS policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name for the policy label. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. The label name must be unique within the list of

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			policy labels for content switching. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my policylabel" or 'my policylabel').
cspolicylabeltype	<String>	Read-write	Protocol supported by the policy label. All policies bound to the policy label must either match the specified protocol or be a subtype of that protocol. Available settings function as follows: * HTTP - Supports policies that process HTTP traffic. Used to access unencrypted Web sites. (The default.) * SSL - Supports policies that process HTTPS/ SSL encrypted

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			traffic. Used to access encrypted Web sites. * TCP - Supports policies that process any type of TCP traffic, including HTTP. * SSL_TCP - Supports policies that process SSL-encrypted TCP traffic, including SSL. * UDP - Supports policies that process any type of UDP-based traffic, including DNS. * DNS - Supports policies that process DNS traffic. * ANY - Supports all types of policies except HTTP, SSL, and TCP. * SIP_UDP - Supports policies that process UDP based Session Initiation Protocol (SIP) traffic. SIP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			initiates, manages, and terminates multimedia communications sessions, and has emerged as the standard for Internet telephony (VoIP). * RTSP - Supports policies that process Real Time Streaming Protocol (RTSP) traffic. RTSP provides delivery of multimedia and other streaming data, such as audio, video, and other types of streamed media. * RADIUS - Supports policies that process Remote Authentication Dial In User Service (RADIUS) traffic. RADIUS supports combined authentication, authorization, and auditing services for

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			network management. * MYSQL - Supports policies that process MYSQL traffic. * MSSQL - Supports policies that process Microsoft SQL traffic. Possible values = HTTP, TCP, RTSP, SSL, SSL_TCP, UDP, DNS, SIP_UDP, SIP_TCP, ANY, RADIUS, RDP, MYSQL, MSSQL, ORACLE, DIAMETER, SSL_DIAMETER, FTP, DNS_TCP, SMPP, MQTT, MQTT_TLS, HTTP_QUIC
newname	<String>	Read-write	The new name of the content switching policylabel. Minimum length = 1
numpol	<Integer>	Read-only	number of polices bound to label.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
hits	<Integer>	Read-only	Number of times policy label was invoked.
policyname	<String>	Read-only	Name of the content switching policy.
priority	<Integer>	Read-only	Specifies the priority of the policy.
targetvserver	<String>	Read-only	Name of the virtual server to which to forward requests that match the policy.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
labeltype	<String>	Read-only	Type of policy label invocation. Possible values = policylabel
invoke_labelname	<String>	Read-only	Name of the label to invoke if the current policy rule evaluates to TRUE.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

}]}
```

cspolicylabel_cspolicy_binding

Binding object showing the cspolicy that can be bound to cspolicylabel.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
targetvserver	<String>	Read-write	Name of the virtual server to which to forward requests that match the policy.
policyname	<String>	Read-write	Name of the content switching policy.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
invoke	<Boolean>	Read-write	.
invoke_labelname	<String>	Read-write	Name of the label to invoke if the current policy rule evaluates to TRUE.
labeltype	<String>	Read-write	Type of policy label invocation. Possible values = policylabel
priority	<Integer>	Read-write	Specifies the priority of the policy.
labelname	<String>	Read-write	Name of the policy label to which to bind a content switching policy.
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/cspolicylabel_cspolicy_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"cspolicylabel_cspolicy_binding":{

<b>"labelname":<String_value>,

</b><b>"policyname":<String_value>,

</b><b>"priority":<Integer_value>,

</b>"targetvserver":<String_value>,

"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,

"labeltype":<String_value>,

"invoke_labelname":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicylabel_cspolicy_binding/ labelname_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ cspolicylabel_cspolicy_binding/ labelname_value<String> ? **args= policyname:<String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicylabel_cspolicy_binding/ labelname_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ cspolicylabel_cspolicy_binding/ labelname_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of cspolicylabel_cspolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/cspolicylabel_cspolicy_binding/ labelname_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the cspolicylabel_cspolicy_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "cspolicylabel_cspolicy_binding": [ {

"targetvserver":<String_value>,
```

```
"policyname":<String_value>,

"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,

"invoke_labelname":<String_value>,

"labeltype":<String_value>,

"priority":<Integer_value>,

"labelname":<String_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicylabel_cspolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/cspolicylabel_cspolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "cspolicylabel_cspolicy_binding": [ {

"targetvserver":<String_value>,

"policyname":<String_value>,

"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,

"invoke_labelname":<String_value>,

"labeltype":<String_value>,

"priority":<Integer_value>,

"labelname":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicylabel_cspolicy_binding/ labelname_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"cspolicylabel_cspolicy_binding": [ { "__count": "#no"} ] }
```

csvserver

Configuration for CS virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the content switching virtual server. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Cannot be changed after the CS virtual server is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			marks (for example, my server or my server). Minimum length = 1
td	<Integer>	Read-write	Integer value that uniquely identifies the traffic domain in which you want to configure the entity. If you do not specify an ID, the entity becomes part of the default traffic domain, which has an ID of 0. Minimum value = 0 Maximum value = 4094
servicetype	<String>	Read-write	Protocol used by the virtual server. Possible values = HTTP, SSL, TCP, FTP, RTSP, SSL_TCP, UDP, DNS, SIP_UDP, SIP_TCP, SIP_SSL, ANY, RADIUS, RDP, MYSQL, MSSQL, DIAMETER, SSL_DIAMETER, DNS_TCP, ORACLE, SMPP, PROXY, MONGO, MONGO_TLS,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			MQTT, MQTT_TLS, HTTP_QUIC, DOT, SSL_PROXY
ipv46	<String>	Read-write	IP address of the content switching virtual server. Minimum length = 1
targettype	<String>	Read-write	Virtual server target type. Possible values = GSLB
dnsrecordtype	<String>	Read-write	. Default value: NSGSLB_IPV4 Possible values = A, AAAA, CNAME, NAPTR
persistenceid	<Integer>	Read-write	. Minimum value = 0 Maximum value = 65535
ippattern	<String>	Read-write	IP address pattern, in dotted decimal notation, for identifying packets to be accepted by the virtual server. The IP Mask parameter specifies which part of the destination IP address is matched against the pattern. Mutually exclusive

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			with the IP Address parameter. For example, if the IP pattern assigned to the virtual server is 198.51.100.0 and the IP mask is 255.255.240.0 (a forward mask), the first 20 bits in the destination IP addresses are matched with the first 20 bits in the pattern. The virtual server accepts requests with IP addresses that range from 198.51.96.1 to 198.51.111.254. You can also use a pattern such as 0.0.2.2 and a mask such as 0.0.255.255 (a reverse mask). If a destination IP address matches more than one IP pattern, the pattern with the longest match is selected, and the associated virtual server processes the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			request. For example, if the virtual servers, vs1 and vs2, have the same IP pattern, 0.0.100.128, but different IP masks of 0.0.255.255 and 0.0.224.255, a destination IP address of 198.51.100.128 has the longest match with the IP pattern of vs1. If a destination IP address matches two or more virtual servers to the same extent, the request is processed by the virtual server whose port number matches the port number in the request.
ipmask	<String>	Read-write	IP mask, in dotted decimal notation, for the IP Pattern parameter. Can have leading or trailing non-zero octets (for example, 255.255.240.0 or 0.0.255.255). Accordingly, the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			mask specifies whether the first n bits or the last n bits of the destination IP address in a client request are to be matched with the corresponding bits in the IP pattern. The former is called a forward mask. The latter is called a reverse mask.
range	<Integer>	Read-write	Number of consecutive IP addresses, starting with the address specified by the IP Address parameter, to include in a range of addresses assigned to this virtual server. Default value: 1 Minimum value = 1 Maximum value = 254
port	<Integer>	Read-write	Port number for content switching virtual server. Minimum value = 1 Range 1 - 65535 * in CLI is represented as

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			65535 in NITRO API
ipset	<String>	Read-write	The list of IPv4/IPv6 addresses bound to ipset would form a part of listening service on the current cs vserver. Minimum length = 1
state	<String>	Read-write	Initial state of the load balancing virtual server. Default value: ENABLED Possible values = ENABLED, DISABLED
stateupdate	<String>	Read-write	Enable state updates for a specific content switching virtual server. By default, the Content Switching virtual server is always UP, regardless of the state of the Load Balancing virtual servers bound to it. This parameter interacts with the global setting as follows: Global Level | Vserver Level | Result

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ENABLED ENABLED ENABLED ENABLED DISABLED ENABLED DISABLED ENABLED ENABLED DISABLED DISABLED DISABLED If you want to enable state updates for only some content switching virtual servers, be sure to disable the state update parameter. Default value: DISABLED Possible values = ENABLED, DISABLED, UPDATEONBACKENDUPDATE
cacheable	<String>	Read-write	Use this option to specify whether a virtual server, used for load balancing or content switching,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			routes requests to the cache redirection virtual server before sending it to the configured servers. Default value: NO Possible values = YES, NO
redirecturl	<String>	Read-write	URL to which traffic is redirected if the virtual server becomes unavailable. The service type of the virtual server should be either HTTP or SSL. Caution: Make sure that the domain in the URL does not match the domain specified for a content switching policy. If it does, requests are continuously redirected to the unavailable virtual server. Minimum length = 1
clttimeout	<Integer>	Read-write	Idle time, in seconds, after which the client connection is terminated. The default values are:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			180 seconds for HTTP/SSL-based services. 9000 seconds for other TCP-based services. 120 seconds for DNS-based services. 120 seconds for other UDP-based services. Minimum value = 0 Maximum value = 31536000
precedence	<String>	Read-write	Type of precedence to use for both RULE-based and URL-based policies on the content switching virtual server. With the default (RULE) setting, incoming requests are evaluated against the rule-based content switching policies. If none of the rules match, the URL in the request is evaluated against the URL-based

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			content switching policies. Default value: RULE Possible values = RULE, URL
casesensitive	<String>	Read-write	Consider case in URLs (for policies that use URLs instead of RULES). For example, with the ON setting, the URLs /a/1.html and /A/1.HTML are treated differently and can have different targets (set by content switching policies). With the OFF setting, /a/1.html and /A/1.HTML are switched to the same target. Default value: ON Possible values = ON, OFF
somethod	<String>	Read-write	Type of spillover used to divert traffic to the backup virtual server when the primary virtual server reaches the spillover threshold. Connection spillover is based on the number of connections.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Bandwidth spillover is based on the total Kbps of incoming and outgoing traffic. Possible values = CONNECTION, DYNAMICCONNECTION, BANDWIDTH, HEALTH, LLMQUOTA, NONE
sopersistence	<String>	Read-write	Maintain source-IP based persistence on primary and backup virtual servers. Default value: DISABLED Possible values = ENABLED, DISABLED
sopersistencetimeout	<Integer>	Read-write	Time-out value, in minutes, for spillover persistence. Default value: 2 Minimum value = 2 Maximum value = 1440
sothreshold	<Integer>	Read-write	Depending on the spillover method, the maximum number of connections or the maximum total bandwidth (Kbps)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			that a virtual server can handle before spillover occurs. Minimum value = 1 Maximum value = 4294967287
sobackupaction	<String>	Read-write	Action to be performed if spillover is to take effect, but no backup chain to spillover is usable or exists. Possible values = DROP, ACCEPT, REDIRECT
redirectportrewrite	<String>	Read-write	State of port rewrite while performing HTTP redirect. Default value: DISABLED Possible values = ENABLED, DISABLED
downstateflush	<String>	Read-write	Flush all active transactions associated with a virtual server whose state transitions from UP to DOWN. Do not enable this option for applications that must complete their transactions.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: ENABLED Possible values = ENABLED, DISABLED
backupvserver	<String>	Read-write	Name of the backup virtual server that you are configuring. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Can be changed after the backup virtual server is created. You can assign a different backup virtual server or rename the existing virtual server. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			single quotation marks. Minimum length = 1
disableprimaryondown	<String>	Read-write	Continue forwarding the traffic to backup virtual server even after the primary server comes UP from the DOWN state. Default value: DISABLED Possible values = ENABLED, DISABLED
insertvserveripport	<String>	Read-write	Insert the virtual server's VIP address and port number in the request header. Available values function as follows: VIPADDR - Header contains the vserver's IP address and port number without any translation. OFF - The virtual IP and port header insertion option is disabled. V6TOV4MAPPING - Header contains the mapped IPv4

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			address corresponding to the IPv6 address of the vserver and the port number. An IPv6 address can be mapped to a user-specified IPv4 address using the set ns ip6 command. Possible values = OFF, VIPADDR, V6TOV4MAPPING
vipheader	<String>	Read-write	Name of virtual server IP and port header, for use with the VServer IP Port Insertion parameter. Minimum length = 1
rtspnat	<String>	Read-write	Enable network address translation (NAT) for real-time streaming protocol (RTSP) connections. Default value: OFF Possible values = ON, OFF
authenticationhost	<String>	Read-write	FQDN of the authentication virtual server. The service type of the virtual server should be either HTTP or SSL.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 3 Maximum length = 252
authentication	<String>	Read-write	Authenticate users who request a connection to the content switching virtual server. Default value: OFF Possible values = ON, OFF
listenpolicy	<String>	Read-write	String specifying the listen policy for the content switching virtual server. Can be either the name of an existing expression or an in-line expression. Default value: "NONE"
listenpriority	<Integer>	Read-write	Integer specifying the priority of the listen policy. A higher number specifies a lower priority. If a request matches the listen policies of more than one virtual server the virtual server whose listen policy has the highest priority (the lowest priority

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			number) accepts the request. Default value: 101 Minimum value = 0 Maximum value = 100
authn401	<String>	Read-write	Enable HTTP 401-response based authentication. Default value: OFF Possible values = ON, OFF
authnvsname	<String>	Read-write	Name of authentication virtual server that authenticates the incoming user requests to this content switching virtual server. . Minimum length = 1 Maximum length = 252
push	<String>	Read-write	Process traffic with the push virtual server that is bound to this content switching virtual server (specified by the Push VServer parameter). The service type of the push virtual server

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			should be either HTTP or SSL. Default value: DISABLED Possible values = ENABLED, DISABLED
pushvserver	<String>	Read-write	Name of the load balancing virtual server, of type PUSH or SSL_PUSH, to which the server pushes updates received on the client-facing load balancing virtual server. Minimum length = 1
pushlabel	<String>	Read-write	Expression for extracting the label from the response received from server. This string can be either an existing rule name or an inline expression. The service type of the virtual server should be either HTTP or SSL. Default value: "none"
pushmulticlients	<String>	Read-write	Allow multiple Web 2.0 connections from the same client to connect to the virtual

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			server and expect updates. Default value: NO Possible values = YES, NO
tcpprofilename	<String>	Read-write	Name of the TCP profile containing TCP configuration settings for the virtual server. Minimum length = 1 Maximum length = 127
httpprofilename	<String>	Read-write	Name of the HTTP profile containing HTTP configuration settings for the virtual server. The service type of the virtual server should be either HTTP or SSL. Minimum length = 1 Maximum length = 127
dbprofilename	<String>	Read-write	Name of the DB profile. Minimum length = 1 Maximum length = 127
oracleserverversion	<String>	Read-write	Oracle server version.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: 10G Possible values = 10G, 11G
comment	<String>	Read-write	Information about this virtual server.
mssqlserverversion	<String>	Read-write	The version of the MSSQL server. Default value: 2008R2 Possible values = 70, 2000, 2000SP1, 2005, 2008, 2008R2, 2012, 2014
l2conn	<String>	Read-write	Use L2 Parameters to identify a connection. Possible values = ON, OFF
mysqlprotocolversion	<Integer>	Read-write	The protocol version returned by the mysql vserver. Default value: 10
mysqlserverversion	<String>	Read-write	The server version string returned by the mysql vserver. Minimum length = 1 Maximum length = 31

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mysqlcharacterset	<Integer>	Read-write	The character set returned by the mysql vserver. Default value: 8
mysqlservercapabilities	<Integer>	Read-write	The server capabilities returned by the mysql vserver. Default value: 41613
appflowlog	<String>	Read-write	Enable logging appflow flow information. Default value: ENABLED Possible values = ENABLED, DISABLED
netprofile	<String>	Read-write	The name of the network profile. Minimum length = 1 Maximum length = 127
icmpvsrresponse	<String>	Read-write	Can be active or passive. Default value: PASSIVE Possible values = PASSIVE, ACTIVE
rhistate	<String>	Read-write	A host route is injected according to the setting on the virtual servers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* If set to PASSIVE on all the virtual servers that share the IP address, the appliance always injects the hostroute. * If set to ACTIVE on all the virtual servers that share the IP address, the appliance injects even if one virtual server is UP. * If set to ACTIVE on some virtual servers and PASSIVE on the others, the appliance, injects even if one virtual server set to ACTIVE is UP. Default value: PASSIVE Possible values = PASSIVE, ACTIVE
authnprofile	<String>	Read-write	Name of the authentication profile to be used when authentication is turned on.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnsprofilename	<String>	Read-write	Name of the DNS profile to be associated with the VServer. DNS profile properties will applied to the transactions processed by a VServer. This parameter is valid only for DNS and DNS-TCP VServers. Minimum length = 1 Maximum length = 127
dtls	<String>	Read-write	This option starts/stops the dtls service on the vserver. Default value: OFF Possible values = ON, OFF
persistencetype	<String>	Read-write	Type of persistence for the virtual server. Available settings function as follows: * SOURCEIP - Connections from the same client IP address belong to the same persistence session. * COOKIEINSERT - Connections that have the same

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			HTTP Cookie, inserted by a Set-Cookie directive from a server, belong to the same persistence session. * SSLSESSION - Connections that have the same SSL Session ID belong to the same persistence session. Possible values = SOURCEIP, COOKIEINSERT, SSLSESSION, NONE
persistmask	<String>	Read-write	Persistence mask for IP based persistence types, for IPv4 virtual servers. Minimum length = 1
v6persistmasklen	<Integer>	Read-write	Persistence mask for IP based persistence types, for IPv6 virtual servers. Default value: 128 Minimum value = 1 Maximum value = 128

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
timeout	<Integer>	Read-write	Time period for which a persistence session is in effect. Default value: 2 Minimum value = 0 Maximum value = 1440
cookiename	<String>	Read-write	Use this parameter to specify the cookie name for COOKIE peristence type. It specifies the name of cookie with a maximum of 32 characters. If not specified, cookie name is internally generated.
persistencebackup	<String>	Read-write	Backup persistence type for the virtual server. Becomes operational if the primary persistence mechanism fails. Possible values = SOURCEIP, NONE
backuppersistencetimeout	<Integer>	Read-write	Time period for which backup persistence is in effect. Default value: 2 Minimum value = 2

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 1440
tcpprobeport	<Integer>	Read-write	Port number for external TCP probe. NetScaler provides support for external TCP health check of the vserver status over the selected port. This option is only supported for vservers assigned with an IPAddress or ipset. Minimum value = 1 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
probeprotocol	<String>	Read-write	Citrix ADC provides support for external health check of the vserver status. Select HTTP or TCP probes for healthcheck. Possible values = TCP, HTTP
probesuccessresponsecode	<String>	Read-write	HTTP code to return in SUCCESS case. Default value: "200 OK"

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1 Maximum length = 64
probeport	<Integer>	Read-write	Citrix ADC provides support for external health check of the vserver status. Select port for HTTP/ TCP monitring. Default value: 0 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
quicprofilename	<String>	Read-write	Name of QUIC profile which will be attached to the Content Switching VServer. Minimum length = 1 Maximum length = 255
redirectfromport	<Integer>	Read-write	Port number for the virtual server, from which we absorb the traffic for http redirect. Minimum value = 1 Range 1 - 65535 * in CLI is represented as

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			65535 in NITRO API
mcpprofilename	<String>	Read-write	Name of the MCP profile to attach to this cs vserver. Enables MCP protocol processing.
dnsoverhttps	<String>	Read-write	This option is used to enable/disable DNS over HTTPS (DoH) processing. Default value: DISABLED Possible values = ENABLED, DISABLED
httpsredirecturl	<String>	Read-write	URL to which all HTTP traffic received on the port specified in the -redirectFromPort parameter is redirected.
apiprofile	<String>	Read-write	The API profile where one or more API specs are bounded to. Minimum length = 1
wasmmodule	<String>	Read-write	Name of the WASM module to assign to this virtual server.
aigwprofilename	<String>	Read-write	Name of the AIGW frontend profile. For the content switching

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			vserver to function as AI gateway, this parameter must be set. Once this parameter is set using add cs vserver, it cannot be unset. Minimum length = 1 Maximum length = 255
domainname	<String>	Read-write	Domain name for which to change the time to live (TTL) and/or backup service IP address. Minimum length = 1
ttl	<Integer>	Read-write	. Minimum value = 1
backupip	<String>	Read-write	. Minimum length = 1
cookiedomain	<String>	Read-write	. Minimum length = 1
cookietimeout	<Integer>	Read-write	. Minimum value = 0 Maximum value = 1440
sitedomainttl	<Integer>	Read-write	. Minimum value = 1
newname	<String>	Read-write	New name for the virtual server. Must begin with an ASCII alphanumeric or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my name" or 'my name'). Minimum length = 1
ip	<String>	Read-only	The IP address of the virtual server.
value	<String>	Read-only	The ssl card status for the transparent ssl cs vserver. Possible values = Certkey/ Certkeybundle/Vault not bound/Cert-store not usable, SSL feature disabled

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngname	<String>	Read-only	Nodegroup devno to which this csvserver belongs to.
type	<String>	Read-only	Virtual server type. Possible values = CONTENT, ADDRESS
curstate	<String>	Read-only	The state of the cs vserver. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
status	<Integer>	Read-only	Status.
cachetype	<String>	Read-only	Cache type. Possible values = TRANSPARENT, REVERSE, FORWARD
redirect	<String>	Read-only	Redirect URL string. Possible values = CACHE, POLICY, ORIGIN
homepage	<String>	Read-only	Home page.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnsvservername	<String>	Read-only	DNS vserver name.
domain	<String>	Read-only	Domain.
servicename	<String>	Read-only	Service name.
weight	<Integer>	Read-only	Weight for this service.
cachevserver	<String>	Read-only	Cache vserver name.
targetvserver	<String>	Read-only	target vserver name.
url	<String>	Read-only	URL string.
bindpoint	<String>	Read-only	The bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, MQTT_JUMBO_REQ
gt2gb	<String>	Read-only	This argument has no effect. Default value: DISABLED Possible values = ENABLED, DISABLED
statechangetimesec	<String>	Read-only	Time when last state change happened. Seconds part.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
statechangetimemsec	<Integer>	Read-only	Time at which last state change happened. Milliseconds part.
tickssincelaststatechange	<Integer>	Read-only	Time in 10 millisecond ticks since the last state change.
ruletype	<Integer>	Read-only	Rule type.
lbvserver	<String>	Read-only	Name of the default lb vserver bound. Use this param for Default binding only. For Example: bind cs vserver cs1 -lbvserver lb1. Minimum length = 1
targetlbvserver	<String>	Read-only	target vserver name.
nodefaultbindings	<String>	Read-only	to determine if the configuration will have default ssl CIPHER and ECC curve bindings. Default value: NO Possible values = YES, NO
version	<Integer>	Read-only	Cookie version.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "csvserver": [ { "__count": "#no"} ] }
```

csvserver_analyticsprofile_binding

Binding object showing the analyticsprofile that can be bound to csvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the content switching virtual server to which the content switching policy applies. Minimum length = 1
analyticsprofile	<String>	Read-write	Name of the analytics profile bound to the LB vserver.
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/csvserver_analyticsprofile_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"csvserver_analyticsprofile_binding":{
```

```
<b>"name":<String_value>,

</b>"analyticsprofile":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_analyticsprofile_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ csvserver_analyticsprofile_binding/ name_value<String> ? **args=analyticsprofile: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_analyticsprofile_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ csvserver_analyticsprofile_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of csvserver_analyticsprofile_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/csvserver_analyticsprofile_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the csvserver_analyticsprofile_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "csvserver_analyticsprofile_binding": [ {

"name":<String_value>,

"analyticsprofile":<String_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_analyticsprofile_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/csvserver_analyticsprofile_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "csvserver_analyticsprofile_binding": [ {

"name":<String_value>,

"analyticsprofile":<String_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_analyticsprofile_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"csvserver_analyticsprofile_binding": [ { "__count": "#no"} ] }
```

csvserver_appflowpolicy_binding

Binding object showing the appflowpolicy that can be bound to csvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Policies bound to this vserver.
invoke	<Boolean>	Read-write	Invoke flag.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
targetlbvserver	<String>	Read-write	Name of the Load Balancing virtual server to which the content is switched, if policy rule is evaluated to be TRUE. Example: bind cs vs cs1 -policyname pol1 -priority 101 -targetLBVserver lb1 Note: Use this parameter only in case of Content Switching policy bind operations to a CS vserver. Minimum length = 1
labelname	<String>	Read-write	Name of the label invoked.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Priority for the policy.
labeltype	<String>	Read-write	The invocation type. Possible values = reqvserver, resvserver, policylabel
bindpoint	<String>	Read-write	Bind point at which policy needs to be bound. Note: Content switching policies are evaluated only at request time. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, MQTT_JUMBO_REQ
name	<String>	Read-write	Name of the content switching virtual server to which the content switching policy applies. Minimum length = 1
__count	<Double>	Read-write	count parameter

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * USE_INVOCATION_RESULT - Applicable if this policy invokes another policy label. If the final goto in the invoked policy label has a value of END, the evaluation stops. If the final goto is anything other than END, the current policy label performs a NEXT. * An

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a priority number that is numerically higher than the highest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
invoke	<Boolean>	Read-write	Invoke a policy label if this policy's rule evaluates to TRUE.
policyname	<String>	Read-write	Policies bound to this vserver.
targetlbvserver	<String>	Read-write	Name of the Load Balancing virtual server to which the content is switched, if policy rule is evaluated to be TRUE. Example: bind cs vs cs1 -policyname pol1 -priority 101 -targetLBVserver lb1 Note: Use this

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			parameter only in case of Content Switching policy bind operations to a CS vserver. Minimum length = 1
labelname	<String>	Read-write	Name of the label to be invoked.
name	<String>	Read-write	Name of the content switching virtual server to which the content switching policy applies. Minimum length = 1
bindpoint	<String>	Read-write	Bind point at which policy needs to be bound. Note: Content switching policies are evaluated only at request time. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, MQTT_JUMBO_REQ
labeltype	<String>	Read-write	Type of label to be invoked. Possible values = reqvserver, resvserver, policylabel

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Priority for the policy.
__count	<Double>	Read-write	count parameter

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/csvserver_auditnslogpolicy_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"csvserver_auditnslogpolicy_binding":{

<b>"name":<String_value>,

</b>"policyname":<String_value>,

"targetlbvserver":<String_value>,

"priority":<Integer_value>,

"gotopriorityexpression":<String_value>,

"bindpoint":<String_value>,

"invoke":<Boolean_value>,

"labeltype":<String_value>,

"labelname":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_auditnslogpolicy_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ csvserver_auditnslogpolicy_binding/ name_value<String> ? **args=policyname: <String_value> ,bindpoint: <String_value> ,priority: <Integer_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_auditnslogpolicy_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ csvserver_auditnslogpolicy_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of csvserver_auditnslogpolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/csvserver_auditnslogpolicy_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the csvserver_auditnslogpolicy_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "csvserver_auditnslogpolicy_binding": [ {

"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,

"policyname":<String_value>,

"targetlbvserver":<String_value>,

"labelname":<String_value>,

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"csvserver_auditnslogpolicy_binding": [ { "__count": "#no"} ] }
```

csvserver_auditsyslogpolicy_binding

Binding object showing the auditsyslogpolicy that can be bound to csvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name of the label to be invoked.
name	<String>	Read-write	Name of the content switching virtual server to which the content switching policy applies. Minimum length = 1
priority	<Integer>	Read-write	Priority for the policy.
labeltype	<String>	Read-write	Type of label to be invoked. Possible values = reqvserver,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			resvserver, policylabel
bindpoint	<String>	Read-write	Bind point at which policy needs to be bound. Note: Content switching policies are evaluated only at request time. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, MQTT_JUMBO_REQ
invoke	<Boolean>	Read-write	Invoke a policy label if this policy's rule evaluates to TRUE.
gotopriorityexpression	<String>	Read-write	Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * USE_INVOCATION_RESULT - Applicable if this policy invokes another policy label.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			If the final goto in the invoked policy label has a value of END, the evaluation stops. If the final goto is anything other than END, the current policy label performs a NEXT. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a priority number that is numerically higher than the highest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
policyname	<String>	Read-write	Policies bound to this vserver.
targetlbvserver	<String>	Read-write	Name of the Load Balancing virtual server to which the content is switched, if policy rule is evaluated to be TRUE. Example:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			bind cs vs cs1 -policyname pol1 -priority 101 -targetLBVserver lb1 Note: Use this parameter only in case of Content Switching policy bind operations to a CS vserver. Minimum length = 1
__count	<Double>	Read-write	count parameter

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/csvserver_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```

csvserver_botpolicy_binding

Binding object showing the botpolicy that can be bound to csvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name of the label invoked.
priority	<Integer>	Read-write	Priority for the policy.
labeltype	<String>	Read-write	The invocation type. Possible values = reqvserver, resvserver, policylabel
bindpoint	<String>	Read-write	Bind point at which policy needs to be bound. Note: Content switching policies are evaluated only at request time. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			MQTT_JUMBO_REQ
name	<String>	Read-write	Name of the content switching virtual server to which the content switching policy applies. Minimum length = 1
policyname	<String>	Read-write	Policies bound to this vserver.
invoke	<Boolean>	Read-write	Invoke flag.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
targetlbvserver	<String>	Read-write	Name of the Load Balancing virtual server to which the content is switched, if policy rule is evaluated to be TRUE. Example: bind cs vs cs1 -policyname pol1 -priority 101 -targetLBVserver lb1 Note: Use this parameter only in case of Content Switching policy bind operations to a CS vserver. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-write	count parameter

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/csvserver_botpolicy_binding **HTTP Method:** PUT

{"csvserver_contentinspectionpolicy_binding": [ { "__count": "#no"} ] }
```

csvserver_cspolicy_binding

Binding object showing the cspolicy that can be bound to csvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
targetlbvserver	<String>	Read-write	target vserver name.
policyname	<String>	Read-write	Policies bound to this vserver.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
invoke	<Boolean>	Read-write	Invoke flag.
name	<String>	Read-write	Name of the content switching virtual server to which the content switching policy applies. Minimum length = 1
bindpoint	<String>	Read-write	The bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, MQTT_JUMBO_REQ
labeltype	<String>	Read-write	The invocation type. Possible values = reqvserver, resvserver, policylabel

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Priority for the policy.
labelname	<String>	Read-write	Name of the label invoked.
cookieipport	<String>	Read-only	Vserver id of the lb vserver that is inserted into the set-cookie HTTP header.
hits	<Integer>	Read-only	Number of hits.
pipolicyhits	<Integer>	Read-only	Number of hits.
vserverid	<String>	Read-only	Vserver Id of vserver.
rule	<String>	Read-only	Rule.
__count	<Double>	Read-only	count parameter

Operations

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/csvserver_cspolicy_binding **HTTP Method:** PUT

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/csvserver_gslbvserver_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"csvserver_gslbvserver_binding":{

<b>"name":<String_value>,

</b>"vserver":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_gslbvserver_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ csvserver_gslbvserver_binding/ name_value<String> ? **args=vserver: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_gslbvserver_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ csvserver_gslbvserver_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of csvserver_gslbvserver_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/csvserver_gslbvserver_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the csvserver_gslbvserver_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "csvserver_gslbvserver_binding": [ {

"name":<String_value>,

"vserver":<String_value>,

"hits":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_gslbvserver_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/csvserver_gslbvserver_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "csvserver_gslbvserver_binding": [ {

"name":<String_value>,

"vserver":<String_value>,

"hits":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_gslbvserver_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"csvserver_gslbvserver_binding": [ { "__count": "#no"} ] }
```

csvserver_lbvserver_binding

Binding object showing the lbvserver that can be bound to csvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
targetvserver	<String>	Read-write	The virtual server name (created with the add lb vserver command) to which content will be switched. Minimum length = 1
lbvserver	<String>	Read-write	Name of the default lb vserver bound. Use this param for Default binding only. For Example: bind cs vserver cs1 -lbvserver lb1. Minimum length = 1
name	<String>	Read-write	Name of the content switching virtual server to which the content switching policy applies. Minimum length = 1
cookieipport	<String>	Read-only	Vserver id of the lb vserver that is inserted into the set-cookie HTTP header.
vserverid	<String>	Read-only	Vserver Id of vserver.
hits	<Integer>	Read-only	Number of hits.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/csvserver_lbvserver_binding **HTTP Method:** PUT

Request Headers:
