- GET
- COUNT
- RENAME
- CHECK

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "vpnvserver": [ { "__count": "#no"} ] }
```

vpnvserver_aaapreauthenticationpolicy_binding

Binding object showing the aaapreauthenticationpolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Applicable only to advance vpn session policy. Expression or other value specifying the next policy to evaluate if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a number that is larger than the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			largest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/vpnvserver_aaapreauthenticationpolicy_binding
HTTP Method: PUT

Request Headers:

```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_aaapreauthenticationpolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_aaapreauthenticationpolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "vpnvserver_aaapreauthenticationpolicy_binding": [ {

"gotopriorityexpression":<String_value>,

"policy":<String_value>,

"groupextraction":<Boolean_value>,

"bindpoint":<String_value>,

"priority":<Integer_value>,

"name":<String_value>,

"secondary":<Boolean_value>,

"acttype":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_aaapreauthenticationpolicy_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"vpnvserver_aaapreauthenticationpolicy_binding": [ { "__count":
"#no"} ] }
```

vpnvserver_analyticsprofile_binding

Binding object showing the analyticsprofile that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
analyticsprofile	<String>	Read-write	Name of the analytics profile bound to the VPN Vserver.
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/vpnvserver_analyticsprofile_binding **HTTP Method:** PUT

Request Headers:

vpnvserver_appflowpolicy_binding

Binding object showing the appflowpolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Next priority expression.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
bindpoint	<String>	Read-write	Bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			methods, but they can require different passwords.
__count	<Double>	Read-write	count parameter

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
gotopriorityexpression	<String>	Read-write	Applicable only to advance vpn session policy. Expression or other value specifying the next policy to evaluate if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a number that is larger than the largest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
name	<String>	Read-write	Name of the virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/vpnvserver_auditnslogpolicy_binding **HTTP Method:** PUT

Request Headers:

vpnvserver_authenticationdfapolicy_binding

Binding object showing the authenticationdfapolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Applicable only to advance vpn session policy. Expression or other value specifying the next policy to evaluate if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a number that is larger than the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			largest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/vpnvserver_authenticationdfapolicy_binding
HTTP Method: PUT

vpnvserver_authenticationldappolicy_binding

Binding object showing the authenticationldappolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
gotopriorityexpression	<String>	Read-write	Applicable only to advance vpn session policy. Expression or other value specifying the next policy to evaluate if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a number that is larger than the largest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			85 does not exist in the policy label.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

```

vpnvserver_authenticationnegotiatepolicy_binding

Binding object showing the authenticationnegotiatepolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
gotopriorityexpression	<String>	Read-write	Applicable only to advance vpn session policy. Expression or other value specifying the next policy to evaluate if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a number that is larger than the largest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

vpnvserver_authenticationradiuspolicy_binding

Binding object showing the authenticationradiuspolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Applicable only to advance vpn session policy. Expression or other value specifying the next policy to evaluate if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a number that is larger than the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			largest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a number that is larger than the largest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85).

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/vpnvserver_authenticationtacacspolicy_binding
HTTP Method: PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"vpnvserver_authenticationtacacspolicy_binding":{

<b>"name":<String_value>,
```

```
</b>"policy":<String_value>,

"priority":<Integer_value>,

"secondary":<Boolean_value>,

"groupextraction":<Boolean_value>,

"gotopriorityexpression":<String_value>,

"bindpoint":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_authenticationtacacspolicy_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_authenticationtacacspolicy_binding/ name_value<String> ? **args=policy: <String_value> ,secondary: <Boolean_value> ,groupextraction: <Boolean_value> ,bindpoint: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_authenticationtacacspolicy_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_authenticationtacacspolicy_binding/

name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of vpnvserver_authenticationtacacspolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_authenticationtacacspolicy_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the vpnvserver_authenticationtacacspolicy_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "vpnvserver_authenticationtacacspolicy_binding": [ {

```

vpnvserver_authenticationwebauthpolicy_binding

Binding object showing the authenticationwebauthpolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
gotopriorityexpression	<String>	Read-write	Applicable only to advance vpn session policy. Expression or other value specifying the next policy to evaluate if

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a number that is larger than the largest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

vpnvserver_cachepolicy_binding

Binding object showing the cachepolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
gotopriorityexpression	<String>	Read-write	Next priority expression.
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
bindpoint	<String>	Read-write	Bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
__count	<Double>	Read-write	count parameter

Operations

- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			or secondary authentication has succeeded.
gotopriorityexpression	<String>	Read-write	Next priority expression.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
__count	<Double>	Read-write	count parameter

Operations

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/vpnvserver_icapolicy_binding **HTTP Method:** PUT

A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			both authentication methods, but they can require different passwords.
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/vpnvserver_rewritepolicy_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"vpnvserver_rewritepolicy_binding":{

<b>"name":<String_value>,

</b>"policy":<String_value>,

"priority":<Integer_value>,

"secondary":<Boolean_value>,

"groupextraction":<Boolean_value>,

"gotopriorityexpression":<String_value>,

"bindpoint":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_rewritepolicy_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_rewritepolicy_binding/ name_value<String> ? **args=policy: <String_value> ,secondary: <Boolean_value> ,groupextraction: <Boolean_value> ,bindpoint: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_rewritepolicy_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_rewritepolicy_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of vpnvserver_rewritepolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_rewritepolicy_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the vpnvserver_rewritepolicy_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "vpnvserver_rewritepolicy_binding": [ {

"gotopriorityexpression":<String_value>,

"policy":<String_value>,

"groupextraction":<Boolean_value>,

"priority":<Integer_value>,

"bindpoint":<String_value>,

"name":<String_value>,

"secondary":<Boolean_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_rewritepolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_rewritepolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "vpnvserver_rewritepolicy_binding": [ {

vpnvserver_vpnclientlessaccesspolicy_binding

Binding object showing the vpnclientlessaccesspolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the virtual server. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
bindpoint	<String>	Read-write	Bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
gotopriorityexpression	<String>	Read-write	Next priority expression.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnclientlessaccesspolicy_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_vpnclientlessaccesspolicy_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of vpnvserver_vpnclientlessaccesspolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_vpnclientlessaccesspolicy_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the vpnvserver_vpnclientlessaccesspolicy_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "vpnvserver_vpnclientlessaccesspolicy_binding": [ {

"name":<String_value>,
```

```
"secondary":<Boolean_value>,

"priority":<Integer_value>,

"bindpoint":<String_value>,

"gotopriorityexpression":<String_value>,

"policy":<String_value>,

"groupextraction":<Boolean_value>,

"acttype":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnclientlessaccesspolicy_binding
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnclientlessaccesspolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "vpnvserver_vpnclientlessaccesspolicy_binding": [ {

"name":<String_value>,

"secondary":<Boolean_value>,

"priority":<Integer_value>,

"bindpoint":<String_value>,

"gotopriorityexpression":<String_value>,

"policy":<String_value>,

"groupextraction":<Boolean_value>,

"acttype":<Integer_value>

}]}
```

COUNT

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnclientlessaccesspolicy_binding/name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"vpnvserver_vpnclientlessaccesspolicy_binding": [ { "__count": "#no"} ] }
```

vpnvserver_vpnepaprofile_binding

Binding object showing the vpnepaprofile that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
epaprofileoptional	<Boolean>	Read-write	Mark the EPA profile optional for preauthentication EPA profile. User would be shown a logon page even if the EPA profile fails to evaluate.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
epaprofile	<String>	Read-write	Advanced EPA profile to bind.
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/vpnvserver_vpnepaprofile_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"vpnvserver_vpnepaprofile_binding":{
```

```
<b>"name":<String_value>,

</b>"epaprofile":<String_value>,

"epaprofileoptional":<Boolean_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnepaprofile_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_vpnepaprofile_binding/ name_value<String> ? **args=epaprofile: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnepaprofile_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_vpnepaprofile_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of vpnvserver_vpnepaprofile_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnepaprofile_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the vpnvserver_vpnepaprofile_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/vpnvserver_vpnportaltheme_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"vpnvserver_vpnportaltheme_binding":{

<b>"name":<String_value>,

</b>"portaltheme":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnportaltheme_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_vpnportaltheme_binding/ name_value<String> ? **args=portaltheme: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnportaltheme_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_vpnportaltheme_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of vpnvserver_vpnportaltheme_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnportaltheme_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the vpnvserver_vpnportaltheme_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "vpnvserver_vpnportaltheme_binding": [ {

"portaltheme":<String_value>,

"name":<String_value>,

"acttype":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnportaltheme_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnportaltheme_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "vpnvserver_vpnportaltheme_binding": [ {

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"vpnvserver_vpnportaltheme_binding": [ { "__count": "#no"} ] }
```

vpnvserver_vpnsecureprivateaccessprofile_binding

Binding object showing the vpnsecureprivateaccessprofile that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
secureprivateaccessprofile	<String>	Read-write	Name of the Secure Private Access profile bound to the vserver. Minimum length = 1 Maximum length = 31
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

```

vpnvserver_vpnsessionpolicy_binding

Binding object showing the vpnsessionpolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
gotopriorityexpression	<String>	Read-write	Applicable only to advance vpn session policy. Expression or other value specifying the next policy to evaluate if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			priority is evaluated next. * If the expression evaluates to a number that is larger than the largest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"vpnvserver_vpntrafficpolicy_binding": [ { "__count": "#no"} ] }
```

vpnvserver_vpnurl_binding

Binding object showing the vpnurl that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
urlname	<String>	Read-write	The intranet URL.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ADD

URL: http:// <netscaler-ip-address /nitro/v1/config/vpnvserver_vpnurl_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"vpnvserver_vpnurl_binding":{

<b>"name":<String_value>,

</b>"urlname":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

DELETE

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnurl_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_vpnurl_binding/ name_value<String> ? **args=urlname: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

GET

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnurl_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ vpnvserver_vpnurl_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of vpnvserver_vpnurl_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnurl_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the vpnvserver_vpnurl_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "vpnvserver_vpnurl_binding": [ {

"urlname":<String_value>,

"name":<String_value>,

"acttype":<Integer_value>

}]}
```

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnurl_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/vpnvserver_vpnurl_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "vpnvserver_vpnurl_binding": [ {

"urlname":<String_value>,

"name":<String_value>,

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"vpnvserver_vpnurl_binding": [ { "__count": "#no"} ] }
```

vpnvserver_vpnurlpolicy_binding

Binding object showing the vpnurlpolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, AAA_REQUEST, AAA_RESPONSE
priority	<Integer>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 0 Maximum value = 2147483647
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			called if primary and/ or secondary authentication has succeeded.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
gotopriorityexpression	<String>	Read-write	Next priority expression.
acttype	<Integer>	Read-only	.
__count	<Double>	Read-only	count parameter

Statistics

The statistics API is arranged in a logical groups of objects. Choose an appropriate group to find more details.

NAME	DESCRIPTION
AAA	Authentication, authorization, and accounting service statistics.
Api	API statistics
Appflow	AppFlow statistics.
Application Firewall	Application Firewall statistics.
Appqoe	Application Level Quality of Experience statistics
Audit	Audit statistics.

NAME	DESCRIPTION
Authentication	Authentication statistics.
Authorization	Authorization statistics. Authorization services check which resources users are authorized to access, and grant permissions accordingly.
Autoscale	AutoScale statistics.
Basic	Basic system statistics.
Bot	Bot Management.
Integrated Caching	Integrated Caching statistics. The Integrated Caching feature is used to cache static and dynamic web application data.
Cloud	Citrix ADC as SD proxy statistics and cloud discovery commands.
Cluster	Cluster commands.
Compression	Compression statistics. The system's feature for compressing HTTP responses to compression-aware browsers.
CI	Content Inspection
Cache Redirection	Cache redirection statistics. The cache redirection feature can transparently redirect cacheable HTTP requests to a cache and send non-cacheable or dynamic HTTP

NAME	DESCRIPTION
	requests to the origin server. A cache stores or caches frequently requested web content and serves such web content to a client on behalf of the origin servers, alleviating the load on the origin server farm.
Content Switching	Content Switching statistics. Content Switching feature that enables you to direct traffic to servers on the basis of content.
Denylist	Denylist level statistics.
Domain Name Service	Domain Name Service(DNS) statistics.
Front-end-optimization	Front end optimization statistics. The system's feature to optimize Web content for performance.
Global Server Load Balancing	Global Server Load Balancing (GSLB) statistics. GSLB feature ensures that client requests are directed to a best performing site available in a global enterprise and distributed Internet environment.
High Availability	High-availability commands.
Ica	ICA statistics.
Insight	Insight statistics.
Ipsec	IPSEC statistics.

NAME	DESCRIPTION
Ipsecalg	IPSECALG statistics.
Load Balancing	Load Balancing statistics. The load balancing methods manage the selection of an appropriate physical server in a server farm.
LLDP	Link Layer Discovery Protocol.
Lsn	Large Scale NAT commands
Network	Networking commands.
NS	System/Global level statistics.
Pcp	Port Control Protocol statistics.
Protocol	Protocol statistics.
Qos	QoS statistics.
Rdp	RDP statistics.
Responder	Responder statistics.
Rewrite	Rewrite statistics.
SNMP	SNMP(Simple Network Management Protocol) statistics.

NAME	DESCRIPTION
Spillover	Spillover policies and actions.
SSL	SSL statistics
Stream	Stream statistics.
System	System statistics.
Traffic Management	TM session/policy statistics.
Transform	URL Transformation statistics.
Tunnel	SSL VPN Tunnel statistics.
User	User protocol statistics.
VideoOptimization	Video optimization feature is used to show (i) the stats of different media types that are being served by the Citrix ADC and (ii) the details of optimization applied on ABR videos
SSL VPN	Virtual Private Network statistics.

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/aaa **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/aaa? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get aaa resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/aaa? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

api

Api

API statistics

NAME	DESCRIPTION
apispec	Statistics for API specification resource.

apispec

Statistics for API specification resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the api spec for which to display stats. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
apispechits	<Double>	Read-only	Number of received requests for the API specification.
apispechitsrate	<Double>	Read-only	Rate (/s) counter for apispechits
apispecsuccessfullyvalidated	<Double>	Read-only	Number of successfully validated requests for the API specification.
apispecsuccessfullyvalidatedrate	<Double>	Read-only	Rate (/s) counter for apispecsuccessfullyvalidated
apispecunmatched	<Double>	Read-only	Number of requests non matching this API specification.
apispecunmatchedrate	<Double>	Read-only	Rate (/s) counter for apispecunmatched

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/apispec **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/apispec? **args=name: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get apispec resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/apispec? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

appfirewalllogtransformsqlrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogtransformsql
appfirewalllogfieldformat	<Double>	Read-only	Number of Field Format security check log messages

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			generated by the Application Firewall.
appfirewalllogfieldformatrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogfieldformat
appfirewalllogfieldconsistency	<Double>	Read-only	Number of Field Consistency security check log messages generated by the Application Firewall.
appfirewalllogfieldconsistencyrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogfieldconsistency
appfirewalllogcreditcard	<Double>	Read-only	Number of Credit Card security check log messages generated by the Application Firewall.
appfirewalllogcreditcardrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogcreditcard
appfirewalllogsafeobject	<Double>	Read-only	Number of Safe Object security check log messages generated by the Application Firewall.
appfirewalllogsafeobjectrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogsafeobject
appfirewallsignaturelogs	<Double>	Read-only	Number of Signature logs generated by the Application Firewall.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
appfirewallsignaturelogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallsignaturelogs
appfirewalllogcontenttype	<Double>	Read-only	Number of content type security check log messages generated by the Application Firewall.
appfirewalllogcontenttyperate	<Double>	Read-only	Rate (/s) counter for appfirewalllogcontenttype
appfirewalllogsjsondos	<Double>	Read-only	Number of JSON Denial-of-Service security check log messages generated by the Application Firewall.
appfirewalllogsjsondosrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogsjsondos
appfirewalllogsjsonsql	<Double>	Read-only	Number of JSON SQL Injection security check log messages generated by the Application Firewall.
appfirewalllogsjsonsqlrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogsjsonsql
appfirewalllogsjsonxss	<Double>	Read-only	Number of JSON Cross-Site Scripting (XSS) security check log messages

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			generated by the Application Firewall.
appfirewalllogsjsonxsrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogsjsonxss
appfirewalllogsjsoncmd	<Double>	Read-only	Number of JSON Command Injection security check log messages generated by the Application Firewall.
appfirewalllogsjsoncmdrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogsjsoncmd
appfirewalllogfileuploadtypes	<Double>	Read-only	Number of File Upload Types security check log messages generated by the Application Firewall.
appfirewalllogfileuploadtypesrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogfileuploadtypes
appfirewalllogxmlpayloadcontenttypemismatch	<Double>	Read-only	Number of Mismatched Content-Type in request with XML Payload security check logs seen by the Application Firewall.
appfirewalllogxmlpayloadcontenttypemismatchrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogxmlpay

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			loadcontenttypemismatch
appfirewalllogcmd	<Double>	Read-only	Number of HTML Command Injection security check log messages generated by the Application Firewall.
appfirewalllogcmdrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogcmd
appfirewallwellformednesslogs	<Double>	Read-only	Number of XML Format security check log messages generated by the Application Firewall.
appfirewallwellformednesslogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallwellformednesslogs
appfirewallxdoslogs	<Double>	Read-only	Number of XML Denial-of-Service security check log messages generated by the Application Firewall.
appfirewallxdoslogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallxdoslogs
appfirewallmsgvallogs	<Double>	Read-only	Number of XML Message Validation security check log messages generated by the Application Firewall.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
appfirewallmsgvallogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallmsgvallogs
appfirewallwsilogs	<Double>	Read-only	Number of Web Services Interoperability (WS-I) security check log messages generated by the Application Firewall.
appfirewallwsilogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallwsilogs
appfirewallxmlsqllogs	<Double>	Read-only	Number of XML SQL Injection security check log messages generated by the Application Firewall.
appfirewallxmlsqllogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallxmlsqllogs
appfirewallxmlxsslogs	<Double>	Read-only	Number of XML Cross-Site Scripting (XSS) security check log messages generated by the Application Firewall.
appfirewallxmlxsslogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallxmlxsslogs
appfirewallxmlattachmentlogs	<Double>	Read-only	Number of XML Attachment security check log messages generated by the Application Firewall.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
appfirewallxmlattachmentlogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallxmlattachmentlogs
appfirewallxmlsoapfaultlogs	<Double>	Read-only	Number of requests generating soap:fault log messages
appfirewallxmlsoapfaultlogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallxmlsoapfaultlogs
appfirewallxmlgenlogs	<Double>	Read-only	Number of requests generating XML generic error log messages
appfirewallxmlgenlogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallxmlgenlogs
appfirewalllogsqlgram	<Double>	Read-only	Number of HTML SQL Injection security check log messages (reported by SQL grammar) generated by the Application Firewall.
appfirewalllogsqlgramrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogsqlgram
appfirewalllogsjsonsqlgram	<Double>	Read-only	Number of JSON SQL Injection security check log messages (reported by SQL grammar) generated by the Application Firewall.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
appfirewalllogsjsonsqlgramrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogsjsonsqlgram
appfirewalllogcmdgram	<Double>	Read-only	Number of HTML CMD Injection security check log messages (reported by CMD grammar) generated by the Application Firewall.
appfirewalllogcmdgramrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogcmdgram
appfirewalllogsjsoncmdgram	<Double>	Read-only	Number of JSON CMD Injection security check log messages (reported by CMD grammar) generated by the Application Firewall.
appfirewalllogsjsoncmdgramrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogsjsoncmdgram
appfirewalllogblockkeyword	<Double>	Read-only	Number of HTML Block Keyword security check log messages generated by the Application Firewall.
appfirewalllogblockkeywordrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogblockkeyword
appfirewalllogjsonblockkeyword	<Double>	Read-only	Number of JSON Block Keyword

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			security check log messages generated by the Application Firewall.
appfirewalllogjsonblockkeywordrate	<Double>	Read-only	Rate (/s) counter for appfirewalllogjsonblockkeyword
appfirewallret4xx	<Double>	Read-only	Number of requests returning HTTP 4xx from the backend server
appfirewallret4xxrate	<Double>	Read-only	Rate (/s) counter for appfirewallret4xx
appfirewallret5xx	<Double>	Read-only	Number of requests returning HTTP 5xx from the backend server
appfirewallret5xxrate	<Double>	Read-only	Rate (/s) counter for appfirewallret5xx
appfirewallcfgstarturlclosure	<Double>	Read-only	Number of profiles with Start URL Closure enabled in the Application Firewall.
appfirewallcfgcookietransforms	<Double>	Read-only	Number of profiles with Config Cookie Transforms enabled in the Application Firewall.
appfirewallcfgcrosssitescriptingtransformunsafehtml	<Double>	Read-only	Number of profiles with CrossSite Scripting Transform Unsafe HTML

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			enabled in the Application Firewall.
appfirewallcfgcrosssitescriptingcheckcompleteurls	<Double>	Read-only	Number of profiles with CrossSite Scripting Check Complete URLs enabled in the Application Firewall.
appfirewallcfgsqlinjectiongrammar	<Double>	Read-only	Number of profiles with SQL Injection Grammar enabled in the Application Firewall.
appfirewallcfgsqlinjectiontransformspecialchars	<Double>	Read-only	Number of profiles with SQL Injection Transform Special Characters enabled in the Application Firewall.
appfirewallcfgsqlinjectioncheckcsqlwildchars	<Double>	Read-only	Number of profiles with SQL Injection Check SQL Wild Characters enabled in the Application Firewall.
appfirewallcfgcreditcardxout	<Double>	Read-only	Number of profiles with Credit Card XOut enabled in the Application Firewall.
appfirewallcfgdosecurecreditcardlogging	<Double>	Read-only	Number of profiles with Do Secure Credit Card Logging enabled in the Application Firewall.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
appfirewallcfgstreaming	<Double>	Read-only	Number of profiles with Streaming enabled in the Application Firewall.
appfirewallcfgtrace	<Double>	Read-only	Number of profiles with Trace enabled in the Application Firewall.
appfirewallcfgjsonsqlinjectiongrammar	<Double>	Read-only	Number of profiles with JSON SQL Injection Grammar enabled in the Application Firewall.
appfirewallcfgxmlsqlinjectionchecksqlwildchars	<Double>	Read-only	Number of profiles with XML SQL Injection Check SQL Wild Chars enabled in the Application Firewall.
appfirewallcfgusehtmlerrorobject	<Double>	Read-only	Number of profiles with Use HTML Error Object enabled in the Application Firewall.
appfirewallcfglogeverypolicyhit	<Double>	Read-only	Number of profiles with Log Every Policy Hit enabled in the Application Firewall.
appfirewallcfgexemptclosureurlsfromsecuritychecks	<Double>	Read-only	Number of profiles with Exempt Closure URLs From Security Checks enabled in the Application Firewall.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
appfirewallcfgcanonicalizehtmlresponse	<Double>	Read-only	Number of profiles with Canonicalize HTML Response enabled in the Application Firewall.
appfirewallcfgenableformtagging	<Double>	Read-only	Number of profiles with Enable Form Tagging enabled in the Application Firewall.
appfirewallcfgsessionlessurlclosure	<Double>	Read-only	Number of profiles with Sessionless URL Closure enabled in the Application Firewall.
appfirewallcfgsemicolonfieldseparator	<Double>	Read-only	Number of profiles with Semicolon Field Separator enabled in the Application Firewall.
appfirewallcfgexcludefileuploadfromchecks	<Double>	Read-only	Number of profiles with Exclude File Upload From Checks enabled in the Application Firewall.
appfirewallcfgcheckrequestheaders	<Double>	Read-only	Number of profiles with Check Request Headers enabled in the Application Firewall.
appfirewallcfgoptimizepartialreqs	<Double>	Read-only	Number of profiles with Optimize Partial Reqs enabled in the Application Firewall.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
appfirewallcfgurldecoderequestcookies	<Double>	Read-only	Number of profiles with URL Decode Request Cookies enabled in the Application Firewall.
appfirewallcfgpercentdecoderecursively	<Double>	Read-only	Number of profiles with Percent Decode Recursively enabled in the Application Firewall.
appfirewallcfginsertcookiesamesiteattribute	<Double>	Read-only	Number of profiles with Insert Cookie SameSite Attribute enabled in the Application Firewall.
appfirewallcfgfakeaccountdetection	<Double>	Read-only	Number of profiles with Fake Account Detection enabled in the Application Firewall.
appfirewallcfgfieldscanenabled	<Double>	Read-only	Number of profiles with field scan enabled in the Application Firewall.
appfirewallcfgfieldscanenabledjson	<Double>	Read-only	Number of profiles with JSON field scan enabled in the Application Firewall.
appfirewallcfgmessagescanenabled	<Double>	Read-only	Number of profiles with message scan enabled in the Application Firewall.
appfirewallcfgmessagescanenabledjson	<Double>	Read-only	Number of profiles with JSON message

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			scan enabled in the Application Firewall.

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/appfw **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/appfw? **args=detail: <Boolean_value> ,fullvalues:**

<Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>

Use this query-parameter to get appfw resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/appfw? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

appfwpolicy

Statistics for application firewall policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the application firewall policy. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pipolicyhits	<Double>	Read-only	Number of hits on the policy
pipolicyhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyhits
pipolicyundefhits	<Double>	Read-only	Number of undef hits on the policy
pipolicyundefhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyundefhits

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/appfwpolicy **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/appfwpolicy? **args=name: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get appfwpolicy resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/appfwpolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

URL: http:// <netscaler-ip-address> /nitro/v1/stat/appfwpolicy/ name_value><String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "appfwpolicy": [ {

"name":<String_value>,

"pipolicyundefhitsrate":<Double_value>,

"pipolicyhitsrate":<Double_value>,

"pipolicyundefhits":<Double_value>,

"pipolicyhits":<Double_value>

}]}
```

appfwpolicylabel

Statistics for application firewall policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name of the application firewall policy label. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pipolicylabelhits	<Double>	Read-only	Number of times policy label was invoked.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pipolicylabelhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicylabelhits

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/appfwpolicylabel **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/appfwpolicylabel? **args=labelname: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get appfwpolicylabel resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/appfwpolicylabel? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "appfwpolicylabel": [ {

"labelname":<String_value>,

"pipolicylabelhits":<Double_value>,

"pipolicylabelhitsrate":<Double_value>

}]}
```

GET

URL: http:// <netscaler-ip-address> /nitro/v1/stat/appfwpolicylabel/ labelname_value><String>
HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```

appfirewallcfginsertcookiesamesiteattributeperprofile	<Double>	Read-only	Number of profiles with Insert Cookie SameSite Attribute enabled in the Application Firewall.
appfirewallcfgfakeaccountdetectionperprofile	<Double>	Read-only	Number of profiles with Fake Account Detection enabled in the Application Firewall.
appfirewallcfgfieldscanenabledperprofile	<Double>	Read-only	Field Scan enabled in the Application Firewall profile.
appfirewallcfgfieldscanenabledjsonperprofile	<Double>	Read-only	JSON Field Scan enabled in the Application Firewall profile.
appfirewallcfgmessagescanenabledperprofile	<Double>	Read-only	Message Scan enabled in the Application Firewall profile.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
appfirewallcfgmessagescanenabledjsonperprofile	<Double>	Read-only	JSON Message Scan enabled in the Application Firewall profile.

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/appfwprofile **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/appfwprofile? **args=name: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get appfwprofile resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/appfwprofile? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/appqoe **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/appqoe? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get appqoe resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/appqoe? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```

audit

Audit

Audit statistics.

NAME	DESCRIPTION
audit	Statistics for audit.

audit

Statistics for audit.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
auditsyslogmsgsent	<Double>	Read-only	Syslog messages sent to the syslog server(s) over UDP.
auditsyslogmsgsentrate	<Double>	Read-only	Rate (/s) counter for auditsyslogmsgsent

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
auditsyslogmsggen	<Double>	Read-only	Syslog messages about to be sent to the syslog server.
auditsyslogmsggenrate	<Double>	Read-only	Rate (/s) counter for auditsyslogmsggen
auditsyslogmsgsenttcp	<Double>	Read-only	Syslog messages sent to the syslog server(s) over TCP.
auditsyslogmsgsenttcprate	<Double>	Read-only	Rate (/s) counter for auditsyslogmsgsenttcp
auditjsonobjcreated	<Double>	Read-only	Total number of JSON objects created for HTTP based syslog servers
auditjsonobjcreatedrate	<Double>	Read-only	Rate (/s) counter for auditjsonobjcreated
auditjsonbufexported	<Double>	Read-only	Total number of JSON buffers exported for HTTP based syslog servers
auditjsonbufexportedrate	<Double>	Read-only	Rate (/s) counter for auditjsonbufexported
auditjson2xxresp	<Double>	Read-only	Total number of 2xx responses received for HTTP based syslog servers
auditjson2xxresprate	<Double>	Read-only	Rate (/s) counter for auditjson2xxresp
auditjsonnon2xxresp	<Double>	Read-only	Total number of non 2xx responses

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			received for HTTP based syslog servers
auditjsonnon2xxresp rate	<Double>	Read-only	Rate (/s) counter for auditjsonnon2xxresp
auditsyslogmsgsente xternal	<Double>	Read-only	Syslog messages sent to external syslog server(s) over UDP.
auditsyslogmsgsente xternalrate	<Double>	Read-only	Rate (/s) counter for auditsyslogmsgsente xternal
auditnsballocfail	<Double>	Read-only	NAT allocation failed.
auditnsballocfailrate	<Double>	Read-only	Rate (/s) counter for auditnsballocfail
auditlog32errsyslogal locnsbfail	<Double>	Read-only	Nsb allocation failed.
auditlog32errsyslogal locnsbfailrate	<Double>	Read-only	Rate (/s) counter for auditlog32errsyslogal locnsbfail
auditmemallocfail	<Double>	Read-only	Failures in allocation of Access Gateway context structure. When an Access Gateway session is established, the Citrix ADC creates an internal context structure , which identifies the user and the IP address from which the user has logged in.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
auditmemallocfailrate	<Double>	Read-only	Rate (/s) counter for auditmemallocfail
auditportallocfail	<Double>	Read-only	Number of times the Citrix ADC failed to allocate a port when sending a syslog message to the syslog server(s).
auditportallocfailrate	<Double>	Read-only	Rate (/s) counter for auditportallocfail
auditcontextnotfound	<Double>	Read-only	Failures in finding the context structure for an Access Gateway session during attempts to send session-specific audit messages.

During an Access Gateway session, audit messages related to the session are queued up in the auditlog buffer for transmission to the audit log server(s). If the session is killed before the messages are sent, the context structure allocated at session creation is removed. This structure is needed for sending the queued auditlog messages. If it is not found, this counter is incremented.

Operations

authentication

Authentication

Authentication statistics.

NAME	DESCRIPTION
authenticationloginschemapolicy	
authenticationoauthidppolicy	Statistics for AAA OAuth IdentityProvider (IdP) policy resource.
authenticationpolicy	Statistics for Authentication Policy resource.
authenticationpolicylabel	Statistics for authentication policy label resource.
authenticationsamlidppolicy	Statistics for AAA Saml IdentityProvider (IdP) policy resource.
authenticationvserver	Statistics for authentication virtual server resource.

authenticationloginschemapolicy

Read/write properties

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	The name of the LoginSchema policy for which statistics will be displayed. If not given statistics are shown for all policies. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pipolicyhits	<Double>	Read-only	Number of hits on the policy
pipolicyhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyhits
pipolicyundefhits	<Double>	Read-only	Number of undef hits on the policy
pipolicyundefhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyundefhits

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/authenticationloginschemapolicy **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/authenticationloginschemapolicy? **args=name: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get authenticationloginschemapolicy resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/authenticationloginschemapolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "authenticationloginschemapolicy": [ {

"name":<String_value>,

"pipolicyundefhitsrate":<Double_value>,

"pipolicyhitsrate":<Double_value>,

"pipolicyundefhits":<Double_value>,

"pipolicyhits":<Double_value>

}]}
```

GET

authenticationvserver

Statistics for authentication virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the authentication virtual server. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes

autoscale

Autoscale

AutoScale statistics.

NAME	DESCRIPTION
autoscalepolicy	Statistics for Autoscale policy resource.

autoscalepolicy

Statistics for Autoscale policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	The name of the autoscale policy for which statistics will be displayed. If not given statistics are shown for all autoscale policies. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pipolicyhits	<Double>	Read-only	Number of hits on the policy
pipolicyhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyhits
pipolicyundefhits	<Double>	Read-only	Number of undef hits on the policy
pipolicyundefhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyundefhits

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

basic

Basic

Basic system statistics.

NAME	DESCRIPTION
service	Statistics for service resource.
servicegroup	Statistics for service group resource.
servicegroupmember	Statistics for service group entity resource.

service

Statistics for service resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the service. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
throughput	<Double>	Read-only	Number of bytes received or sent by this service (Mbps).
throughputrate	<Double>	Read-only	Rate (/s) counter for throughput
avgsvrttfb	<Double>	Read-only	Average TTFB between the Citrix ADC and the server. TTFB is the time interval between sending the request packet to a service and receiving the first response from the service
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicetype	<String>	Read-only	The service type of this service.Possible values are ADNS, DNS, MYSQL, RTSP, SSL_DIAMETER, ADNS_TCP, DNS_TCP, NNTP, SIP_UDP, SSL_TCP, ANY, FTP, RADIUS, SNMP, TCP, DHCPRA, HTTP, RDP, SSL, TFTP, DIAMETER, MSSQL, RPCSVR, SSL_BRIDGE, UDP
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
curclntconnections	<Double>	Read-only	Number of current client connections.
surgecount	<Double>	Read-only	Number of requests in the surge queue.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			behind the virtual server.
svrestablishedconn	<Double>	Read-only	Number of server connections in ESTABLISHED state.
curreusepool	<Double>	Read-only	Number of requests in the idle queue/ reuse pool.
maxclients	<Double>	Read-only	Maximum open connections allowed on this service.
curload	<Double>	Read-only	Load on the service that is calculated from the bound load based monitor.
totalconnreassembly queue75	<Double>	Read-only	Total no of connections with 75% TCP reassembly queue
totalconnreassembly queueflush	<Double>	Read-only	Total no of connections incurred TCP reassembly queue flush
httpmaxhdrszpkts	<Double>	Read-only	Number of http max header size packet parsing failures
httpmaxhdrfldlenpkts	<Double>	Read-only	Number of HTTP requests exceeding max header field length

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcpmaxooopkts	<Double>	Read-only	No of times max out of order packets reached
curtflags	<Double>	Read-only	Current flags on the service for internal use in display handlers.
totsvrttlbtransactions	<Double>	Read-only	Total transactions where server TTLB is calculated.
toleratingttlbtransactions	<Double>	Read-only	Tolerable transactions based on APDEX threshold (>T ;; <4T).
frustratingttlbtransactions	<Double>	Read-only	Frustrating transactions based on APDEX threshold (>4T).
vsvrservicehits	<Double>	Read-only	Number of times that the service has been provided.
vsvrservicehitsrate	<Double>	Read-only	Rate (/s) counter for vsvrservicehits
activetransactions	<Double>	Read-only	Number of active transactions handled by this service. (Including those in the surge queue.) Active Transaction means number of transactions currently served by the server including

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			those waiting in the SurgeQ
serviceorder	<Double>	Read-only	Order with which service is bound to vserver

servicegroupmember

Statistics for service group entity resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicegroupname	<String>	Read-write	Displays statistics for the specified service group.Name of the service group. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			colon (:), at sign (@), equal sign (=), and hyphen (-) characters. CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my servicegroup" or 'my servicegroup'). Minimum length = 1
ip	<String>	Read-write	IP address of the service group. Mutually exclusive with the server name parameter.
servername	<String>	Read-write	Name of the server. Mutually exclusive with the IP address parameter. Minimum length = 1
port	<Integer>	Read-write	Port number of the service group member. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
avgsvrttfb	<Double>	Read-only	Average TTFB between the Citrix ADC and the server. TTFB is the time interval between sending the request packet to a service and receiving the first response from the service
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = basic, full
botrequests	<Double>	Read-only	HTTP/HTTPS requests sent to your protected web servers via the Bot Management.
botrequestsrate	<Double>	Read-only	Rate (/s) counter for botrequests
botreqbytes	<Double>	Read-only	Number of bytes transfered for requests
botreqbytesrate	<Double>	Read-only	Rate (/s) counter for botreqbytes
botresponses	<Double>	Read-only	HTTP/HTTPS responses sent by your protected web servers via the Bot Management.
botresponsesrate	<Double>	Read-only	Rate (/s) counter for botresponses
botresbytes	<Double>	Read-only	Number of bytes transfered for responses
botresbytesrate	<Double>	Read-only	Rate (/s) counter for botresbytes
bottotallog	<Double>	Read-only	Total number of logs by the bot management.
botlograte	<Double>	Read-only	Rate (/s) counter for bottotallog

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
bottotaldrop	<Double>	Read-only	Total number of drops by the bot management.
botdroprate	<Double>	Read-only	Rate (/s) counter for bottotaldrop
bottotalredirect	<Double>	Read-only	Total number of redirects by the bot management.
botredirectrate	<Double>	Read-only	Rate (/s) counter for bottotalredirect
bottotalreset	<Double>	Read-only	Total number of resets by the bot management.
botresetrate	<Double>	Read-only	Rate (/s) counter for bottotalreset
botvioldevicefingerprint	<Double>	Read-only	Number of device fingerprint violations seen by the Bot Management.
botvioldevicefingerprintrate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprint
botvioldevicefingerprintlog	<Double>	Read-only	Number of device fingerprint violations logged by the Bot Management.
botvioldevicefingerprintlograte	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintlog
botvioldevicefingerprintdrop	<Double>	Read-only	Number of device fingerprint violations

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			dropped by the Bot Management.
botvioldevicefingerprintdroprate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintdrop
botvioldevicefingerprintredirect	<Double>	Read-only	Number of device fingerprint violations requests redirected by the Bot Management to a different Web page or web server.
botvioldevicefingerprintredirectrate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintredirect
botvioldevicefingerprintcaptcha	<Double>	Read-only	Number of device fingerprint violations requests for which CAPTCHA challenge was sent.
botvioldevicefingerprintcaptcharate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintcaptcha
botvioldevicefingerprintreset	<Double>	Read-only	Number of device fingerprint violations reset by the Bot Management.
botvioldevicefingerprintresetrate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintreset
botviolipreputation	<Double>	Read-only	Number of ip reputation violations

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			seen by the Bot Management.
botviolipreputationrate	<Double>	Read-only	Rate (/s) counter for botviolipreputation
botviolipreputationlog	<Double>	Read-only	Number of ip reputation violations logged by the Bot Management.
botviolipreputationlograte	<Double>	Read-only	Rate (/s) counter for botviolipreputationlog
botviolipreputationdrop	<Double>	Read-only	Number of ip reputation violations dropped by the Bot Management.
botviolipreputationdroprate	<Double>	Read-only	Rate (/s) counter for botviolipreputationdrop
botviolipreputationredirect	<Double>	Read-only	Number of ip reputation violations requests redirected by the Bot Management to a different Web page or web server.
botviolipreputationredirectrate	<Double>	Read-only	Rate (/s) counter for botviolipreputationredirect
botviolipreputationcaptcha	<Double>	Read-only	Number of ip reputation violations requests for which CAPTCHA challenge was sent.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botviolipreputationcaptcharate	<Double>	Read-only	Rate (/s) counter for botviolipreputationcaptcha
botviolipreputationreset	<Double>	Read-only	Number of ip reputation violations reset by the Bot Management.
botviolipreputationresetrate	<Double>	Read-only	Rate (/s) counter for botviolipreputationreset
botviolwhitelist	<Double>	Read-only	Number of white list violations seen by the Bot Management.
botviolwhitelistrate	<Double>	Read-only	Rate (/s) counter for botviolwhitelist
botviolwhitelistlog	<Double>	Read-only	Number of white list violations logged by the Bot Management.
botviolwhitelistlograte	<Double>	Read-only	Rate (/s) counter for botviolwhitelistlog
botviolblacklist	<Double>	Read-only	Number of black list violations seen by the Bot Management.
botviolblacklistrate	<Double>	Read-only	Rate (/s) counter for botviolblacklist
botviolblacklistlog	<Double>	Read-only	Number of black list violations logged by the Bot Management.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botviolblacklistlograte	<Double>	Read-only	Rate (/s) counter for botviolblacklistlog
botviolblacklistdrop	<Double>	Read-only	Number of black list violations dropped by the Bot Management.
botviolblacklistdroprate	<Double>	Read-only	Rate (/s) counter for botviolblacklistdrop
botviolblacklistreset	<Double>	Read-only	Number of black list violations reset by the Bot Management.
botviolblacklistresetrate	<Double>	Read-only	Rate (/s) counter for botviolblacklistreset
botviolblacklistredirect	<Double>	Read-only	Number of black list violations redirected by the Bot Management to a different Web page or web server.
botviolblacklistredirectrate	<Double>	Read-only	Rate (/s) counter for botviolblacklistredirect
botviolratelimit	<Double>	Read-only	Number of rate limiting violations seen by the Bot Management.
botviolratelimitrate	<Double>	Read-only	Rate (/s) counter for botviolratelimit
botviolratelimitlog	<Double>	Read-only	Number of rate limiting violations

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			logged by the Bot Management.
botviolratelimitlograte	<Double>	Read-only	Rate (/s) counter for botviolratelimitlog
botviolratelimitdrop	<Double>	Read-only	Number of rate limiting violations dropped by the Bot Management.
botviolratelimitdroprate	<Double>	Read-only	Rate (/s) counter for botviolratelimitdrop
botviolratelimitredirect	<Double>	Read-only	Number of rate limiting violations requests redirected by the Bot Management to a different Web page or web server.
botviolratelimitredirectrate	<Double>	Read-only	Rate (/s) counter for botviolratelimitredirect
botviolratelimitexceedresponse	<Double>	Read-only	Number of rate limiting violations requests resulted in too many requests response by the Bot Management.
botviolratelimitexceedresponserate	<Double>	Read-only	Rate (/s) counter for botviolratelimitexceedresponse
botviolratelimitreset	<Double>	Read-only	Number of rate limiting violations reset by the Bot Management.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botviolratelimitresetrate	<Double>	Read-only	Rate (/s) counter for botviolratelimitreset
botviolstaticsignature	<Double>	Read-only	Number of static signature violations seen by the Bot Management.
botviolstaticsignature rate	<Double>	Read-only	Rate (/s) counter for botviolstaticsignature
botviolstaticsignature log	<Double>	Read-only	Number of static signature violations logged by the Bot Management.
botviolstaticsignature lograte	<Double>	Read-only	Rate (/s) counter for botviolstaticsignature log
botviolstaticsignature drop	<Double>	Read-only	Number of static signature violations dropped by the Bot Management.
botviolstaticsignature droprate	<Double>	Read-only	Rate (/s) counter for botviolstaticsignature drop
botviolstaticsignature redirect	<Double>	Read-only	Number of static signature violations requests redirected by the Bot Management to a different Web page or web server.
botviolstaticsignature redirectrate	<Double>	Read-only	Rate (/s) counter for botviolstaticsignature redirect

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botviolstaticsignature reset	<Double>	Read-only	Number of static signature violations requests reset by the Bot Management to a different Web page or web server.
botviolstaticsignature resetrate	<Double>	Read-only	Rate (/s) counter for botviolstaticsignature reset
botvioltps	<Double>	Read-only	Number of tps violations seen by the Bot Management.
botvioltpsrate	<Double>	Read-only	Rate (/s) counter for botvioltps
botvioltpslog	<Double>	Read-only	Number of tps violations logged by the Bot Management.
botvioltpslograte	<Double>	Read-only	Rate (/s) counter for botvioltpslog
botvioltpsdrop	<Double>	Read-only	Number of tps violations dropped by the Bot Management.
botvioltpsdroprate	<Double>	Read-only	Rate (/s) counter for botvioltpsdrop
botvioltpsredirect	<Double>	Read-only	Number of tps violations requests redirected by the Bot Management to a different Web page or web server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botvioltpsredirectrate	<Double>	Read-only	Rate (/s) counter for botvioltpsredirect
botvioltpsreset	<Double>	Read-only	Number of tps violations reset by the Bot Management.
botvioltpsresetrate	<Double>	Read-only	Rate (/s) counter for botvioltpsreset
botvioltpscaptcha	<Double>	Read-only	Number of TPS violations requests for which CAPTCHA challenge was sent.
botvioltpscaptcharate	<Double>	Read-only	Rate (/s) counter for botvioltpscaptcha
botviolcaptcha	<Double>	Read-only	Number of Captcha challenge failures seen by the Bot Management.
botviolcaptcharate	<Double>	Read-only	Rate (/s) counter for botviolcaptcha
botviolcaptchalog	<Double>	Read-only	Number of Captcha challenge failures logged by the Bot Management.
botviolcaptchalograte	<Double>	Read-only	Rate (/s) counter for botviolcaptchalog
botviolcaptchadrop	<Double>	Read-only	Number of Captcha challenge failures dropped by the Bot Management.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botviolcaptchadroprate	<Double>	Read-only	Rate (/s) counter for botviolcaptchadrop
botviolcaptcharedirect	<Double>	Read-only	Number of Captcha challenge failures redirected by the Bot Management.
botviolcaptcharedirectrate	<Double>	Read-only	Rate (/s) counter for botviolcaptcharedirect
botviolcaptchareset	<Double>	Read-only	Number of Captcha challenge failures reset by the Bot Management.
botviolcaptcharesetrate	<Double>	Read-only	Rate (/s) counter for botviolcaptchareset
botvioltrap	<Double>	Read-only	Number of trap violations seen by the Bot Management.
botvioltraprate	<Double>	Read-only	Rate (/s) counter for botvioltrap
botvioltraplog	<Double>	Read-only	Number of trap violations logged by the Bot Management.
botvioltraplograte	<Double>	Read-only	Rate (/s) counter for botvioltraplog
botvioltrapdrop	<Double>	Read-only	Number of trap violations dropped by the Bot Management.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botvioltrapdroprate	<Double>	Read-only	Rate (/s) counter for botvioltrapdrop
botvioltrapredirect	<Double>	Read-only	Number of trap violations requests redirected by the Bot Management to a different Web page or web server.
botvioltrapredirectrate	<Double>	Read-only	Rate (/s) counter for botvioltrapredirect
botvioltrapreset	<Double>	Read-only	Number of trap violations reset by the Bot Management.
botvioltrapresetrate	<Double>	Read-only	Rate (/s) counter for botvioltrapreset
botcfgwhitelist	<Double>	Read-only	Profiles with Whitelist enabled.
botcfgblacklist	<Double>	Read-only	Profiles with Blacklist enabled.
botcfgiprep	<Double>	Read-only	Profiles with IP Reputation enabled.
botcfgratelimit	<Double>	Read-only	Profiles with Ratelimit enabled.
botcfgsignature	<Double>	Read-only	Profiles with Static Signatures enabled.
botcfgdfp	<Double>	Read-only	Profiles with Device Fingerprint enabled.
botcfgtps	<Double>	Read-only	Profiles with TPS enabled.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botcfgtrap	<Double>	Read-only	Profiles with Bot Trap enabled.
botcfgkmdetection	<Double>	Read-only	Profiles with Keyboard mouse detection enabled.

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/bot **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/bot? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get bot resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/bot? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

botprofile

Statistics for Bot profile resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the bot profile.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1 Maximum length = 31
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
botrequestsperprofile	<Double>	Read-only	HTTP/HTTPS requests sent to your protected web servers via the Bot profile.
botrequestsperprofile rate	<Double>	Read-only	Rate (/s) counter for botrequestsperprofile
botreqbytesperprofile	<Double>	Read-only	Number of bytes transfered for requests
botreqbytesperprofile rate	<Double>	Read-only	Rate (/s) counter for botreqbytesperprofile
botresponsesperprofi le	<Double>	Read-only	HTTP/HTTPS responses sent by your protected web servers via the Bot profile.
botresponsesperprofi lerate	<Double>	Read-only	Rate (/s) counter for botresponsesperprofi le
botresbytesperprofile	<Double>	Read-only	Number of bytes transfered for responses

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botresbytesperprofilerate	<Double>	Read-only	Rate (/s) counter for botresbytesperprofile
bottotallogprofile	<Double>	Read-only	Total number of logs by the Bot profile.
botlogprofilerate	<Double>	Read-only	Rate (/s) counter for bottotallogprofile
bottotaldropprofile	<Double>	Read-only	Total number of drops by the Bot profile.
botdropprofilerate	<Double>	Read-only	Rate (/s) counter for bottotaldropprofile
bottotalredirectprofile	<Double>	Read-only	Total number of redirects by the Bot profile.
botredirectprofilerate	<Double>	Read-only	Rate (/s) counter for bottotalredirectprofile
bottotalresetprofile	<Double>	Read-only	Total number of resets by the Bot profile.
botresetprofilerate	<Double>	Read-only	Rate (/s) counter for bottotalresetprofile
botvioldevicefingerprintprofile	<Double>	Read-only	Number of device fingerprint violations seen by the Bot profile.
botvioldevicefingerprintprofilerate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintprofile
botvioldevicefingerprintlogprofile	<Double>	Read-only	Number of device fingerprint violations

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			logged by the Bot profile.
botvioldevicefingerprintlogprofilerate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintlogprofile
botvioldevicefingerprintdropprofile	<Double>	Read-only	Number of device fingerprint violations dropped by the Bot profile.
botvioldevicefingerprintdropprofilerate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintdropprofile
botvioldevicefingerprintredirectprofile	<Double>	Read-only	Number of device fingerprint violations requests redirected by the Bot profile to a different Web page or web server.
botvioldevicefingerprintredirectprofilerate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintredirectprofile
botvioldevicefingerprintcaptchaprofile	<Double>	Read-only	Number of device fingerprint violation requests for which CAPTCHA challenge was sent due to Bot profile.
botvioldevicefingerprintcaptchaprofilerate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintcaptchaprofile
botvioldevicefingerprintresetprofile	<Double>	Read-only	Number of device fingerprint violations

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			reset by the Bot profile.
botvioldevicefingerprintresetprofilerate	<Double>	Read-only	Rate (/s) counter for botvioldevicefingerprintresetprofile
botviolipreputationprofile	<Double>	Read-only	Number of ip reputation violations seen by the Bot profile.
botviolipreputationprofilerate	<Double>	Read-only	Rate (/s) counter for botviolipreputationprofile
botviolipreputationlogprofile	<Double>	Read-only	Number of ip reputation violations logged by the Bot Profile.
botviolipreputationlogprofilerate	<Double>	Read-only	Rate (/s) counter for botviolipreputationlogprofile
botviolipreputationdropprofile	<Double>	Read-only	Number of ip reputation violations dropped by the Bot profile.
botviolipreputationdropprofilerate	<Double>	Read-only	Rate (/s) counter for botviolipreputationdropprofile
botviolipreputationredirectprofile	<Double>	Read-only	Number of ip reputation violations requests redirected by the Bot profile to a different Web page or web server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botviolipreputationredirectprofilerate	<Double>	Read-only	Rate (/s) counter for botviolipreputationredirectprofile
botviolipreputationcaptchaprofile	<Double>	Read-only	Number of ip reputation violation requests for which CAPTCHA challenge was sent due to Bot profile.
botviolipreputationcaptchaprofilerate	<Double>	Read-only	Rate (/s) counter for botviolipreputationcaptchaprofile
botviolipreputationresetprofile	<Double>	Read-only	Number of ip reputation violations reset by the Bot profile.
botviolipreputationresetprofilerate	<Double>	Read-only	Rate (/s) counter for botviolipreputationresetprofile
botviolwhitelistprofile	<Double>	Read-only	Number of white list violations seen by the Bot profile.
botviolwhitelistprofilerate	<Double>	Read-only	Rate (/s) counter for botviolwhitelistprofile
botviolwhitelistlogprofile	<Double>	Read-only	Number of white list violations logged by the Bot profile.
botviolwhitelistlogprofilerate	<Double>	Read-only	Rate (/s) counter for botviolwhitelistlogprofile

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botviolblacklistprofile	<Double>	Read-only	Number of black list violations seen by the Bot profile.
botviolblacklistprofile rate	<Double>	Read-only	Rate (/s) counter for botviolblacklistprofile
botviolblacklistlogpro file	<Double>	Read-only	Number of black list violations logged by the Bot profile.
botviolblacklistlogpro filerate	<Double>	Read-only	Rate (/s) counter for botviolblacklistlogpro file
botviolblacklistdroppr ofile	<Double>	Read-only	Number of black list violations dropped by the Bot profile.
botviolblacklistdroppr ofilerate	<Double>	Read-only	Rate (/s) counter for botviolblacklistdroppr ofile
botviolblacklistresetp rofile	<Double>	Read-only	Number of black list violations reset by the Bot profile.
botviolblacklistresetp rofilerate	<Double>	Read-only	Rate (/s) counter for botviolblacklistresetp rofile
botviolblacklistredire ctprofile	<Double>	Read-only	Number of black list violations redirected by the Bot profile to a different Web page or web server.
botviolblacklistredire ctprofilerate	<Double>	Read-only	Rate (/s) counter for botviolblacklistredire ctprofile

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botviolratelimitprofile	<Double>	Read-only	Number of rate limiting violations seen by the Bot profile.
botviolratelimitprofilerate	<Double>	Read-only	Rate (/s) counter for botviolratelimitprofile
botviolratelimitlogprofile	<Double>	Read-only	Number of rate limiting violations logged by the Bot profile.
botviolratelimitlogprofilerate	<Double>	Read-only	Rate (/s) counter for botviolratelimitlogprofile
botviolratelimitdropprofile	<Double>	Read-only	Number of rate limiting violations dropped by the Bot profile.
botviolratelimitdropprofilerate	<Double>	Read-only	Rate (/s) counter for botviolratelimitdropprofile
botviolratelimitredirectprofile	<Double>	Read-only	Number of rate limiting violations requests redirected by the Bot profile to a different Web page or web server.
botviolratelimitredirectprofilerate	<Double>	Read-only	Rate (/s) counter for botviolratelimitredirectprofile
botviolratelimitexceedresponseprofile	<Double>	Read-only	Number of rate limiting violations requests responded resulted in too many

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			requests response by the Bot profile.
botviolratelimitexceedresponseprofilerate	<Double>	Read-only	Rate (/s) counter for botviolratelimitexceedresponseprofile
botviolratelimitresetprofile	<Double>	Read-only	Number of rate limiting violations reset by the Bot profile.
botviolratelimitresetprofilerate	<Double>	Read-only	Rate (/s) counter for botviolratelimitresetprofile
botviolstaticsignature profile	<Double>	Read-only	Number of static signatutre violations seen by the Bot profile.
botviolstaticsignature profilerate	<Double>	Read-only	Rate (/s) counter for botviolstaticsignature profile
botviolstaticsignature logprofile	<Double>	Read-only	Number of static signatutre violations logged by the Bot profile.
botviolstaticsignature logprofilerate	<Double>	Read-only	Rate (/s) counter for botviolstaticsignature logprofile
botviolstaticsignature dropprofile	<Double>	Read-only	Number of static signatutre violations dropped by the Bot profile.
botviolstaticsignature dropprofilerate	<Double>	Read-only	Rate (/s) counter for botviolstaticsignature dropprofile

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botviolstaticsignature redirectprofile	<Double>	Read-only	Number of static signatutre violations redirected by the Bot profile to a different Web page or web server.
botviolstaticsignature redirectprofilerate	<Double>	Read-only	Rate (/s) counter for botviolstaticsignature redirectprofile
botviolstaticsignature resetprofile	<Double>	Read-only	Number of static signatutre violations reset by the Bot profile to a different Web page or web server.
botviolstaticsignature resetprofilerate	<Double>	Read-only	Rate (/s) counter for botviolstaticsignature resetprofile
botvioltpsprofile	<Double>	Read-only	Number of tps violations seen by the Bot profile.
botvioltpsprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltpsprofile
botvioltpslogprofile	<Double>	Read-only	Number of tps violations logged by the Bot profile.
botvioltpslogprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltpslogprofile
botvioltpsdropprofile	<Double>	Read-only	Number of tps violations dropped by the Bot profile.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botvioltpsdropprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltpsdropprofile
botvioltpsredirectprofile	<Double>	Read-only	Number of tps violations requests redirected by the Bot profile to a different Web page or web server.
botvioltpsredirectprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltpsredirectprofile
botvioltpsresetprofile	<Double>	Read-only	Number of tps violations reset by the Bot profile.
botvioltpsresetprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltpsresetprofile
botvioltpscaptchaprofile	<Double>	Read-only	Number of tps violation requests for which CAPTCHA challenge was sent due to Bot profile.
botvioltpscaptchaprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltpscaptchaprofile
botviolcaptchaprofile	<Double>	Read-only	Number of Captcha challenge failures seen by the Bot profile.
botviolcaptchaprofilerate	<Double>	Read-only	Rate (/s) counter for botviolcaptchaprofile
botviolcaptchalogprofile	<Double>	Read-only	Number of Captcha challenge failures

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			logged by the Bot profile.
botviolcaptchalogprofilerate	<Double>	Read-only	Rate (/s) counter for botviolcaptchalogprofile
botviolcaptchadropprofile	<Double>	Read-only	Number of Captcha challenge failures dropped by the Bot profile.
botviolcaptchadropprofilerate	<Double>	Read-only	Rate (/s) counter for botviolcaptchadropprofile
botviolcaptcharedirectprofile	<Double>	Read-only	Number of Captcha challenge failures redirected by the Bot profile.
botviolcaptcharedirectprofilerate	<Double>	Read-only	Rate (/s) counter for botviolcaptcharedirectprofile
botviolcaptcharesetprofile	<Double>	Read-only	Number of Captcha challenge failures reset by the Bot profile.
botviolcaptcharesetprofilerate	<Double>	Read-only	Rate (/s) counter for botviolcaptcharesetprofile
botvioltrapprofile	<Double>	Read-only	Number of trap violations seen by the Bot profile.
botvioltrapprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltrapprofile

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botvioltraplogprofile	<Double>	Read-only	Number of trap violations logged by the Bot profile.
botvioltraplogprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltraplogprofile
botvioltrapdropprofile	<Double>	Read-only	Number of trap violations dropped by the Bot profile.
botvioltrapdropprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltrapdropprofile
botvioltrapredirectprofile	<Double>	Read-only	Number of trap violations requests redirected by the Bot profile to a different Web page or web server.
botvioltrapredirectprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltrapredirectprofile
botvioltrapresetprofile	<Double>	Read-only	Number of trap violations reset by the Bot profile.
botvioltrapresetprofilerate	<Double>	Read-only	Rate (/s) counter for botvioltrapresetprofile
botcfgwhitelistprofile	<Double>	Read-only	Whitelist enabled under bot profile.
botcfgblacklistprofile	<Double>	Read-only	Blacklist enabled under bot profile.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
botcfgiprepprofile	<Double>	Read-only	IP Reputation enabled under bot profile.
botcfgratelimitprofile	<Double>	Read-only	Ratelimit enabled under bot profile.
botcfgsignatureprofile	<Double>	Read-only	Static Signatures enabled under bot profile.
botcfgdfpprofile	<Double>	Read-only	Device Fingerprint enabled under bot profile.
botcfgtpsprofile	<Double>	Read-only	TPS enabled under bot profile.
botcfgtrapprofile	<Double>	Read-only	Bot Trap enabled under bot profile.
botcfgkmdetectionprofile	<Double>	Read-only	Keyboard mouse detection enabled under bot profile.

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/botprofile **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/botprofile? **args=name: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get botprofile resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/botprofile? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

cache

Integrated Caching

Integrated Caching statistics. The Integrated Caching feature is used to cache static and dynamic web application data.

NAME	DESCRIPTION
cache	Statistics for cache.
cachecontentgroup	Statistics for Integrated Cache content group resource.
cachepolicy	Statistics for Integrated Cache policy resource.

NAME	DESCRIPTION
cachepolicylabel	Statistics for cache policy label resource.

cache

Statistics for cache.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
cachemaxmemorykb	<Double>	Read-only	Largest amount of memory the Citrix ADC can dedicate to caching, up to 50% of available memory. A 0 value disables caching, but the caching module continues to run.
cacherecentpercentsuccessfulrevalidation	<Double>	Read-only	Recently recorded percentage of times stored content was successfully revalidated by a 304 response rather than by a full response
cacherecentpercentstoreablemiss	<Double>	Read-only	Recently recorded ratio of store-able misses to all misses expressed as percentage.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cacherecentpercentparameterizedhits	<Double>	Read-only	Recently recorded ratio of parameterized 304 hits to all parameterized hits expressed as a percentage
cacherecentpercentoriginbandwidthsaved	<Double>	Read-only	Bytes served from cache divided by total bytes served to client. This ratio can be greater than 1 because of the assumption that all compression has been done in the Citrix ADC.
cacherecentpercenthit	<Double>	Read-only	Recently recorded cache hit ratio expressed as percentage
cacherecentpercentbytehit	<Double>	Read-only	Recently recorded cache byte hit ratio expressed as percentage. Here we define byte hit ratio as ((number of bytes served from the cache)/(total number of bytes served to the client)). This is the standard definition of Byte Hit Ratio. If compression is turned ON in NS then this ratio doesn't mean much. This might under or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			over estimate the origin-to-cache bandwidth saving (depending upon whether bytes served by CMP in Citrix ADC are more or less than compressed bytes served from the cache). If CMP is turned OFF in NS then this ratio is same as cacheRecentPercentOriginBandwidthSaved.
cacherecentpercent304hits	<Double>	Read-only	Recently recorded ratio of 304 hits to all hits expressed as percentage
cacheutilizedmemorykb	<Double>	Read-only	Amount of memory the integrated cache is currently using.
cachemaxmemoryactivekb	<Double>	Read-only	Currently active value of maximum memory
cache64maxmemorykb	<Double>	Read-only	Largest amount of memory the Citrix ADC can dedicate to caching, up to 50% of available memory. A 0 value disables caching, but the caching module continues to run.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachepercentpethits	<Double>	Read-only	Percentage of cache hits in content groups that have Poll Every Time enabled, relative to all searches of content groups with Poll Every Time enabled.
cachetotpethits	<Double>	Read-only	Number of times a cache hit was found during a search of a content group that has Poll Every Time enabled.
cachepethitsrate	<Double>	Read-only	Rate (/s) counter for cachetotpethits
cachepercentparameterized304hits	<Double>	Read-only	Percentage of parameterized 304 hits relative to all parameterized hits.
cachetotparameterizedhits	<Double>	Read-only	Parameterized requests resulting in either a 304 or non-304 hit.
cacheparameterizedhitsrate	<Double>	Read-only	Rate (/s) counter for cachetotparameterizedhits
cachepercentsuccessfulrevalidation	<Double>	Read-only	Percentage of times stored content was successfully revalidated by a 304 (Object Not Modifed) response rather than by a full response

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachepercentstoreablemiss	<Double>	Read-only	Responses that were fetched from the origin, stored in the cache, and then served to the client, as a percentage of all cache misses.
cachetotfulltoconditionalrequest	<Double>	Read-only	Number of user-agent requests for a cached Poll Every Time (PET) response that were sent to the origin server as conditional requests.
cachefulltoconditionalrequestrate	<Double>	Read-only	Rate (/s) counter for cachetotfulltoconditionalrequest
cachetotsuccessfulrevalidation	<Double>	Read-only	Total number of times stored content was successfully revalidated by a 304 Not Modified response from the origin.
cachesuccessfulrevalidationrate	<Double>	Read-only	Rate (/s) counter for cachetotsuccessfulrevalidation
cachetotrevalidationmiss	<Double>	Read-only	Responses that an intervening cache revalidated with the integrated cache before serving, as determined by a Cache-Control: Max-Age header

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			configurable in the integrated cache
cacherevalidationmissrate	<Double>	Read-only	Rate (/s) counter for cachetotrevalidation miss
cachetotnonstoreablemisses	<Double>	Read-only	Cache misses for which the fetched response is not stored in the cache. These responses match policies with a NOCACHE action or are affected by Poll Every Time.
cachenonstoreablemissesrate	<Double>	Read-only	Rate (/s) counter for cachetotnonstoreablemisses
cachetotstoreablemisses	<Double>	Read-only	Cache misses for which the fetched response is stored in the cache before serving it to the client. Storable misses conform to a built-in or user-defined caching policy that contains a CACHE action.
cachestoreablemissesrate	<Double>	Read-only	Rate (/s) counter for cachetotstoreablemisses
cachecompressedbytesserved	<Double>	Read-only	Number of compressed bytes served from the cache

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachecompressedbytesservedrate	<Double>	Read-only	Rate (/s) counter for cachecompressedbytesserved
cachepercentbytehit	<Double>	Read-only	Bytes served from the cache divided by total bytes served to the client. If compression is On in the Citrix ADC, this ratio may not reflect the bytes served by the compression module. If the compression is Off, this ratio is the same as cachePercentOriginBandwidthSaved.
cachebytesserved	<Double>	Read-only	Total number of bytes served from the integrated cache
cachebytesservedrate	<Double>	Read-only	Rate (/s) counter for cachebytesserved
cachetotresponsebytes	<Double>	Read-only	Total number of HTTP response bytes served by Citrix ADC from both the origin and the cache
cacheresponsebytesrate	<Double>	Read-only	Rate (/s) counter for cachetotresponsebytes
cachepercent304hits	<Double>	Read-only	304 responses as a percentage of all

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			responses that the Citrix ADC served.
cachenummarker	<Double>	Read-only	Marker objects created when a response exceeds the maximum or minimum size for entries in its content group or has not yet received the minimum number of hits required for items in its content group.
cachepercentoriginbandwidthsaved	<Double>	Read-only	Percentage of origin bandwidth saved, expressed as number of bytes served from the integrated cache divided by all bytes served. The assumption is that all compression is done in the Citrix ADC.
cachepercenthit	<Double>	Read-only	Cache hits as percentage of the total number of requests
cachetotmisses	<Double>	Read-only	Intercepted HTTP requests requiring fetches from origin server.
cachemissesrate	<Double>	Read-only	Rate (/s) counter for cachetotmisses

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachetothits	<Double>	Read-only	Responses served from the integrated cache. These responses match a policy with a CACHE action.
cachehitsrate	<Double>	Read-only	Rate (/s) counter for cachetothits
cachetotrequests	<Double>	Read-only	Total cache hits plus total cache misses.
cacherequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotrequests
cachenumcached	<Double>	Read-only	Responses currently in integrated cache. Includes responses fully downloaded, in the process of being downloaded, and expired or flushed but not yet removed.
cachecurhits	<Double>	Read-only	This number should be close to the number of hits being served currently.
cachecurmisses	<Double>	Read-only	Responses fetched from the origin and served from the cache. Should approximate storable misses. Does not include non-storable misses.
cachetotnon304hits	<Double>	Read-only	Total number of full (non-304) responses

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			served from the cache. A 304 status code indicates that a response has not been modified since the last time it was served
cachenon304hitsrate	<Double>	Read-only	Rate (/s) counter for cachetotnon304hits
cachetot304hits	<Double>	Read-only	Object not modified responses served from the cache. (Status code 304 served instead of the full response.)
cache304hitsrate	<Double>	Read-only	Rate (/s) counter for cachetot304hits
cachetotsqlhits	<Double>	Read-only	sql response served from cache
cachesqlhitsrate	<Double>	Read-only	Rate (/s) counter for cachetotsqlhits
cachetotexpireatlastbyte	<Double>	Read-only	Instances of content expiring immediately after receiving the last body byte due to the Expire at Last Byte setting for the content group.
cacheexpireatlastbyterate	<Double>	Read-only	Rate (/s) counter for cachetotexpireatlastbyte
cachetotflashcachemisses	<Double>	Read-only	Number of requests to a content group with flash cache

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			enabled that were cache misses. Flash cache distributes the response to all the clients in aqueue.
cacheflashcachemissesrate	<Double>	Read-only	Rate (/s) counter for cachetotflashcachemisses
cachetotflashcachehits	<Double>	Read-only	Number of requests to a content group with flash cache enabled that were cache hits. The flash cache setting queues requests that arrive simultaneously and distributes the response to all the clients in the queue.
cacheflashcachehitsrate	<Double>	Read-only	Rate (/s) counter for cachetotflashcachehits
cachetotparameterizedinvalidationrequests	<Double>	Read-only	Requests matching a policy with an invalidation (INVAL) action and a content group that uses an invalidation selector or parameters.
cacheparameterizedinvalidationrequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotparameterizedinvalidationrequests

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachetotnonparameterizedinvalidationrequests	<Double>	Read-only	Requests that match an invalidation policy where the invalGroups parameter is configured and expires one or more content groups.
cachenonparameterizedinvalidationrequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotnonparameterizedinvalidationrequests
cachetotinvalidationrequests	<Double>	Read-only	Requests that match an invalidation policy and result in expiration of specific cached responses or entire content groups.
cacheinvalidationrequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotinvalidationrequests
cachetotparameterizedrequests	<Double>	Read-only	Total number of requests where the content group has hit and invalidation parameters or selectors.
cacheparameterizedrequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotparameterizedrequests
cachetotparameterizednon304hits	<Double>	Read-only	Parameterized requests resulting in a full response (not status code 304:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Object Not Updated) served from the cache.
cacheparameterized non304hitsrate	<Double>	Read-only	Rate (/s) counter for cachetotparameterized non304hits
cachetotparameterized304hits	<Double>	Read-only	Parameterized requests resulting in an object not modified (status code 304) response.
cacheparameterized 304hitsrate	<Double>	Read-only	Rate (/s) counter for cachetotparameterized304hits
cachetotpetrequests	<Double>	Read-only	Requests that triggered a search of a content group that has Poll Every Time (PET) enabled (always consult the origin server before serving cached data).
cachepetrequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotpetrequests
cacheerrmemalloc	<Double>	Read-only	Total number of times the cache failed to allocate memory to store responses.
cachelargestresponsereceived	<Double>	Read-only	Size, in bytes, of largest response sent to client from

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the cache or the origin server.

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/cache **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/cache? **args=detail: <Boolean_value> ,fullvalues:**

<Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>

Use this query-parameter to get cache resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/cache? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "cachepolicylabel": [ {

"labelname":<String_value>,

"pipolicylabelhitsrate":<Double_value>,

"pipolicylabelhits":<Double_value>

}]}
```

cloud

Cloud

Citrix ADC as SD proxy statistics and cloud discovery commands.

NAME	DESCRIPTION
cloud	Statistics for cloud.

cloud

Statistics for cloud.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
ngsshieldle1secclxmtpconnesttime	<Double>	Read-only	Total Connection with CLXMTP connect time less than 1 sec

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsshieldle1secclxmtpconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsshieldle1secclxmtpconnesttime
ngsshieldle2secclxmtpconnesttime	<Double>	Read-only	Total Connection with CLXMTP connect time less than 2 sec
ngsshieldle2secclxmtpconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsshieldle2secclxmtpconnesttime
ngsshieldle3secclxmtpconnesttime	<Double>	Read-only	Total Connection with CLXMTP connect time less than 3 sec
ngsshieldle3secclxmtpconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsshieldle3secclxmtpconnesttime
ngsshieldle5secclxmtpconnesttime	<Double>	Read-only	Total Connection with CLXMTP connect time less than 5 sec
ngsshieldle5secclxmtpconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsshieldle5secclxmtpconnesttime
ngsshieldle8secclxmtpconnesttime	<Double>	Read-only	Total Connection with CLXMPT connect time less than 8 sec
ngsshieldle8secclxmtpconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsshieldle8secclxmtpconnesttime

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsshieldle13secclx mtpconnesttime	<Double>	Read-only	Total Connection with CLXMPT connect time less than 13 sec
ngsshieldle13secclx mtpconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsshieldle13secclx mtpconnesttime
ngsshieldle21secclx mtpconnesttime	<Double>	Read-only	Total Connection with CLXMPT connect time less than 21 sec
ngsshieldle21secclx mtpconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsshieldle21secclx mtpconnesttime
ngsshieldgt21secclx mtpconnesttime	<Double>	Read-only	Total Connection with CLXMPT connect time greater than 21 sec
ngsshieldgt21secclx mtpconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsshieldgt21secclx mtpconnesttime
ngsgctle1secconnest time	<Double>	Read-only	Total Connection with GCT connect time less than 1 sec
ngsgctle1secconnest timerate	<Double>	Read-only	Rate (/s) counter for ngsgctle1secconnest time
ngsgctle2secconnest time	<Double>	Read-only	Total Connection with GCT connect time less than 2 sec

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsgctle2secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsgctle2secconnesttime
ngsgctle3secconnesttime	<Double>	Read-only	Total Connection with GCT connect time less than 3 sec
ngsgctle3secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsgctle3secconnesttime
ngsgctle5secconnesttime	<Double>	Read-only	Total Connection with GCT connect time less than 5 sec
ngsgctle5secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsgctle5secconnesttime
ngsgctle8secconnesttime	<Double>	Read-only	Total Connection with GCT connect time less than 8 sec
ngsgctle8secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsgctle8secconnesttime
ngsgctgt8secconnesttime	<Double>	Read-only	Total Connection with GCT connect time greater than 8 sec
ngsgctgt8secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsgctgt8secconnesttime
ngsshieldclxmtpconnestattempted	<Double>	Read-only	Total attempted CLXMTP connection

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsshieldclxmtpconnestattemptedrate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpconnestattempted
ngsshieldclxmtpconnestsuccess	<Double>	Read-only	Total successful CLXMTP connection
ngsshieldclxmtpconnestsuccessrate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpconnestsuccess
ngsshieldclxmtpsoftdeny	<Double>	Read-only	Total number of softdeny received by SN
ngsshieldclxmtpsoftdenyrate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpsoftdeny
ngsshieldclxmtpdeny	<Double>	Read-only	Total number of deny received by SN
ngsshieldclxmtpdenyrate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpdeny
ngsshieldclxmtpallowtarget	<Double>	Read-only	Total number of allowtarget received by SN
ngsshieldclxmtpallowtargetrate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpallowtarget
ngsshieldclxmtpredirecttarget	<Double>	Read-only	Total number of redirecttarget received by SN
ngsshieldclxmtpredirecttargetrate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpredirecttarget

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsshieldclxmtpconnectorfanouttimeout	<Double>	Read-only	Total number of fanout timeout
ngsshieldclxmtpconnectorfanouttimeoutrate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpconnectorfanouttimeout
ngsshieldclxmtpglobalfanouttimeout	<Double>	Read-only	Total number of global fanout timeout
ngsshieldclxmtpglobalfanouttimeoutrate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpglobalfanouttimeout
ngsshieldfanout	<Double>	Read-only	Total number of fanout
ngsshieldfanoutrate	<Double>	Read-only	Rate (/s) counter for ngsshieldfanout
ngsshieldclvalidationfailure	<Double>	Read-only	Total Connection lease validation failure
ngsshieldclvalidationfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldclvalidationfailure
ngsshieldcldecryptionfailure	<Double>	Read-only	Total Connection lease decryption failure
ngsshieldcldecryptionfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldcldecryptionfailure
ngsshieldclxmtpcomplete	<Double>	Read-only	Total CLXMTP completed

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsshieldclxmtpcompleterate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpcomplete
ngsshieldclxmtptrustestfailure	<Double>	Read-only	Total CLXMTP trust establishment failure
ngsshieldclxmtptrustestfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtptrustestfailure
ngsshieldclxmtppubkeyvalfailure	<Double>	Read-only	Total CLXMTP pub key validation failure
ngsshieldclxmtppubkeyvalfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtppubkeyvalfailure
ngsshieldclxmtpconnvalidationfailure	<Double>	Read-only	Total CLXMTP connection lease validation failure
ngsshieldclxmtpconnvalidationfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpconnvalidationfailure
ngsshieldclxmtpauthorizeconnreqfailure	<Double>	Read-only	Total CLXMTP authorize connection request failure
ngsshieldclxmtpauthorizeconnreqfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldclxmtpauthorizeconnreqfailure
ngsshieldkeyfetchfailure	<Double>	Read-only	Total Shield key fetching failure
ngsshieldkeyfetchfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldkeyfetchfailure

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsshielddemandedrtkeynotfound	<Double>	Read-only	Total root of trust keys not found failure
ngsshielddemandedrtkeynotfoundrate	<Double>	Read-only	Rate (/s) counter for ngsshielddemandedrtkeynotfound
ngsshielddemandedcliskeynotfound	<Double>	Read-only	Total CLIS keys not found failure
ngsshielddemandedcliskeynotfoundrate	<Double>	Read-only	Rate (/s) counter for ngsshielddemandedcliskeynotfound
ngsshielddemandedgwkeynotfound	<Double>	Read-only	Total gateway keys not found failure
ngsshielddemandedgwkeynotfoundrate	<Double>	Read-only	Rate (/s) counter for ngsshielddemandedgwkeynotfound
ngsshieldkeycacheempty	<Double>	Read-only	Total shield key cache list empty
ngsshieldkeycacheemptyrate	<Double>	Read-only	Rate (/s) counter for ngsshieldkeycacheempty
ngsshieldakvgetsecretlistfailure	<Double>	Read-only	Total failures to get akv secret list
ngsshieldakvgetsecretlistfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldakvgetsecretlistfailure
ngsshieldakvgetsecretfailure	<Double>	Read-only	Total failures to get akv secrets

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsshieldakvgetsecretfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldakvgetsecretfailure
ngsshieldakvtokenfailure	<Double>	Read-only	Total akv token failures
ngsshieldakvtokenfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldakvtokenfailure
ngsshieldawssmgetmastersecretfailure	<Double>	Read-only	Total failures to get aws master secret list
ngsshieldawssmgetmastersecretfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldawssmgetmastersecretfailure
ngsshieldawssmgetsecretfailure	<Double>	Read-only	Total failures to get aws secrets
ngsshieldawssmgetsecretfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldawssmgetsecretfailure
ngsshieldawssmtokenfailure	<Double>	Read-only	Total aws secret manager token failures
ngsshieldawssmtokenfailurerate	<Double>	Read-only	Rate (/s) counter for ngsshieldawssmtokenfailure
ngsrendezvousv1launchsuccess	<Double>	Read-only	Total rendezvous v1 launch success
ngsrendezvousv1launchsuccessrate	<Double>	Read-only	Rate (/s) counter for ngsrendezvousv1launchsuccess

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsrendezvousv1launchfailure	<Double>	Read-only	Total rendezvous v1 launch failures
ngsrendezvousv1launchfailurerate	<Double>	Read-only	Rate (/s) counter for ngsrendezvousv1launchfailure
ngsrendezvousv2launchsuccess	<Double>	Read-only	Total rendezvous v2 launch success
ngsrendezvousv2launchsuccessrate	<Double>	Read-only	Rate (/s) counter for ngsrendezvousv2launchsuccess
ngsrendezvousv2launchfailure	<Double>	Read-only	Total rendezvous v2 launch failures
ngsrendezvousv2launchfailurerate	<Double>	Read-only	Rate (/s) counter for ngsrendezvousv2launchfailure
ngsrendezvousv1sntcntcmdfailure	<Double>	Read-only	Total rendezvous v1 sent connect command failure
ngsrendezvousv1sntcntcmdfailurerate	<Double>	Read-only	Rate (/s) counter for ngsrendezvousv1sntcntcmdfailure
ngsrendezvousv2sntcntcmdfailure	<Double>	Read-only	Total rendezvous v2 sent connect command failure
ngsrendezvousv2sntcntcmdfailurerate	<Double>	Read-only	Rate (/s) counter for ngsrendezvousv2sntcntcmdfailure
ngsrendezvousv2fallbacktov1	<Double>	Read-only	Total rendezvous v2 to v1 fallback

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsrendezvousv2fallbacktov1rate	<Double>	Read-only	Rate (/s) counter for ngsrendezvousv2fallbacktov1
ngsrendezvousv2delayedresponse	<Double>	Read-only	Total rendezvous v2 delayed response
ngsrendezvousv2delayedresponserate	<Double>	Read-only	Rate (/s) counter for ngsrendezvousv2delayedresponse
ngsrendezvousv2invalidcapability	<Double>	Read-only	Total invalid rendezvous capability received
ngsrendezvousv2invalidcapabilityrate	<Double>	Read-only	Rate (/s) counter for ngsrendezvousv2invalidcapability
ngsle1secconnesttime	<Double>	Read-only	Total connection with NGS connect less than 1 sec
ngsle1secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsle1secconnesttime
ngsle2secconnesttime	<Double>	Read-only	Total connection with NGS connect less than 2 sec
ngsle2secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsle2secconnesttime
ngsle3secconnesttime	<Double>	Read-only	Total connection with NGS connect less than 3 sec

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsle3secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsle3secconnesttime
ngsle5secconnesttime	<Double>	Read-only	Total connection with NGS connect less than 5 sec
ngsle5secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsle5secconnesttime
ngsle8secconnesttime	<Double>	Read-only	Total connection with NGS connect less than 8 sec
ngsle8secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsle8secconnesttime
ngsgt8secconnesttime	<Double>	Read-only	Total connection with NGS connect greater than 8 sec
ngsgt8secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsgt8secconnesttime
ngsapplaunchattempted	<Double>	Read-only	Total app launch attempted
ngsapplaunchattemptedrate	<Double>	Read-only	Rate (/s) counter for ngsapplaunchattempted
ngsapplaunchsuccess	<Double>	Read-only	Total app launch success
ngsapplaunchsuccessrate	<Double>	Read-only	Rate (/s) counter for ngsapplaunchsuccess

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsapplaunchfailure	<Double>	Read-only	Total app launch failures
ngsapplaunchfailurerate	<Double>	Read-only	Rate (/s) counter for ngsapplaunchfailure
ngsstavalfailure	<Double>	Read-only	Total STA validation failures
ngsstavalfailurerate	<Double>	Read-only	Rate (/s) counter for ngsstavalfailure
ngsstavalsuccess	<Double>	Read-only	Total STA validation success
ngsstavalsuccessrate	<Double>	Read-only	Rate (/s) counter for ngsstavalsuccess
ngsticketsvcdown	<Double>	Read-only	Total Ticket service down
ngsticketsvcdownrate	<Double>	Read-only	Rate (/s) counter for ngsticketsvcdown
ngsdelayedconnectorresponse	<Double>	Read-only	Total delayed response received from connector
ngsdelayedconnectorresponserate	<Double>	Read-only	Rate (/s) counter for ngsdelayedconnectorresponse
ngstunnelclosedbyclient	<Double>	Read-only	Total number of tunnels closed by client
ngstunnelclosedbyclientrate	<Double>	Read-only	Rate (/s) counter for ngstunnelclosedbyclient

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngstunnelclosedbyvda	<Double>	Read-only	Total number of tunnels closed by VDA
ngstunnelclosedbyvdarate	<Double>	Read-only	Rate (/s) counter for ngstunnelclosedbyvda
ngsconncmdfailbyfr	<Double>	Read-only	Total number fo coonect command failed by FR
ngsconncmdfailbyfrrate	<Double>	Read-only	Rate (/s) counter for ngsconncmdfailbyfr
ngsconncmdfailclientconnnotfound	<Double>	Read-only	Totla connect command failed with client connection not found
ngsconncmdfailclientconnnotfoundrate	<Double>	Read-only	Rate (/s) counter for ngsconncmdfailclientconnnotfound
ngsicastart	<Double>	Read-only	Total number of ICA start
ngsicastartrate	<Double>	Read-only	Rate (/s) counter for ngsicastart
ngsicaend	<Double>	Read-only	Total number of ICA end
ngsicaendrate	<Double>	Read-only	Rate (/s) counter for ngsicaend
ngssocksapplaunchattempted	<Double>	Read-only	Total number of SOCKS app launch attempted

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngssocksapplauncha ttemptedrate	<Double>	Read-only	Rate (/s) counter for ngssocksapplauncha ttempted
ngssocksapplaunchs uccess	<Double>	Read-only	Total number of SOCKS app launch success
ngssocksapplaunchs uccessrate	<Double>	Read-only	Rate (/s) counter for ngssocksapplaunchs uccess
ngscgpapplaunchatt empted	<Double>	Read-only	Total number of CGP app launch attempted
ngscgpapplaunchatt emptedrate	<Double>	Read-only	Rate (/s) counter for ngscgpapplaunchatt empted
ngscgpapplaunchsuc cess	<Double>	Read-only	Total number of CGP app launch success
ngscgpapplaunchsuc cessrate	<Double>	Read-only	Rate (/s) counter for ngscgpapplaunchsuc cess
ngsgctapplaunchatte mpted	<Double>	Read-only	Total number of GCT app launch attempted
ngsgctapplaunchatte mptedrate	<Double>	Read-only	Rate (/s) counter for ngsgctapplaunchatte mpted
ngsgctapplaunchsuc cess	<Double>	Read-only	Total number of GCT app launch success
ngsgctapplaunchsuc cessrate	<Double>	Read-only	Rate (/s) counter for ngsgctapplaunchsuc cess

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsstaapplaunchattempted	<Double>	Read-only	Total number of STA app launch attempted
ngsstaapplaunchattemptedrate	<Double>	Read-only	Rate (/s) counter for ngsstaapplaunchattempted
ngsstaapplaunchsuccess	<Double>	Read-only	Total number of STA app launch success
ngsstaapplaunchsuccessrate	<Double>	Read-only	Rate (/s) counter for ngsstaapplaunchsuccess
ngsedtle1secconnesttime	<Double>	Read-only	Total EDT connection with connect time less than 1 sec
ngsedtle1secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle1secconnesttime
ngsedtle2secconnesttime	<Double>	Read-only	Total EDT connection with connect time less than 2 sec
ngsedtle2secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle2secconnesttime
ngsedtle3secconnesttime	<Double>	Read-only	Total EDT connection with connect time less than 3 sec
ngsedtle3secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle3secconnesttime

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsedtle5secconnesttime	<Double>	Read-only	Total EDT connection with connect time less than 5 sec
ngsedtle5secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle5secconnesttime
ngsedtle8secconnesttime	<Double>	Read-only	Total EDT connection with connect time less than 8 sec
ngsedtle8secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle8secconnesttime
ngsedtgt8secconnesttime	<Double>	Read-only	Total EDT connection with connect time greater than 8 sec
ngsedtgt8secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtgt8secconnesttime
ngsedtle1secclienthandshakeesttime	<Double>	Read-only	Total EDT handshake establishment time with client less than 1sec
ngsedtle1secclienthandshakeesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle1secclienthandshakeesttime
ngsedtle2secclienthandshakeesttime	<Double>	Read-only	Total EDT handshake establishment time

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			with client less than 2sec
ngsedtle2secclienthandshakeesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle2secclienthandshakeesttime
ngsedtle3secclienthandshakeesttime	<Double>	Read-only	Total EDT handshake establishment time with client less than 3sec
ngsedtle3secclienthandshakeesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle3secclienthandshakeesttime
ngsedtgt3secclienthandshakeesttime	<Double>	Read-only	Total EDT handshake establishment time with client greater than 3sec
ngsedtgt3secclienthandshakeesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtgt3secclienthandshakeesttime
ngsedtle1secvdahandshakeesttime	<Double>	Read-only	Total EDT handshake establishment time with vda less than 1sec
ngsedtle1secvdahandshakeesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle1secvdahandshakeesttime
ngsedtle2secvdahandshakeesttime	<Double>	Read-only	Total EDT handshake establishment time

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			with vda less than 2sec
ngsedtle2secvdahandshakeesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle2secvdahandshakeesttime
ngsedtle3secvdahandshakeesttime	<Double>	Read-only	Total EDT handshake establishment time with vda less than 3sec
ngsedtle3secvdahandshakeesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtle3secvdahandshakeesttime
ngsedtgt3secvdahandshakeesttime	<Double>	Read-only	Total EDT handshake establishment time with vda greater than 3sec
ngsedtgt3secvdahandshakeesttimerate	<Double>	Read-only	Rate (/s) counter for ngsedtgt3secvdahandshakeesttime
ngsedtconnrequest	<Double>	Read-only	Total EDT connection request
ngsedtconnrequestrate	<Double>	Read-only	Rate (/s) counter for ngsedtconnrequest
ngsedtclientconnest	<Double>	Read-only	Total client EDT connection establishment
ngsedtclientconnestrate	<Double>	Read-only	Rate (/s) counter for ngsedtclientconnest
ngsedtnonrendzconnreqdrop	<Double>	Read-only	Total connect request drop due to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			rendezvous not enabled
ngsedtnonrendzconnreqdroprate	<Double>	Read-only	Rate (/s) counter for ngsedtnonrendzconnreqdrop
ngsedtctrlsendconnfailure	<Double>	Read-only	Total send connect to controller failed
ngsedtctrlsendconnfailurerate	<Double>	Read-only	Rate (/s) counter for ngsedtctrlsendconnfailure
ngsedtapplaunchsuccess	<Double>	Read-only	Total EDT app launch success
ngsedtapplaunchsuccessrate	<Double>	Read-only	Rate (/s) counter for ngsedtapplaunchsuccess
ngsedtapplaunchfailure	<Double>	Read-only	Total EDT app launch failures
ngsedtapplaunchfailurerate	<Double>	Read-only	Rate (/s) counter for ngsedtapplaunchfailure
ngsedtstavalfailure	<Double>	Read-only	Total STA validation failures
ngsedtstavalfailurerate	<Double>	Read-only	Rate (/s) counter for ngsedtstavalfailure
ngsedtstavalsuccess	<Double>	Read-only	Total STA validation success
ngsedtstavalsuccessrate	<Double>	Read-only	Rate (/s) counter for ngsedtstavalsuccess
ngsedtfrvdaconn	<Double>	Read-only	Total FR VDA connection

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsedtfrvdaconnrate	<Double>	Read-only	Rate (/s) counter for ngsedtfrvdaconn
ngsedtfrsnconn	<Double>	Read-only	Total FR SN connection
ngsedtfrsnconnrate	<Double>	Read-only	Rate (/s) counter for ngsedtfrsnconn
ngsedtvdaconnest	<Double>	Read-only	Total VDA EDT connection establishment
ngsedtvdaconnestrate	<Double>	Read-only	Rate (/s) counter for ngsedtvdaconnest
ngsedtvdarendezvoustimeout	<Double>	Read-only	Total VDA rendezvous timeout
ngsedtvdarendezvoustimeoutrate	<Double>	Read-only	Rate (/s) counter for ngsedtvdarendezvoustimeout
ngsedtnonlossytunnel	<Double>	Read-only	Total EDT non lossy tunnels
ngsedtnonlossytunnelrate	<Double>	Read-only	Rate (/s) counter for ngsedtnonlossytunnel
ngsedtlossytunnel	<Double>	Read-only	Total EDT lossy tunnels
ngsedtlossytunnelrate	<Double>	Read-only	Rate (/s) counter for ngsedtlossytunnel
ngsedtgetrequestsenttoredis	<Double>	Read-only	Total Redis GET Request

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsedtgetrequestsenttoredisrate	<Double>	Read-only	Rate (/s) counter for ngsedtgetrequestsenttoredis
ngsedtredislookupsuccess	<Double>	Read-only	Total Redis lookup success
ngsedtredislookupsuccessrate	<Double>	Read-only	Rate (/s) counter for ngsedtredislookupsuccess
ngsedtredislookupfailure	<Double>	Read-only	Total Redis lookup failure
ngsedtredislookupfailurerate	<Double>	Read-only	Rate (/s) counter for ngsedtredislookupfailure
ngsedtredisentryadd succes	<Double>	Read-only	Entries Added To Redis Successfully
ngsedtredisentryadd succesrate	<Double>	Read-only	Rate (/s) counter for ngsedtredisentryadd succes
ngsedtredisentryaddfailure	<Double>	Read-only	Entries Addition to Redis failure
ngsedtredisentryaddfailurerate	<Double>	Read-only	Rate (/s) counter for ngsedtredisentryaddfailure
ngsedtredisentrydeletesuccess	<Double>	Read-only	Entry Deleted Successfully In Redis
ngsedtredisentrydeletesuccessrate	<Double>	Read-only	Rate (/s) counter for ngsedtredisentrydeletesuccess

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsedtredisentrydeletefailure	<Double>	Read-only	Entry Deletion Failed in Redis
ngsedtredisentrydeletefailurerate	<Double>	Read-only	Rate (/s) counter for ngsedtredisentrydeletefailure
ngsedttotsessionsreroutingdatapkt	<Double>	Read-only	Total EDT Sessions Re-Routing Data Pkt
ngsedtsessionsreroutingdatapktrate	<Double>	Read-only	Rate (/s) counter for ngsedttotsessionsreroutingdatapkt
ngsedttotsessionsreceivingredirectedpkt	<Double>	Read-only	Total EDT Sessions Receiving Redirected Pkt
ngsedtsessionsreceivingredirectedpktrate	<Double>	Read-only	Rate (/s) counter for ngsedttotsessionsreceivingredirectedpkt
ngsedtcurrentsessionsreroutingdatapkt	<Double>	Read-only	Current EDT Sessions Re-Routing Data Pkt
ngsedtcurrentsessionsreroutingdatapktrate	<Double>	Read-only	Rate (/s) counter for ngsedtcurrentsessionsreroutingdatapkt
ngsedtcurrentsessionsreceivingredirectedpkt	<Double>	Read-only	Current EDT Sessions Receiving Redirected Pkt
ngsedtcurrentsessionsreceivingredirectedpktrate	<Double>	Read-only	Rate (/s) counter for ngsedtcurrentsessionsreceivingredirectedpkt
ngsagentaccessle1secconnesttime	<Double>	Read-only	Total Agent Access based Connection

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			with connect time less than 1 sec
ngsagentaccessle1secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsagentaccessle1secconnesttime
ngsagentaccessle2secconnesttime	<Double>	Read-only	Total Agent Access based Connection with connect time less than 2 sec
ngsagentaccessle2secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsagentaccessle2secconnesttime
ngsagentaccessle3secconnesttime	<Double>	Read-only	Total Agent Access based Connection with connect time less than 3 sec
ngsagentaccessle3secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsagentaccessle3secconnesttime
ngsagentaccessle5secconnesttime	<Double>	Read-only	Total Agent Access based Connection with connect time less than 5 sec
ngsagentaccessle5secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsagentaccessle5secconnesttime
ngsagentaccessle8secconnesttime	<Double>	Read-only	Total Agent Access based Connection with connect time less than 8 sec
ngsagentaccessle8secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsagentaccessle8secconnesttime

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngsagentaccessle13 secconnesttime	<Double>	Read-only	Total Agent Access based Connection with connect time less than 13 sec
ngsagentaccessle13 secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsagentaccessle13 secconnesttime
ngsagentaccessle21 secconnesttime	<Double>	Read-only	Total Agent Access based Connection with connect time less than 21 sec

ngsagentaccessgt21 secconnesttime	<Double>	Read-only	Total Agent Access based Connection with connect time greater than 21 sec
ngsagentaccessgt21 secconnesttimerate	<Double>	Read-only	Rate (/s) counter for ngsagentaccessgt21 secconnesttime

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/cloud **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/cloud? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get cloud resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/cloud? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```

cluster

Cluster

Cluster commands.

NAME	DESCRIPTION
clusterinstance	Statistics for cluster instance resource.
clusternode	Statistics for cluster node resource.

clusterinstance

Statistics for cluster instance resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clid	<Integer>	Read-write	ID of the cluster instance for which to display statistics. Minimum value = 1 Maximum value = 128
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
clbkplanetx	<Double>	Read-only	Traffic transmitted from backplane (in mbits)
clbkplanetxrate	<Double>	Read-only	Rate (/s) counter for clbkplanetx
clbkplanerx	<Double>	Read-only	Traffic received on backplane (in mbits)
clbkplanerxrate	<Double>	Read-only	Rate (/s) counter for clbkplanerx
clnumnodes	<Double>	Read-only	Number of nodes in the cluster.
clcurstatus	<String>	Read-only	State of the cluster.
clviewleader	<String>	Read-only	NSIP address of the Configuration Coordinator of the cluster.
totsteeredpkts	<Double>	Read-only	Total number of packets steered on

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the cluster backplane.
steeredpktsrate	<Double>	Read-only	Rate (/s) counter for totsteeredpkts
numdfddroppkts	<Double>	Read-only	Number of steered packets that are dropped.
totpropagationtimeout	<Double>	Read-only	Number of times the update to the client timed-out.

Operations

```

clusternode

Statistics for cluster node resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
nodeid	<Integer>	Read-write	ID of the cluster node for which to display statistics. If an ID is not provided,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			statistics are shown for all nodes. Minimum value = 0 Maximum value = 31
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
clsyncstate	<String>	Read-only	Sync state of the cluster node.
clnodeeffectivehealth	<String>	Read-only	Health of the cluster node.
clnodeip	<String>	Read-only	NSIP address of the cluster node.
clmasterstate	<String>	Read-only	Operational state of the cluster node.
cltothbtx	<Double>	Read-only	Number of heartbeats sent. When executed from the NSIP address, shows the statistics for local node only. For remote node it shows a value of 0. When executed from the cluster IP address, shows all the statistics.
cltothbrx	<Double>	Read-only	Number of heartbeats received. When executed from the NSIP address,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			shows the statistics for local node only. For remote node it shows a value of 0. When executed from the cluster IP address, shows all the statistics.
nnmcurconn	<Double>	Read-only	Number of connections open for node-to-node communication.
nnmtotconntx	<Double>	Read-only	Number of node-to-node messages sent. When executed from the NSIP address, shows the statistics for local node only. For remote node it shows a value of 0. When executed from the cluster IP address, shows all the statistics.
nnmtotconnrx	<Double>	Read-only	Number of node-to-node messages received. When executed from the NSIP address, shows the statistics for local node only. For remote node it shows a value of 0. When executed from the cluster IP address, shows all the statistics.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clptpstate	<String>	Read-only	PTP state of the node. This state is Master for one node and Slave for the rest. When executed from the NSIP address, shows the statistics for local node only. For remote node it shows UNKNOWN. When executed from the cluster IP address, shows all the statistics.
clptptx	<Double>	Read-only	Number of PTP packets transmitted by the node. When executed from the NSIP address, shows the statistics for local node only. For remote node it shows a value of 0. When executed from the cluster IP address, shows all the statistics.
clptprx	<Double>	Read-only	Number of PTP packets received on the node. When executed from the NSIP address, shows the statistics for local node only. For remote node it shows a value of 0. When executed from the cluster IP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			address, shows all the statistics.
nnmerrmsend	<Double>	Read-only	Number of errors in sending node-to-node multicast/ broadcast messages. When executed from the NSIP address, shows the statistics for local node only. For remote node it shows a value of 0. When executed from the cluster IP address, shows all the statistics.

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/clusternode **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/clusternode? **args=nodeid: <Integer_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get clusternode resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/clusternode? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

```

cmp

Compression

Compression statistics. The system's feature for compressing HTTP responses to compression-aware browsers.

NAME	DESCRIPTION
cmp	Statistics for cmp.
cmppolicy	Statistics for compression policy resource.
cmppolicylabel	Statistics for compression policy label resource.

cmp

Statistics for cmp.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
delbwsaving	<Double>	Read-only	Bandwidth saving from delta compression expressed as percentage.
delcmpratio	<Double>	Read-only	Ratio of compressible data

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			received to compressed data transmitted.If this ratio is one (uncmp:1.0) that means compression is disabled or we are not able to compress even a single compressible packet.
decomptcpratio	<Double>	Read-only	Ratio of decompressed data transmitted to compressed data received.
decomptcpbandwidthsaving	<Double>	Read-only	Bandwidth saving from TCP compression expressed as percentage.
comptcpratio	<Double>	Read-only	Ratio of compressible data received to compressed data transmitted.If this ratio is one (uncmp:1.0) that means compression is disabled or we are not able to compress even a single compressible packet.
comptcpbandwidthsaving	<Double>	Read-only	Bandwidth saving from TCP compression expressed as percentage.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
comptotaldatacompressionratio	<Double>	Read-only	Ratio of total HTTP data received to total HTTP data transmitted.
comphttpbandwidthsaving	<Double>	Read-only	Bandwidth saving from TCP compression expressed as percentage.
compratio	<Double>	Read-only	Ratio of the compressible data received from the server to the compressed data sent to the client.
comptotalrequests	<Double>	Read-only	Number of HTTP compression requests the Citrix ADC receives for which the response is successfully compressed. For example, after you enable compression and configure services, if you send HTTP requests to the Citrix ADC using a HTTP client that supports compression, and Citrix ADC compresses the corresponding response, this counter is incremented.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
comprequestsrate	<Double>	Read-only	Rate (/s) counter for comptotalrequests
comptotalrxbytes	<Double>	Read-only	Number of bytes that can be compressed, which the Citrix ADC receives from the server. This gives the content length of the response that the Citrix ADC receives from server.
comprxbytesrate	<Double>	Read-only	Rate (/s) counter for comptotalrxbytes
comptotaltxbytes	<Double>	Read-only	Number of bytes the Citrix ADC sends to the client after compressing the response from the server.
comptxbytesrate	<Double>	Read-only	Rate (/s) counter for comptotaltxbytes
comptotalrxpackets	<Double>	Read-only	Number of HTTP packets that can be compressed, which the Citrix ADC receives from the server.
comprxpacketsrate	<Double>	Read-only	Rate (/s) counter for comptotalrxpackets
comptotaltxpackets	<Double>	Read-only	Number of HTTP packets that the Citrix ADC sends to the client after compressing the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			response from the server.
comptxpacketsrate	<Double>	Read-only	Rate (/s) counter for comptotaltxpackets
comptcptotalrxbytes	<Double>	Read-only	Number of bytes that can be compressed, which the Citrix ADC receives from the server. This gives the content length of the response that the Citrix ADC receives from server.
comptcprxbytesrate	<Double>	Read-only	Rate (/s) counter for comptcptotalrxbytes
comptcptotalrxpackets	<Double>	Read-only	Total number of compressible packets received by Citrix ADC.
comptcprxpacketsrate	<Double>	Read-only	Rate (/s) counter for comptcptotalrxpackets
comptcptotaltxbytes	<Double>	Read-only	Number of bytes that the Citrix ADC sends to the client after compressing the response from the server.
comptcptxbytesrate	<Double>	Read-only	Rate (/s) counter for comptcptotaltxbytes
comptcptotaltxpackets	<Double>	Read-only	Number of TCP packets that the Citrix ADC sends to the client after

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			compressing the response from the server.
comptcptxpacketsrate	<Double>	Read-only	Rate (/s) counter for comptcptotaltxpackets
comptcptotalquantum	<Double>	Read-only	Number of times the Citrix ADC compresses a quantum of data. Citrix ADC buffers the data received from the server till it reaches the quantum size and then compresses the buffered data and transmits to the client.
comptcpquantumrate	<Double>	Read-only	Rate (/s) counter for comptcptotalquantum
comptcptotalpush	<Double>	Read-only	Number of times the Citrix ADC compresses data on receiving a TCP PUSH flag from the server. The PUSH flag ensures that data is compressed immediately without waiting for the buffered data size to reach the quantum size.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
comptcppushrate	<Double>	Read-only	Rate (/s) counter for comptcptotalpush
comptcptotaleoi	<Double>	Read-only	Number of times the Citrix ADC compresses data on receiving End Of Input (FIN packet). When the Citrix ADC receives End Of Input (FIN packet), it compresses the buffered data immediately without waiting for the buffered data size to reach the quantum size.
comptcpeoirate	<Double>	Read-only	Rate (/s) counter for comptcptotaleoi
comptcptotaltimer	<Double>	Read-only	Number of times the Citrix ADC compresses data on expiration of data accumulation timer. The timer expires if the server response is very slow and consequently, the Citrix ADC does not receive response for a certain amount of time. Under such a condition, the Citrix ADC compresses the buffered data immediately without waiting for the buffered data size to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			reach the quantum size.
comptcptimerrate	<Double>	Read-only	Rate (/s) counter for comptcptotaltimer
decomptcprxbytes	<Double>	Read-only	Total number of compressed bytes received by Citrix ADC.
decomptcprxbytesrate	<Double>	Read-only	Rate (/s) counter for decomptcprxbytes
decomptcprxpackets	<Double>	Read-only	Total number of compressed packets received by Citrix ADC.
decomptcprxpacketsrate	<Double>	Read-only	Rate (/s) counter for decomptcprxpackets
decomptcptxbytes	<Double>	Read-only	Total number of decompressed bytes transmitted by Citrix ADC.
decomptcptxbytesrate	<Double>	Read-only	Rate (/s) counter for decomptcptxbytes
decomptcptxpackets	<Double>	Read-only	Total number of decompressed packets transmitted by Citrix ADC.
decomptcptxpacketsrate	<Double>	Read-only	Rate (/s) counter for decomptcptxpackets
decomptcperrdata	<Double>	Read-only	Number of data errors encountered while decompressing.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
decomptcperrdatarate	<Double>	Read-only	Rate (/s) counter for decomptcperrdata
decomptcperrlessdata	<Double>	Read-only	Number of times Citrix ADC received less data than declared by protocol.
decomptcperrlessdatarate	<Double>	Read-only	Rate (/s) counter for decomptcperrlessdata
decomptcperrmoredata	<Double>	Read-only	Number of times Citrix ADC received more data than declared by protocol.
decomptcperrmoredatarate	<Double>	Read-only	Rate (/s) counter for decomptcperrmoredata
decomptcperrmemory	<Double>	Read-only	Number of times memory failures occurred while decompressing.
decomptcperrmemoryrate	<Double>	Read-only	Rate (/s) counter for decomptcperrmemory
decomptcperrunknown	<Double>	Read-only	Number of times unknown errors occurred while decompressing.
decomptcperrunknownrate	<Double>	Read-only	Rate (/s) counter for decomptcperrunknown
delcomptotalrequests	<Double>	Read-only	Total number of delta compression

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			requests received by Citrix ADC.
delcomprequestsrate	<Double>	Read-only	Rate (/s) counter for delcomptotalrequests
delcompdone	<Double>	Read-only	Total number of delta compressions done by Citrix ADC.
delcompdonerate	<Double>	Read-only	Rate (/s) counter for delcompdone
delcomptcprxbytes	<Double>	Read-only	Total number of delta-compressible bytes received by Citrix ADC.
delcomptcprxbytesrate	<Double>	Read-only	Rate (/s) counter for delcomptcprxbytes
delcomptcptxbytes	<Double>	Read-only	Total number of delta-compressed bytes transmitted by Citrix ADC.
delcomptcptxbytesrate	<Double>	Read-only	Rate (/s) counter for delcomptcptxbytes
delcompfirstaccess	<Double>	Read-only	Total number of delta compression first accesses.
delcompfirstaccessrate	<Double>	Read-only	Rate (/s) counter for delcompfirstaccess
delcomptcprxpackets	<Double>	Read-only	Number of delta-compressible packets received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
delcomptcprxpackets rate	<Double>	Read-only	Rate (/s) counter for delcomptcprxpackets
delcomptcptxpackets	<Double>	Read-only	Total number of delta-compressed packets transmitted by Citrix ADC.
delcomptcptxpackets rate	<Double>	Read-only	Rate (/s) counter for delcomptcptxpackets
delcompbaseserved	<Double>	Read-only	Total number of basefile requests served by Citrix ADC.
delcompbaseservedr ate	<Double>	Read-only	Rate (/s) counter for delcompbaseserved
delcompbasetcptxbyt es	<Double>	Read-only	Number of basefile bytes transmitted by Citrix ADC.
delcompbasetcptxbyt esrate	<Double>	Read-only	Rate (/s) counter for delcompbasetcptxbyt es
delcomperrbypassed	<Double>	Read-only	Number of times delta-compression bypassed by Citrix ADC.
delcomperrbypassed rate	<Double>	Read-only	Rate (/s) counter for delcomperrbypassed
delcomperrbfilewhdrf ailed	<Double>	Read-only	Number of times basefile could not be updated in Citrix ADC cache.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
delcomperrbfilewhdrfailedrate	<Double>	Read-only	Rate (/s) counter for delcomperrbfilewhdrfailed
delcomperrnostoremiss	<Double>	Read-only	Number of times basefile was not found in Citrix ADC cache.
delcomperrnostoremissrate	<Double>	Read-only	Rate (/s) counter for delcomperrnostoremiss
delcomperrreqinfotoobig	<Double>	Read-only	Number of times basefile request URL was too large.
delcomperrreqinfotoobigrate	<Double>	Read-only	Rate (/s) counter for delcomperrreqinfotoobig
delcomperrreqinfoallocfail	<Double>	Read-only	Number of times requested basefile could not be allocated.
delcomperrreqinfoallocfailrate	<Double>	Read-only	Rate (/s) counter for delcomperrreqinfoallocfail
delcomperrsessallocfail	<Double>	Read-only	Number of times delta compression session could not be allocated.
delcomperrsessallocfailrate	<Double>	Read-only	Rate (/s) counter for delcomperrsessallocfail

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/cmp **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/cmp? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get cmp resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/cmp? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/contentinspection **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/contentinspection? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get contentinspection resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/contentinspection? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

cr

Cache Redirection

Cache redirection statistics. The cache redirection feature can transparently redirect cacheable HTTP requests to a cache and send non-cacheable or dynamic HTTP requests to the origin server. A cache stores or caches frequently requested web content and serves such web content to a client on behalf of the origin servers, alleviating the load on the origin server farm.

NAME	DESCRIPTION
crvserver	Statistics for CR virtual server resource.

crvserver

Statistics for CR virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of a specific cache redirection virtual server. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4),

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
tothits	<Double>	Read-only	Total vserver hits
hitsrate	<Double>	Read-only	Rate (/s) counter for tothits
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes

cs

Content Switching

Content Switching statistics. Content Switching feature that enables you to direct traffic to servers on the basis of content.

NAME	DESCRIPTION
csvserver	Statistics for CS virtual server resource.

csvserver

Statistics for CS virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the content switching virtual server for which to display statistics. To display statistics for all configured Content Switching virtual servers, do not specify a value for this parameter. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
avgcltttlb	<Double>	Read-only	Average TTLB between the client and the server. TTLB is the time interval between sending the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			request packet to a service and receiving the ACK for response from client.
cltresponsetimeapdex	<Double>	Read-only	Vserver APDEX index based on client response times.
establishedconn	<Double>	Read-only	Number of client connections in ESTABLISHED state.
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
tothits	<Double>	Read-only	Total vserver hits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
hitsrate	<Double>	Read-only	Rate (/s) counter for tothits
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalpktsrecvd	<Double>	Read-only	Total number of packets received by this service or virtual server.
pktsrecvdrate	<Double>	Read-only	Rate (/s) counter for totalpktsrecvd
totalpktssent	<Double>	Read-only	Total number of packets sent.
pktssentrate	<Double>	Read-only	Rate (/s) counter for totalpktssent
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.
curpersistencesessions	<Double>	Read-only	current vserver owned persistence sessions
curbackuppersistencesessions	<Double>	Read-only	current vserver owned backup persistence sessions
sothreshold	<Double>	Read-only	Spill Over Threshold set on the VServer.
totspillovers	<Double>	Read-only	Number of times vserver experienced spill over.
labelledconn	<Double>	Read-only	Number of Labeled connection on this vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pushlabel	<Double>	Read-only	Number of labels for this push vserver.
deferredreq	<Double>	Read-only	Number of deferred request on this vserver
deferredreqrate	<Double>	Read-only	Rate (/s) counter for deferredreq
invalidrequestrespon se	<Double>	Read-only	Number invalid requests/responses on this vserver
invalidrequestrespon sedropped	<Double>	Read-only	Number invalid requests/responses dropped on this vserver
totvserverdownbacku phits	<Double>	Read-only	Number of times traffic was diverted to backup vserver since primary vserver was DOWN.
curmptcpsessions	<Double>	Read-only	Current Multipath TCP sessions
cursubflowconn	<Double>	Read-only	Current Multipath TCP subflows
httpmaxhdrszpkts	<Double>	Read-only	Number of http max header size packet parsing failures
httpmaxhdrfldlenpkts	<Double>	Read-only	Number of HTTP requests exceeding max header field length

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcpmaxooopkts	<Double>	Read-only	No of times max out of order packets reached
totclttlbtransactions	<Double>	Read-only	Total transactions where client TTLB is calculated.
toleratingttlbtransactions	<Double>	Read-only	Tolerable transactions based on APDEX threshold (>T ;; <4T).
frustratingttlbtransactions	<Double>	Read-only	Frustrating transactions based on APDEX threshold (>4T).

dns

Domain Name Service

Domain Name Service(DNS) statistics.

NAME	DESCRIPTION
dns	Statistics for dns.
dnspolicylabel	Statistics for dns policy label resource.
dnsrecords	

dns

Statistics for dns.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
dnstotqueries	<Double>	Read-only	Total number of DNS queries received.
dnsqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotqueries
dnstotmultiquery	<Double>	Read-only	Total number of Multi Query request received.
dnstotanswers	<Double>	Read-only	Total number of DNS responses received.
dnsanswersrate	<Double>	Read-only	Rate (/s) counter for dnstotanswers
dnstotserverresponse	<Double>	Read-only	Total number of Server responses received.
dnsserverresponserate	<Double>	Read-only	Rate (/s) counter for dnstotserverresponse
dnstotrecupdate	<Double>	Read-only	Total number of record updates.
dnscurcachesize	<Double>	Read-only	Current DNS cache size

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnscurnegcachesize	<Double>	Read-only	Current Negative DNS cache size
dnstotjumboqueries	<Double>	Read-only	Total number of Jumbo DNS queries received over UDP.
dnsjumboqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotjumboqueries
dnstotjumboanswers	<Double>	Read-only	Total number of Jumbo DNS responses sent over UDP.
dnsjumboanswersrate	<Double>	Read-only	Rate (/s) counter for dnstotjumboanswers
dnstotjumboserverresponses	<Double>	Read-only	Total number of Jumbo DNS responses received over UDP.
dnsjumboserverresponsesrate	<Double>	Read-only	Rate (/s) counter for dnstotjumboserverresponses
dnstotauthans	<Double>	Read-only	Number of queries which were authoritatively answered.
dnstotserverquery	<Double>	Read-only	Total number of Server queries sent.
dnsserverqueryrate	<Double>	Read-only	Rate (/s) counter for dnstotserverquery
dnstotcacheflush	<Double>	Read-only	Total number of times cache was flushed.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnstotcacheentriesflush	<Double>	Read-only	Total number of cache entries flushed.
dnscurnoauthentries	<Double>	Read-only	Total number of non-authoritative entries.
dnscurauthentries	<Double>	Read-only	Total number of authoritative entries.
dnstotauthnonames	<Double>	Read-only	Number of queries for which no record was found.
dnstotunsupportedresponseclass	<Double>	Read-only	Total number of responses for which response types were unsupported.
dnstotinvalidqueryformat	<Double>	Read-only	Total number of queries whose format was invalid.
dnstotstrayanswer	<Double>	Read-only	Total number of stray answers.
dnstotresponsebadlen	<Double>	Read-only	Number of DNS responses received with invalid resoure data length.
dnstotreqrefusals	<Double>	Read-only	Number of DNS requests refused.
dnserrnullattack	<Double>	Read-only	Total number of queries received where all the counts are 0.
dnstotunsupportedresponsetype	<Double>	Read-only	Total number of responses for which response type

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			requested was unsupported.
dnstotunsupportedqueryclass	<Double>	Read-only	Total number of queries for which query class was unsupported.
dnstotnonauthnodatas	<Double>	Read-only	Total number of responses for which there was a format error.
dnstotnodataresps	<Double>	Read-only	Number of DNS responses received without answer.
dnstotmultiquerydisableerror	<Double>	Read-only	Total number of times a multi query was disabled and received a multi query.
dnstotothererrors	<Double>	Read-only	Total number of other errors.
dns64totqueries	<Double>	Read-only	Total number of DNS64 queries recieved.
dns64queriesrate	<Double>	Read-only	Rate (/s) counter for dns64totqueries
dns64totanswers	<Double>	Read-only	Total number of DNS64 answers served.
dns64answersrate	<Double>	Read-only	Rate (/s) counter for dns64totanswers
dns64totrwanswers	<Double>	Read-only	Total number of DNS64 answers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			served after rewriting the response.
dns64rwanswersrate	<Double>	Read-only	Rate (/s) counter for dns64totrwanswers
dns64totresponses	<Double>	Read-only	Total number of responses recieved from backend in DNS64 context.
dns64responsesrate	<Double>	Read-only	Rate (/s) counter for dns64totresponses
dns64totgslbqueries	<Double>	Read-only	Total number of DNS64 queries for GSLB domain
dns64gslbqueriesrate	<Double>	Read-only	Rate (/s) counter for dns64totgslbqueries
dns64totgslbanswers	<Double>	Read-only	Total number of DNS64 queries served.
dns64gslbanswersrate	<Double>	Read-only	Rate (/s) counter for dns64totgslbanswers
dns64tottcanswers	<Double>	Read-only	Total number of Answers served with TC bit set in DNS64 context.
dns64tcanswersrate	<Double>	Read-only	Rate (/s) counter for dns64tottcanswers
dns64totsvraqueries	<Double>	Read-only	Total number of Queries sent by DNS64 module to backend.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dns64svraqueriesrate	<Double>	Read-only	Rate (/s) counter for dns64totsvraqueries
dns64totaaaabypass	<Double>	Read-only	Total number of times AAAA query has been bypassed in DNS64 trnsaction.
dns64aaaabypassrate	<Double>	Read-only	Rate (/s) counter for dns64totaaaabypass
dns64tottcpqueries	<Double>	Read-only	Total number of dns64 queries over TCP
dns64tcpqueriesrate	<Double>	Read-only	Rate (/s) counter for dns64tottcpqueries
dns64activepolicies	<Double>	Read-only	Total number of active dns64 policies
dns64totnodataresp	<Double>	Read-only	Total number of responses recieved from backend with ancount 0
dns64nodataresprate	<Double>	Read-only	Rate (/s) counter for dns64totnodataresp
dnstotnsrecqueries	<Double>	Read-only	Total number of NS queries received.
dnsnsrecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotnsrecqueries
dnstotsoarecqueries	<Double>	Read-only	Total number of SOA queries received.
dnssoarecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotsoarecqueries

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnstotptrrecqueries	<Double>	Read-only	Total number of PTR queries received.
dnsptrrecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotptrrecqueries
dnstotsrvrecqueries	<Double>	Read-only	Total number of SRV queries received.
dnssrvrecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotsrvrecqueries
dnstotaresponse	<Double>	Read-only	Total number of A responses received.
dnsaresponserate	<Double>	Read-only	Rate (/s) counter for dnstotaresponse
dnstotcnameresponse	<Double>	Read-only	Total number of CNAME responses received.
dnscnameresponserate	<Double>	Read-only	Rate (/s) counter for dnstotcnameresponse
dnstotmxresponse	<Double>	Read-only	Total number of MX responses received.
dnsmxresponserate	<Double>	Read-only	Rate (/s) counter for dnstotmxresponse
dnstotanyresponse	<Double>	Read-only	Total number of ANY responses received.
dnsanyresponserate	<Double>	Read-only	Rate (/s) counter for dnstotanyresponse
dnstotnsrecupdate	<Double>	Read-only	Total number of NS record updates.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnstotsoarecupdate	<Double>	Read-only	Total number of SOA record updates.
dnstotptrrecupdate	<Double>	Read-only	Total number of PTR record updates.
dnstotsrvrecupdate	<Double>	Read-only	Total number of SRV record updates.
dnstotaaaarecqueries	<Double>	Read-only	Total number of AAAA queries received.
dnsaaaarecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotaaaarecqueries
dnstotarecqueries	<Double>	Read-only	Total number of A queries received.
dnsarecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotarecqueries
dnstotcnamerecqueries	<Double>	Read-only	Total number of CNAME queries received.
dnscnamerecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotcnamerecqueries
dnstotmxrecqueries	<Double>	Read-only	Total number of MX queries received.
dnsmxrecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotmxrecqueries
dnstotanyqueries	<Double>	Read-only	Total number of ANY queries received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnsanyqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotanyqueries
dnstotaaaaresponse	<Double>	Read-only	Total number of AAAA responses received.
dnsaaaaresponserate	<Double>	Read-only	Rate (/s) counter for dnstotaaaaresponse
dnstotnsresponse	<Double>	Read-only	Total number of NS responses received.
dnsnsresponserate	<Double>	Read-only	Rate (/s) counter for dnstotnsresponse
dnstotsoaresponse	<Double>	Read-only	Total number of SOA responses received.
dnssoaresponserate	<Double>	Read-only	Rate (/s) counter for dnstotsoaresponse
dnstotptrresponse	<Double>	Read-only	Total number of PTR responses received.
dnsptrresponserate	<Double>	Read-only	Rate (/s) counter for dnstotptrresponse
dnstotsrvresponse	<Double>	Read-only	Total number of SRV responses received.
dnssrvresponserate	<Double>	Read-only	Rate (/s) counter for dnstotsrvresponse
dnstotaaaarecupdate	<Double>	Read-only	Total number of AAAA record updates.
dnstotarecupdate	<Double>	Read-only	Total number of A record updates.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnstotmxrecupdate	<Double>	Read-only	Total number of MX record updates.
dnstotcnamerecupdate	<Double>	Read-only	Total number of CNAME record updates.
dnscuraaaarecord	<Double>	Read-only	Total number of AAAA records.
dnscurarecord	<Double>	Read-only	Total number of A records.
dnscurmxrecord	<Double>	Read-only	Total number of MX records.
dnscurcnamerecord	<Double>	Read-only	Total number of CNAME records.
dnscurnsrecord	<Double>	Read-only	Total number of NS records.
dnscursoarecord	<Double>	Read-only	Total number of SOA records.
dnscurptrrecord	<Double>	Read-only	Total number of PTR records.
dnscursrvrecord	<Double>	Read-only	Total number of SRV records.
dnstotaaaarecfailed	<Double>	Read-only	Total number of times AAAA record lookup failed.
dnstotarecfailed	<Double>	Read-only	Total number of times A record lookup failed.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnstotmxrecfailed	<Double>	Read-only	Total number of times MX record lookup failed.
dnstotptrrecfailed	<Double>	Read-only	Total number of times PTR record lookup failed.
dnstotnsrecfailed	<Double>	Read-only	Total number of times NS record lookup failed.
dnstotcnamerecfailed	<Double>	Read-only	Total number of times CNAME record lookup failed.
dnstotsoarecfailed	<Double>	Read-only	Total number of times SOA record lookup failed.
dnstotsrvrecfailed	<Double>	Read-only	Total number of times SRV record lookup failed.
dnstotanyrecfailed	<Double>	Read-only	Total number of times ANY query lookup failed.
dnstotunsupportedqueries	<Double>	Read-only	Total number of requests for which query type requested was unsupported.

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/dns **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/dns? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get dns resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/dns? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

dnspolicylabel

Statistics for dns policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	The name of the dns policy label for which statistics will be displayed. If not given statistics are shown for all dns policylabels. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pipolicylabelhits	<Double>	Read-only	Number of times policy label was invoked.
pipolicylabelhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicylabelhits

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

dnsrecords

Read/write properties

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnsrecordtype	<String>	Read-write	Display statistics for the specified DNS record or query type or, if a record or query type is not specified, statistics for all record types supported on the Citrix ADC.
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
dnstotentries	<Double>	Read-only	Total number of DNS record entries
dnstotupdates	<Double>	Read-only	Total number of DNS proactive updates
dnstotresponses	<Double>	Read-only	Total number of DNS server responses
dnstotrequests	<Double>	Read-only	Total number of DNS queries recieved
dnscurentries	<Double>	Read-only	Current number of DNS entries

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnstotqueryforexpiredrecord	<Double>	Read-only	Total number of times query was received for expired record
dnstoterrlimits	<Double>	Read-only	Total number of times we have recieved dns record with more entries than we support
dnstoterrrespform	<Double>	Read-only	Total number of times we have recieved malformed responses from the backend
dnstoterraliasex	<Double>	Read-only	Total number of times we have recieved non-cname record for a domain for which an alias exists
dnstoterrnodomains	<Double>	Read-only	Total number of cache misses
dnscurrecords	<Double>	Read-only	Current number of DNS Records

Operations

feo

Front-end-optimization

Front end optimization statistics. The system's feature to optimize Web content for performance.

NAME	DESCRIPTION
feo	Statistics for feo.

feo

Statistics for feo.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
optcacheobjects	<Double>	Read-only	Total number of optimized cache objects ready to be served.
optcacheobjectsrate	<Double>	Read-only	Rate (/s) counter for optcacheobjects
origcacheobjects	<Double>	Read-only	Total number of original cache

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			objects ready to be served.
origcacheobjectsrate	<Double>	Read-only	Rate (/s) counter for origcacheobjects
totalimgsdomainsharded	<Double>	Read-only	Total no of images whose domain has been set from shards.
imgsdomainshardedrate	<Double>	Read-only	Rate (/s) counter for totalimgsdomainsharded
totalimgslazyloaded	<Double>	Read-only	Total number of images modified for lazy loading.
imgslazyloadedrate	<Double>	Read-only	Rate (/s) counter for totalimgslazyloaded
toturireplaced	<Double>	Read-only	Total number of URI replaced.
urireplacedrate	<Double>	Read-only	Rate (/s) counter for toturireplaced
totalimgsinlinedincss	<Double>	Read-only	Total number of images inlined in CSS.
imgsinlinedincssrate	<Double>	Read-only	Rate (/s) counter for totalimgsinlinedincss
totalinlinedjs	<Double>	Read-only	Total number of inlined JS files.
inlinedjsrate	<Double>	Read-only	Rate (/s) counter for totalinlinedjs

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalinlinedcss	<Double>	Read-only	Total number of inlined CSS files.
inlinedcssrate	<Double>	Read-only	Rate (/s) counter for totalinlinedcss
totalinlinedimgs	<Double>	Read-only	Total number of inlined images in HTML.
inlinedimgsrate	<Double>	Read-only	Rate (/s) counter for totalinlinedimgs
totaldatasavings	<Double>	Read-only	Total data savings in bytes.
datasavingsrate	<Double>	Read-only	Rate (/s) counter for totaldatasavings
htmlcommentsremoved	<Double>	Read-only	The total number of HTML comments removed.
htmlcommentsremovedrate	<Double>	Read-only	Rate (/s) counter for htmlcommentsremoved
totalcacheextended	<Double>	Read-only	The total number of objects cache extended.
cacheextendedrate	<Double>	Read-only	Rate (/s) counter for totalcacheextended
totalcsscombined	<Double>	Read-only	The total number of CSS combined.
csscombinedrate	<Double>	Read-only	Rate (/s) counter for totalcsscombined

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalimporttolink	<Double>	Read-only	The total number of CSS imports converted to links
importtolinkrate	<Double>	Read-only	Rate (/s) counter for totalimporttolink
totaljsmoved	<Double>	Read-only	The total number of JS moved to end.
jsmovedrate	<Double>	Read-only	Rate (/s) counter for totaljsmoved
totalcssmoved	<Double>	Read-only	The total number of CSS moved to head.
cssmovedrate	<Double>	Read-only	Rate (/s) counter for totalcssmoved
totaljsmin	<Double>	Read-only	The total number of JS files minified.
jsminrate	<Double>	Read-only	Rate (/s) counter for totaljsmin
totalcssmin	<Double>	Read-only	The total number of CSS files minified.
cssminrate	<Double>	Read-only	Rate (/s) counter for totalcssmin
totalimgstojxr	<Double>	Read-only	The total number of images converted to JPEGXR format.
imgstojxrrate	<Double>	Read-only	Rate (/s) counter for totalimgstojxr
totalimgstowebp	<Double>	Read-only	The total number of images converted to WEBP format.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
imgstowebprate	<Double>	Read-only	Rate (/s) counter for totalimgstowebp
totaljpegsoptimized	<Double>	Read-only	The total number of JPEG format images optimized.
jpegsoptimizedrate	<Double>	Read-only	Rate (/s) counter for totaljpegsoptimized
totalgifstopng	<Double>	Read-only	The total number of images converted from GIF to PNG format.
gifstopngrate	<Double>	Read-only	Rate (/s) counter for totalgifstopng
totalimgsresized	<Double>	Read-only	The total number of images resized to dimensions in the <img> tag.
imgsresizedrate	<Double>	Read-only	Rate (/s) counter for totalimgsresized

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/feo **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/feo? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get feo resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/feo? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

gslb

Global Server Load Balancing

Global Server Load Balancing (GSLB) statistics. GSLB feature ensures that client requests are directed to a best performing site available in a global enterprise and distributed Internet environment.

NAME	DESCRIPTION
gslbdomain	Statistics for GSLB domain resource.
gslbservice	Statistics for GSLB service resource.
gslbservicegroup	Statistics for GSLB service group resource.
gslbservicegroupmember	Statistics for GSLB service group entity resource.
gslbsite	Statistics for GSLB site resource.
gslbvserver	Statistics for Global Server Load Balancing Virtual Server resource.

gslbdomain

Statistics for GSLB domain resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the GSLB domain for which to display statistics. If you do not specify a name, statistics are shown for all configured GSLB domains. Minimum length = 1
dnsrecordtype	<String>	Read-write	. Possible values = A, AAAA, CNAME, NAPTR
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
dnstotalqueries	<Double>	Read-only	Total number of DNS queries received.
dnsqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotalqueries
gslbdnsrectype	<String>	Read-only	Type of DNS record returned

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/gslbdomain **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/gslbdomain? **args=name: <String_value> ,dnsrecordtype: <String_value> ,dnsrecordtype: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get gslbdomain resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/gslbdomain? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

gslbservice

Statistics for GSLB service resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicename	<String>	Read-write	Name of the GSLB service. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
establishedconn	<Double>	Read-only	Number of client connections in ESTABLISHED state.
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
servicetype	<String>	Read-only	The service type of this service.Possible values are ADNS, DNS, MYSQL, RTSP, SSL_DIAMETER, ADNS_TCP, DNS_TCP, NNTP, SIP_UDP, SSL_TCP, ANY, FTP, RADIUS, SNMP, TCP, DHCPRA, HTTP, RDP, SSL, TFTP, DIAMETER, MSSQL, RPCSVR, SSL_BRIDGE, UDP
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Dow

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			n When going Out of Service)(8)
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
curload	<Double>	Read-only	Load on the service that is calculated from the bound load based monitor.
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.
vsvrservicehits	<Double>	Read-only	Number of times that the service has been provided.
vsvrservicehitsrate	<Double>	Read-only	Rate (/s) counter for vsvrservicehits
serviceorder	<Double>	Read-only	Order with which service is bound to vserver

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/gslbservicegroupmember **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/gslbservicegroupmember? **args= servicegroupname:<String_value>, ip: <String_value> ,servername: <String_value> , port:<Integer_value>, detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get gslbservicegroupmember resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/gslbservicegroupmember? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

gslbsite

Statistics for GSLB site resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sitename	<String>	Read-write	Name of the GSLB site for which to display detailed statistics. If a name is not specified, basic information about all GSLB sites is displayed. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sitepublicip	<String>	Read-only	The public IP address of this GSLB site.
siteip	<String>	Read-only	The private IP address of this GSLB site.
sitemepstatus	<String>	Read-only	Indicates the status of the Metric Exchange Policy at this GSLB site.
persexchange	<String>	Read-only	Indicates whether Persistence entries exchange is enabled or disabled at this GSLB site.
nwmetricexchange	<String>	Read-only	Indicates whether network metric exchange is enabled or disabled at this GSLB site.
sitemetricexchange	<String>	Read-only	Indicates whether metric exchange is enabled or disabled at this GSLB site.
sitetype	<String>	Read-only	Indicates whether this GSLB site is local or remote.
siteipstr	<String>	Read-only	The private IP address of this GSLB site.
sitepublicipstr	<String>	Read-only	The public IP address of this GSLB site.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sitemetricmepstatus	<String>	Read-only	Indicates the status of the site metric Metric Exchange connection at this GSLB site.
nwmetricmepstatus	<String>	Read-only	Indicates the status of the network metric Metric Exchange connection at this GSLB site.
sitetotalrequestbytes	<Double>	Read-only	Total number of request bytes received by the virtual servers represented by all GSLB services associated with this GSLB site.
siterequestbytesrate	<Double>	Read-only	Rate (/s) counter for sitetotalrequestbytes
sitetotalresponsebytes	<Double>	Read-only	Number of response bytes received by the virtual servers represented by all GSLB services associated with this GSLB site.
siteresponsebytesrate	<Double>	Read-only	Rate (/s) counter for sitetotalresponsebytes
sitetotalrequests	<Double>	Read-only	Total number of requests received by the virtual servers represented by all GSLB services

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			associated with this GSLB site.
siterequestsrate	<Double>	Read-only	Rate (/s) counter for sitetotalrequests
sitetotalresponses	<Double>	Read-only	Number of responses received by the virtual servers represented by all GSLB services associated with this GSLB site.
siteresponsesrate	<Double>	Read-only	Rate (/s) counter for sitetotalresponses
sitecurclntconnections	<Double>	Read-only	Number of current client connections to the virtual servers represented by all GSLB services associated with this GSLB site.
sitecursrvrconnections	<Double>	Read-only	Number of current connections to the real servers behind the virtual servers represented by all GSLB services associated with this GSLB site.

gslbvserver

Statistics for Global Server Load Balancing Virtual Server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the GSLB virtual server for which to display statistics. If you do not specify a name, statistics are displayed for all GSLB virtual servers. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
establishedconn	<Double>	Read-only	Number of client connections in ESTABLISHED state.
inactsvcs	<Double>	Read-only	number of INACTIVE services bound to a vserver
vslbhealth	<Double>	Read-only	Health of the vserver. This gives percentage of UP services bound to this vserver.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
actsvcs	<Double>	Read-only	number of ACTIVE services bound to a vserver
tothits	<Double>	Read-only	Total vserver hits
hitsrate	<Double>	Read-only	Rate (/s) counter for tothits
vsvrtotbkplbhits	<Double>	Read-only	Total backup LB method hits
vsvrtotbkplbfail	<Double>	Read-only	Total backup LB method fails
curpersistencesessions	<Double>	Read-only	current vserver owned persistence sessions
vsvrtotpersistencehits	<Double>	Read-only	Total number of Persistence hits at vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
sothreshold	<Double>	Read-only	Spill Over Threshold set on the VServer.
totspillovers	<Double>	Read-only	Number of times vserver experienced spill over.
totvserverdownbackuphits	<Double>	Read-only	Number of times traffic was diverted to backup vserver since primary vserver was DOWN.
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.

Operations

(click to see Properties)

ha

High Availability

High-availability commands.

NAME	DESCRIPTION
hanode	Statistics for node resource.

hanode

Statistics for node resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
hacurstatus	<String>	Read-only	Whether a Citrix ADC is configured for high availability. Possible values are YES and NO. If the value is NO, the high availability statistics below are invalid.
hacurstate	<String>	Read-only	State of the HA node, based on its health, in a high

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			availability setup. Possible values are: UP - Indicates that the node is accessible and can function as either a primary or secondary node. DISABLED - Indicates that the high availability status of the node has been manually disabled. Synchronization and propagation cannot take place between the peer nodes. INIT - Indicates that the node is in the process of becoming part of the high availability configuration. PARTIALFAIL - Indicates that one of the high availability monitored interfaces has failed because of a card or link failure. This state triggers a failover. COMPLETEFAIL - Indicates that all the interfaces of the node are unusable, because the interfaces on which high availability monitoring is enabled are not connected or are

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			manually disabled. This state triggers a failover. DUMB - Indicates that the node is in listening mode. It does not participate in high availability transitions or transfer configuration from the peer node. This is a configured value, not a statistic. PARTIALFAILSSL - Indicates that the SSL card has failed. This state triggers a failover. ROUTEMONITORFAIL - Indicates that the route monitor has failed. This state triggers a failover.
hacurmasterstate	<String>	Read-only	Indicates the high availability state of the node. Possible values are: STAYSECONDARY - Indicates that the selected node remains the secondary node in a high availability setup. In this case a forced failover does not change the state but, instead, returns an appropriate error message. This is a configured value and

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			not a statistic. PRIMARY - Indicates that the selected node is the primary node in a high availability setup. SECONDARY - Indicates that the selected node is the secondary node in a high availability setup. CLAIMING - Indicates that the secondary node is in the process of taking over as the primary node. This is the intermediate state in the transition of the secondary node to primary status. FORCE CHANGE - Indicates that the secondary node is forcibly changing its status to primary due to a forced failover issued on the secondary node.
transtime	<String>	Read-only	Time when the last master state transition occurred. You can use this statistic for debugging.
hatotpktrx	<Double>	Read-only	Number of heartbeat packets received from the peer node. Heartbeats are sent

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			at regular intervals (default is 200 milliseconds) to determine the state of the peer node.
hapktrxrate	<Double>	Read-only	Rate (/s) counter for hatotpktrx
hatotpkttx	<Double>	Read-only	Number of heartbeat packets sent to the peer node. Heartbeats are sent at regular intervals (default is 200 milliseconds) to determine the state of the peer node.
hapkttxrate	<Double>	Read-only	Rate (/s) counter for hatotpkttx
haerrproptimeout	<Double>	Read-only	Number of times propagation timed out.
haerrsyncfailure	<Double>	Read-only	Number of times the configuration of the primary and secondary nodes failed to synchronize since that last transition. A synchronization failure results in mismatched configuration. It can be caused by a mismatch in the Remote Procedural Call (RPC) password on the two nodes

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			forming the high availability pair.

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

ipsec

Ipsec

IPSEC statistics.

NAME	DESCRIPTION
ipseccounters	Statistics for counters resource.

ipseccounters

Statistics for counters resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
ipsectotrxbytes	<Double>	Read-only	Bytes received during IPsec sessions.
ipsecrxbytesrate	<Double>	Read-only	Rate (/s) counter for ipsectotrxbytes
ipsectottxbytes	<Double>	Read-only	Bytes sent during IPsec sessions.
ipsectxbytesrate	<Double>	Read-only	Rate (/s) counter for ipsectottxbytes
ipsectotrxpkts	<Double>	Read-only	Packets received during IPsec sessions.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ipsecrxpktsrate	<Double>	Read-only	Rate (/s) counter for ipsectotrxpkts
ipsectottxpkts	<Double>	Read-only	Packets sent during IPsec sessions.
ipsectxpktsrate	<Double>	Read-only	Rate (/s) counter for ipsectottxpkts

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/ipseccounters **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/ipseccounters? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get ipseccounters resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/ipseccounters? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "ipseccounters": [ {

"ipsectxbytesrate":<Double_value>,

"ipsectotrxpkts":<Double_value>,

"ipsectxpktsrate":<Double_value>,

lb

Load Balancing

Load Balancing statistics. The load balancing methods manage the selection of an appropriate physical server in a server farm.

NAME	DESCRIPTION
lbpolicy	Statistics for lb policy resource.
lbpolicylabel	Statistics for lb policy label resource.
lbvserver	Statistics for Load Balancing Virtual Server resource.

lbpolicy

Statistics for lb policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the LB policy for which to show detailed statistics. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pipolicyhits	<Double>	Read-only	Number of hits on the policy
pipolicyhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyhits
pipolicyundefhits	<Double>	Read-only	Number of undef hits on the policy
pipolicyundefhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyundefhits

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/lbpolicy **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/lbpolicy? **args=name: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get lbpolicy resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/lbpolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

lbvserver

Statistics for Load Balancing Virtual Server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the virtual server. If no name is provided, statistical data of all configured virtual servers is displayed. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = basic, full
sortby	<String>	Read-write	use this argument to sort by specific key. Possible values = Hits, CPU-PM
sortorder	<String>	Read-write	use this argument to specify sort order. Default value: SORT_DESCENDING Possible values = ascending, descending
avgcltttlb	<Double>	Read-only	Average TTLB between the client and the server. TTLB is the time interval between sending the request packet to a service and receiving the ACK for response from client.
cltresponsetimeapdex	<Double>	Read-only	Vserver APDEX index based on client response times.
vsvrsurgecount	<Double>	Read-only	Number of requests waiting on this vserver.
establishedconn	<Double>	Read-only	Number of client connections in ESTABLISHED state.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
inactsvcs	<Double>	Read-only	number of INACTIVE services bound to a vserver
vslbhealth	<Double>	Read-only	Health of the vserver. This gives percentage of UP services bound to this vserver.
primaryipaddress	<String>	Read-only	IP address of the vserver
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
actsvcs	<Double>	Read-only	number of ACTIVE services bound to a vserver
cpuusagepm	<Double>	Read-only	Vserver CPU usage in per-mille(parts per thousand)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tothits	<Double>	Read-only	Total vserver hits
hitsrate	<Double>	Read-only	Rate (/s) counter for tothits
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
totalh2requests	<Double>	Read-only	Total number of Http2 requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
h2requestsrate	<Double>	Read-only	Rate (/s) counter for totalh2requests
totalh2responses	<Double>	Read-only	Number of Http2 responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
h2responsesrate	<Double>	Read-only	Rate (/s) counter for totalh2responses
totalpktsrecvd	<Double>	Read-only	Total number of packets received by this service or virtual server.
pktsrecvdrate	<Double>	Read-only	Rate (/s) counter for totalpktsrecvd
totalpktssent	<Double>	Read-only	Total number of packets sent.
pktssentrate	<Double>	Read-only	Rate (/s) counter for totalpktssent

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.
curpersistencesessions	<Double>	Read-only	current vserver owned persistence sessions
curbackuppersistencesessions	<Double>	Read-only	current vserver owned backup persistence sessions
surgecount	<Double>	Read-only	Number of requests in the surge queue.
svcsurgecount	<Double>	Read-only	Total number of requests in the surge queues of all the services bound to this LB-vserver.
sothreshold	<Double>	Read-only	Spill Over Threshold set on the VServer.
totspillovers	<Double>	Read-only	Number of times vserver experienced spill over.
labelledconn	<Double>	Read-only	Number of Labeled connection on this vserver
pushlabel	<Double>	Read-only	Number of labels for this push vserver.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
deferredreq	<Double>	Read-only	Number of deferred request on this vserver
deferredreqrate	<Double>	Read-only	Rate (/s) counter for deferredreq
invalidrequestrespon se	<Double>	Read-only	Number invalid requests/responses on this vserver
invalidrequestrespon sedropped	<Double>	Read-only	Number invalid requests/responses dropped on this vserver
totvserverdownbacku phits	<Double>	Read-only	Number of times traffic was diverted to backup vserver since primary vserver was DOWN.
curmptcpsessions	<Double>	Read-only	Current Multipath TCP sessions
cursubflowconn	<Double>	Read-only	Current Multipath TCP subflows
totalconnreassembly queue75	<Double>	Read-only	Total no of connections with 75% TCP reassembly queue
totalconnreassembly queueflush	<Double>	Read-only	Total no of connections incurred TCP reassembly queue flush
totalsvrbusyerr	<Double>	Read-only	Total no of server busy error

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
svrbusyerrrate	<Double>	Read-only	Rate (/s) counter for totalsvrbusyerr
reqretrycount	<Double>	Read-only	Number of times request has been retried due to server failure.
reqretrycountexceeded	<Double>	Read-only	Number of times Maximum retry count threshold is exceeded and error returned to client.
httpmaxhdrszpkts	<Double>	Read-only	Number of http max header size packet parsing failures
httpmaxhdrfldlenpkts	<Double>	Read-only	Number of HTTP requests exceeding max header field length
tcpmaxooopkts	<Double>	Read-only	No of times max out of order packets reached
totclttlbtransactions	<Double>	Read-only	Total transactions where client TTLB is calculated.
toleratingttlbtransactions	<Double>	Read-only	Tolerable transactions based on APDEX threshold (>T ;; <4T).
frustratingttlbtransactions	<Double>	Read-only	Frustrating transactions based on APDEX threshold (>4T).

Operations

lldp

LLDP

Link Layer Discovery Protocol.

NAME	DESCRIPTION
lldp	Statistics for lldp.

lldp

Statistics for lldp.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ifnum	<String>	Read-write	LLDP Statistics per interfaces.
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
rxportframestotal	<Double>	Read-only	Total LLDP Packets received.
rxportframesrate	<Double>	Read-only	Rate (/s) counter for rxportframestotal
rxportbytestotal	<Double>	Read-only	Total LLDP bytes received
rxportbytesrate	<Double>	Read-only	Rate (/s) counter for rxportbytestotal
txportframestotal	<Double>	Read-only	Total LLDP Packets transmitted
txportframesrate	<Double>	Read-only	Rate (/s) counter for txportframestotal
txportbytestotal	<Double>	Read-only	Total LLDP bytes transmitted.
txportbytesrate	<Double>	Read-only	Rate (/s) counter for txportbytestotal
rxportframeserrors	<Double>	Read-only	Total errors in LLDP packets.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
rxportframeserrorsrate	<Double>	Read-only	Rate (/s) counter for rxportframeserrors
rxporttlvsdiscardedtotal	<Double>	Read-only	Total discarded LLDP packets.
rxporttlvsdiscardedrate	<Double>	Read-only	Rate (/s) counter for rxporttlvsdiscardedtotal
rxporttlvsunrecognizedtotal	<Double>	Read-only	Total TLVs not Recognised.
rxporttlvsunrecognizedrate	<Double>	Read-only	Rate (/s) counter for rxporttlvsunrecognizedtotal

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/lldp **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/lldp? **args=ifnum: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get lldp resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/lldp? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "lldp": [ {

"ifnum":<String_value>,
```

```

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/lsngroup **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/lsngroup? **args=groupname: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get lsngroup resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/lsngroup? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

NAME	DESCRIPTION
Interface	Statistics for interface resource.
bridge	Statistics for bridge resource.
inat	Statistics for inbound nat resource.
inatsession	Statistics for stateful INAT resource.
mapbmr	Statistics for MAP-T Basic Mapping rule resource.
mapdomain	Statistics for MAP-T Map Domain resource.
nat64	Statistics for nat64 config resource.
rnat	Statistics for RNAT configured route resource.
rnat6	Statistics for IPv6 RNAT configured route resource.
rnatip	Statistics for RNAT ipaddress resource.
tunnelip	Statistics for TUNNEL Remote ipaddress resource.
tunnelip6	Statistics for TUNNEL Remote ip6address resource.
vlan	Statistics for "VLAN" resource.

NAME	DESCRIPTION
vxlan	Statistics for "VXLAN" resource.

Interface

Statistics for interface resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
id	<String>	Read-write	Interface number, in C/U format, where C can take one of the following values: * 0 - Indicates a management interface. * 1 - Indicates a 1 Gbps port. * 10 - Indicates a 10 Gbps port. * LA - Indicates a link aggregation port. * LO - Indicates a loop back port. U is a unique integer for representing an interface in a particular port group.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
curintfstate	<String>	Read-only	Current state of the specified interface. The interface state set to UP only if the link state is UP and administrative state is ENABLED .
curlinkuptime	<String>	Read-only	Duration for which the link is UP. This statistic is reset when the state changes to DOWN.
curlinkdowntime	<String>	Read-only	Duration for which the link is DOWN. This statistic is reset when the state changes to UP.
totrxbytes	<Double>	Read-only	Number of bytes received by an interface since the Citrix ADC was started or the interface statistics were cleared.
rxbytesrate	<Double>	Read-only	Rate (/s) counter for totrxbytes
tottxbytes	<Double>	Read-only	Number of bytes transmitted by an interface since the Citrix ADC was started or the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			interface statistics were cleared.
txbytesrate	<Double>	Read-only	Rate (/s) counter for tottxbytes
totrxpkts	<Double>	Read-only	Number of packets received by an interface since the Citrix ADC was started or the interface statistics were cleared.
rxpktsrate	<Double>	Read-only	Rate (/s) counter for totrxpkts
tottxpkts	<Double>	Read-only	Number of packets transmitted by an interface since the Citrix ADC was started or the interface statistics were cleared.
txpktsrate	<Double>	Read-only	Rate (/s) counter for tottxpkts
jumbopktsreceived	<Double>	Read-only	Number of Jumbo Packets received on this interface.
jumbopktsreceivedrate	<Double>	Read-only	Rate (/s) counter for jumbopktsreceived
jumbopktstransmitted	<Double>	Read-only	Number of Jumbo packets transmitted on this interface by upper layer, with TSO enabled actual

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			trasmission size could be non Jumbo.
jumbopktstransmitted rate	<Double>	Read-only	Rate (/s) counter for jumbopktstransmitted
trunkpktsreceived	<Double>	Read-only	Number of Tagged Packets received on this Trunk interface through Allowed VLan List.
trunkpktsreceivedrate	<Double>	Read-only	Rate (/s) counter for trunkpktsreceived
trunkpktstransmitted	<Double>	Read-only	Number of Tagged Packets transmitted on this Trunk interface through Allowed VLan List.
trunkpktstransmittedrate	<Double>	Read-only	Rate (/s) counter for trunkpktstransmitted
nictotmulticastpkts	<Double>	Read-only	Number of multicast packets received by the specified interface since the Citrix ADC was started or the interface statistics were cleared.
nicmulticastpktsrate	<Double>	Read-only	Rate (/s) counter for nictotmulticastpkts
totnetscalerpkts	<Double>	Read-only	Number of packets, destined to the Citrix ADC, received by an interface since the Citrix ADC was

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			started or the interface statistics were cleared. The packets destined to Citrix ADC are those that have the same MAC address as that of an interface or a VMAC address owned by the Citrix ADC.
netscalerpktsrate	<Double>	Read-only	Rate (/s) counter for totnetscalerpkts
rxlacpdu	<Double>	Read-only	Number of Link Aggregation Control Protocol Data Units(LACPDUs) received by the specified interface since the Citrix ADC was started or the interface statistics were cleared.
rxlacpdurate	<Double>	Read-only	Rate (/s) counter for rxlacpdu
txlacpdu	<Double>	Read-only	Number of Link Aggregation Control Protocol Data Units(LACPDUs) transmitted by the specified interface since the Citrix ADC was started or the interface statistics were cleared.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
txlacpdurate	<Double>	Read-only	Rate (/s) counter for txlacpdu
errpktrx	<Double>	Read-only	Number of inbound packets dropped by the hardware on a specified interface once the Citrix ADC starts or the interface statistics are cleared. This happens due to following reasons: 1) The hardware receives packets at a rate higher rate than that at which the software is processing packets. In this case, the hardware FIFO overruns and starts dropping the packets . 2) The specified interface fails to receive inbound packets from the appliance because of insufficient memory. 3) The specified interface receives packets with CRC errors (Alignment or Frame Check Sequence). 4) The specified interface receives overly long packets. 5) The specified interface receives packets with alignment

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			errors. 6) The software does less buffering because it is running out of available memory. When hardware detects that there is no space into which to push newly arrived packets, it starts dropping them. 7) The specified interface receives packets with Frame Check Sequence (FCS) errors. 8) The specified interface receives packets smaller than 64 bytes. 9) The specified interface discards error-free inbound packets because of insufficient resources. For example: NIC buffers. 10) Packets are missed because of collision detection, link lost, physical decoding error, or MAC abort.
errpktrxrate	<Double>	Read-only	Rate (/s) counter for errpktrx
errpkttx	<Double>	Read-only	Number of outbound packets dropped by the hardware on a specified interface

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			since the Citrix ADC was started or the interface statistics were cleared. This could happen due to length (undersize or oversize) errors and lack of resources. This statistic is available only for: (1) Loop back interface (LO) of all platforms. (2) All data ports on the Citrix ADC 12000 platform. (3) Management ports on the MPX 15000 and 17000 platforms.
errpkttxrate	<Double>	Read-only	Rate (/s) counter for errpkttx
errifindiscards	<Double>	Read-only	Number of error-free inbound packets discarded by the specified interface due to a lack of resources, for example, insufficient receive buffers.
errifindiscardsrate	<Double>	Read-only	Rate (/s) counter for errifindiscards
nicerrifoutdiscards	<Double>	Read-only	Number of error-free outbound packets discarded by the specified interface due to a lack of resources. This statistic is not

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			available on: (1) 10G ports of Citrix ADC MPX 12500/12500/15500-10G platforms. (2) 10G data ports on Citrix ADC MPX 17500/19500/21500 platforms.
nicerrifoutdiscardsrate	<Double>	Read-only	Rate (/s) counter for nicerrifoutdiscards
errdroppedrxpkts	<Double>	Read-only	Number of inbound packets dropped by the specified interface. Commonly dropped packets are multicast frames, spanning tree BPDUs, packets destined to a MAC not owned by the Citrix ADC when L2 mode is disabled, or packets tagged for a VLAN that is not bound to the interface. This statistic will increment in most healthy networks at a steady rate regardless of traffic load. If a sharp spike in dropped packets occurs, it generally indicates an issue with connected L2 switches, such as a forwarding database

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			overflow resulting in packets being broadcast on all ports.
errdroppedrxpktsrate	<Double>	Read-only	Rate (/s) counter for errdroppedrxpkts
errdroppedtxpkts	<Double>	Read-only	Number of packets dropped in transmission by the specified interface due to one of the following reasons. (1) VLAN mismatch. (2) Oversized packets. (3) Interface congestion. (4) Loopback packets sent on non loop back interface.
errdroppedtxpktsrate	<Double>	Read-only	Rate (/s) counter for errdroppedtxpkts
errlinkhangs	<Double>	Read-only	Number of times the specified interface detected hangs in the transmit and receive paths since the Citrix ADC was started or the interface statistics were cleared.
nicstsstalls	<Double>	Read-only	Number of times the status updates for a specified interface were stalled since the Citrix ADC was started or the interface statistics

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			were cleared. A status stall is detected when the status of the interface is not updated by the NIC hardware within 0.8 seconds of the last update.
nictxstalls	<Double>	Read-only	Number of times the interface stalled, when transmitting packets, since the Citrix ADC was started or the interface statistics were cleared. Transmit (Tx) stalls are detected when a packet posted for transmission is not transmitted in 4 seconds.
nicrxstalls	<Double>	Read-only	Number of times the interface stalled, when receiving packets, since the Citrix ADC was started or the interface statistics were cleared. Receive (Rx) stalls are detected when the following conditions are met: (1)The link is up for more than 10 minutes. (2)Packets are transmitted, but

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			no packets is received for 16 seconds.
nicerrdisables	<Double>	Read-only	Number of times the specified interface is disabled by the Citrix ADC, due to continuous Receive (Rx) or Transmit (Tx) stalls, since the Citrix ADC was started or the interface statistics were cleared. The Citrix ADC disables an interface when one of the following conditions is met: (1) Three consecutive transmit stalls occurs with at most gap of 10 seconds between any two stalls. (2) Three consecutive receive stalls occurs with at most gap of 120 seconds between any two stalls.
linkreinits	<Double>	Read-only	Number of times the link has been re-initialized. A re-initialization occurs due to link state change, configuration parameter change, or administrative reset operation.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totmacmoved	<Double>	Read-only	Number of MAC moves between ports. If a high rate of MAC moves is observed, it is likely that there is a bridge loop between two interfaces.
macmovedrate	<Double>	Read-only	Rate (/s) counter for totmacmoved
errnicmuted	<Double>	Read-only	Number of times the specified interface stopped transmitting and receiving packets due to MAC moves between ports.
rxcrcerrors	<Double>	Read-only	Number of packets received with the wrong checksum by the specified interface since the Citrix ADC was started or the interface statistics were cleared. This indicates the number of Jabber frames received instead of CRC errors on the 10G data ports of Citrix ADC 12000-10G platform and the data ports of Citrix ADC MPX 15000 and 17000 platforms.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
rxcrcerrorsrate	<Double>	Read-only	Rate (/s) counter for rxcrcerrors
interfacealias	<String>	Read-only	Alias Name for the Interface
curlinkstate	<String>	Read-only	The current state of the link associated with the interface. For logical interfaces (LA), the state of the link is dependent on the state of the slave interfaces. For the link to be UP at least one of the slave interfaces needs to be UP.

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.
- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/Interface **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/Interface? **args=id: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get Interface resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/Interface? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/inatsession **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/inatsession? **args=name: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get inatsession resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/inatsession? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

tnltotrxpkts	<Double>	Read-only	Total number of packets received on the tunnel.
tnlrxpktsrate	<Double>	Read-only	Rate (/s) counter for tnltotrxpkts
tnltottxpkts	<Double>	Read-only	Total number of packets transmitted on the tunnel.
tnltxpktsrate	<Double>	Read-only	Rate (/s) counter for tnltottxpkts
tnltotrxbytes	<Double>	Read-only	Total number of bytes received on the tunnel.
tnlrxbytesrate	<Double>	Read-only	Rate (/s) counter for tnltotrxbytes
tnltottxbytes	<Double>	Read-only	Total number of bytes transmitted on the tunnel.
tnltxbytesrate	<Double>	Read-only	Rate (/s) counter for tnltottxbytes

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/tunnelip **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/tunnelip? **args=tunnelip: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get tunnelip resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/tunnelip? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "tunnelip": [ {

"tunnelip":<String_value>,

ns

NS

System/Global level statistics.

NAME	DESCRIPTION
ns	Statistics for ns.
nsacl	Statistics for ACL entry resource.
nsacl6	Statistics for ACL6 entry resource.
nslimitidentifier	Statistics for limit Identifier resource.
nsmemory	
nspartition	Statistics for admin partition resource.
nspbr	Statistics for Policy Based Routing(PBR) entry resource.
nspbr6	Statistics for PBR6 entry resource.
nssimpleacl	Statistics for simple ACL resource.
nssimpleacl6	Statistics for simple ACL6 resource.
nstrafficdomain	Statistics for Traffic Domain resource.

ns

Statistics for ns.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
rescpuusagepcnt	<Double>	Read-only	Average CPU utilization percentage. Not applicable for a single-CPU system.
cpuusagepcnt	<Double>	Read-only	CPU utilization percentage.
cachemaxmemorykb	<Double>	Read-only	Largest amount of memory the Citrix ADC can dedicate to caching, up to 50% of available memory. A 0 value disables caching, but the caching module continues to run.
delcmpratio	<Double>	Read-only	Ratio of compressible data received to compressed data transmitted.If this ratio is one (uncmp:1.0) that means compression is disabled or we are not able to compress

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			even a single compressible packet.
rescpuusage	<Double>	Read-only	Shows average CPU utilization percentage if more than 1 CPU is present.
cpuusage	<Double>	Read-only	CPU utilization percentage.
resmemusage	<Double>	Read-only	Percentage of memory utilization on Citrix ADC.
comptotaldatacompressionratio	<Double>	Read-only	Ratio of total HTTP data received to total HTTP data transmitted.
compratio	<Double>	Read-only	Ratio of the compressible data received from the server to the compressed data sent to the client.
cacheutilizedmemorykb	<Double>	Read-only	Amount of memory the integrated cache is currently using.
cachemaxmemoryactivekb	<Double>	Read-only	Currently active value of maximum memory
cache64maxmemorykb	<Double>	Read-only	Largest amount of memory the Citrix ADC can dedicate to caching, up to 50% of available memory. A 0 value disables caching, but the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			caching module continues to run.
cachepercentoriginbandwidthsaved	<Double>	Read-only	Percentage of origin bandwidth saved, expressed as number of bytes served from the integrated cache divided by all bytes served. The assumption is that all compression is done in the Citrix ADC.
cachetotmisses	<Double>	Read-only	Intercepted HTTP requests requiring fetches from origin server.
cachemissesrate	<Double>	Read-only	Rate (/s) counter for cachetotmisses
cachetothits	<Double>	Read-only	Responses served from the integrated cache. These responses match a policy with a CACHE action.
cachehitsrate	<Double>	Read-only	Rate (/s) counter for cachetothits
memusagepcnt	<Double>	Read-only	Percentage of memory utilization on Citrix ADC.
memuseinmb	<Double>	Read-only	Main memory currently in use, in megabytes.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mgmtcpuusagepcnt	<Double>	Read-only	Average Management CPU utilization percentage.
pktcpuusagepcnt	<Double>	Read-only	Average CPU utilization percentage for all packet engines excluding management PE.
starttimelocal	<String>	Read-only	Time (in local timezone format) when the Citrix ADC was last started.
starttime	<String>	Read-only	Time when the Citrix ADC was last started.
transtime	<String>	Read-only	Time when the last master state transition occurred. You can use this statistic for debugging.
hacurstate	<String>	Read-only	State of the HA node, based on its health, in a high availability setup. Possible values are: UP - Indicates that the node is accessible and can function as either a primary or secondary node. DISABLED - Indicates that the high availability status of the node

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			has been manually disabled. Synchronization and propagation cannot take place between the peer nodes. INIT - Indicates that the node is in the process of becoming part of the high availability configuration. PARTIALFAIL - Indicates that one of the high availability monitored interfaces has failed because of a card or link failure. This state triggers a failover. COMPLETEFAIL - Indicates that all the interfaces of the node are unusable, because the interfaces on which high availability monitoring is enabled are not connected or are manually disabled. This state triggers a failover. DUMB - Indicates that the node is in listening mode. It does not participate in high availability transitions or transfer configuration from the peer node. This

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			is a configured value, not a statistic. PARTIALFAILSSL - Indicates that the SSL card has failed. This state triggers a failover. ROUTEMONITORFAIL - Indicates that the route monitor has failed. This state triggers a failover.
hacurmasterstate	<String>	Read-only	Indicates the high availability state of the node. Possible values are: STAYSECONDARY - Indicates that the selected node remains the secondary node in a high availability setup. In this case a forced failover does not change the state but, instead, returns an appropriate error message. This is a configured value and not a statistic. PRIMARY - Indicates that the selected node is the primary node in a high availability setup. SECONDARY - Indicates that the selected node is the secondary node in a high availability

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			setup. CLAIMING - Indicates that the secondary node is in the process of taking over as the primary node. This is the intermediate state in the transition of the secondary node to primary status. FORCE CHANGE - Indicates that the secondary node is forcibly changing its status to primary due to a forced failover issued on the secondary node.
sslnumcardsup	<Double>	Read-only	Number of SSL cards that are UP. If the number of cards UP is lower than a threshold, a failover is initiated.
sslcards	<Double>	Read-only	Number of SSL crypto cards present on the Citrix ADC.
disk0perusage	<Double>	Read-only	Used space in /flash partition of the disk, as a percentage. This is a critical counter. You can configure /flash Used (%) by using the Set snmp alarm DISK-USAGE-HIGH command.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
disk1perusage	<Double>	Read-only	Used space in /var partition of the disk, as a percentage. This is a critical counter. You can configure /var Used (%) by using the Set snmp alarm DISK-USAGE-HIGH command.
disk0avail	<Double>	Read-only	Available space in /flash partition of the hard disk.
disk1avail	<Double>	Read-only	Available space in /var partition of the hard disk.
totrxmbits	<Double>	Read-only	Number of megabytes received by the Citrix ADC.
rxmbitsrate	<Double>	Read-only	Rate (/s) counter for totrxmbits
tottxmbits	<Double>	Read-only	Number of megabytes transmitted by the Citrix ADC.
txmbitsrate	<Double>	Read-only	Rate (/s) counter for tottxmbits
tcpcurclientconn	<Double>	Read-only	Client connections, including connections in the Opening, Established, and Closing state.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcpcurclientconnestablished	<Double>	Read-only	Current client connections in the Established state, which indicates that data transfer can occur between the Citrix ADC and the client.
tcpcurserverconn	<Double>	Read-only	Server connections, including connections in the Opening, Established, and Closing state.
tcpcurserverconnestablished	<Double>	Read-only	Current server connections in the Established state, which indicates that data transfer can occur between the Citrix ADC and the server.
httptotrequests	<Double>	Read-only	Total number of HTTP requests received.
httprequestsrate	<Double>	Read-only	Rate (/s) counter for httptotrequests
httptotresponses	<Double>	Read-only	Total number of HTTP responses sent.
httpresponsesrate	<Double>	Read-only	Rate (/s) counter for httptotresponses
httptotrxrequestbytes	<Double>	Read-only	Total number of bytes of HTTP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			request data received.
httprxrequestbytesrate	<Double>	Read-only	Rate (/s) counter for httptotrxrequestbytes
httptotrxresponsebytes	<Double>	Read-only	Total number of bytes of HTTP response data received.
httprxresponsebytesrate	<Double>	Read-only	Rate (/s) counter for httptotrxresponsebytes
ssltottransactions	<Double>	Read-only	Number of SSL transactions on the Citrix ADC
ssltransactionsrate	<Double>	Read-only	Rate (/s) counter for ssltottransactions
ssltotsessionhits	<Double>	Read-only	Number of SSL session reuse hits on the Citrix ADC.
sslsessionhitsrate	<Double>	Read-only	Rate (/s) counter for ssltotsessionhits
appfirewallrequests	<Double>	Read-only	HTTP/HTTPS requests sent to your protected web servers via the Application Firewall.
appfirewallrequestsrate	<Double>	Read-only	Rate (/s) counter for appfirewallrequests
appfirewallresponses	<Double>	Read-only	HTTP/HTTPS responses sent by your protected web

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			servers via the Application Firewall.
appfirewallresponses rate	<Double>	Read-only	Rate (/s) counter for appfirewallresponses
appfirewallaborts	<Double>	Read-only	Incomplete HTTP/ HTTPS requests aborted by the client before the Application Firewall could finish processing them.
appfirewallabortsrate	<Double>	Read-only	Rate (/s) counter for appfirewallaborts
appfirewallredirects	<Double>	Read-only	HTTP/HTTPS requests redirected by the Application Firewall to a different Web page or web server. (HTTP 302)
appfirewallredirectsr ate	<Double>	Read-only	Rate (/s) counter for appfirewallredirects
enainbwlimitexceede d	<Double>	Read-only	Inbound BW Limits Exceeded
enainbwlimitexceede drate	<Double>	Read-only	Rate (/s) counter for enainbwlimitexceede d
enaoutbwlimitexceed ed	<Double>	Read-only	Outbound BW Limits Exceeded
enaoutbwlimitexceed edrate	<Double>	Read-only	Rate (/s) counter for enaoutbwlimitexceed ed

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
enappslimitexceeded	<Double>	Read-only	PPS Limits Exceeded
enappslimitexceeded rate	<Double>	Read-only	Rate (/s) counter for enappslimitexceeded
enaconntracklimitexceeded	<Double>	Read-only	Conn-Tracking Limits Exceeded
enaconntracklimitexceededrate	<Double>	Read-only	Rate (/s) counter for enaconntracklimitexceeded
enalinklocallimitexceeded	<Double>	Read-only	Link-Local Limits Exceeded
enalinklocallimitexceededrate	<Double>	Read-only	Rate (/s) counter for enalinklocallimitexceeded
enaconntracklimitavailable	<Double>	Read-only	Conn-Tracking Limits Available
enaconntracklimitavailablerate	<Double>	Read-only	Rate (/s) counter for enaconntracklimitavailable
misccounter0	<Double>	Read-only	Miscellaneous Counter 0.
misccounter1	<Double>	Read-only	Miscellaneous Counter 1.
numcpus	<Double>	Read-only	The number of CPUs on the Citrix ADC.

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/ns **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/ns? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get ns resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/ns? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

Note: To retrieve rate counters using attrs option, please provide parent counter name in attrs. e.g., to get "rxmbitsrate" attribute in the STAT response, attrs should be "totrxmbits"

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

nsacl

Statistics for ACL entry resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
aclname	<String>	Read-write	Name of the extended ACL rule whose statistics you want the Citrix ADC to display. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
acltotpktsbridged	<Double>	Read-only	Packets matching a bridge ACL, which is in transparent mode and bypasses service processing.
aclpktsbridgedrate	<Double>	Read-only	Rate (/s) counter for acltotpktsbridged
acltotpktsdenied	<Double>	Read-only	Packets dropped because they match ACLs with processing mode set to DENY.
aclpktsdeniedrate	<Double>	Read-only	Rate (/s) counter for acltotpktsdenied
acltotpktsallowed	<Double>	Read-only	Packets matching ACLs with processing mode set to ALLOW. Citrix ADC processes these packets.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
aclpktsallowedrate	<Double>	Read-only	Rate (/s) counter for acltotpktsallowed
acltotpktsnat	<Double>	Read-only	Packets matching a NAT ACL, resulting in a NAT session.
aclpktsnatrate	<Double>	Read-only	Rate (/s) counter for acltotpktsnat
acltothits	<Double>	Read-only	Packets matching an ACL.
aclhitsrate	<Double>	Read-only	Rate (/s) counter for acltothits
acltotmisses	<Double>	Read-only	Packets not matching any ACL.
aclmissesrate	<Double>	Read-only	Rate (/s) counter for acltotmisses
acltotcount	<Double>	Read-only	Total number of ACL rules configured.
effectiveacltotcount	<Double>	Read-only	Total number of Effective ACL rules configured.
dfdacltothits	<Double>	Read-only	Packets matching an dfd ACL.
dfdaclhitsrate	<Double>	Read-only	Rate (/s) counter for dfdacltothits
dfdacltotmisses	<Double>	Read-only	Packets not matching any DFD ACL.
dfdaclmissesrate	<Double>	Read-only	Rate (/s) counter for dfdacltotmisses

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dfdacltotcount	<Double>	Read-only	Total number of DFD ACL rules configured.
aclperhits	<Double>	Read-only	Number of times the acl was hit
aclperhitsrate	<Double>	Read-only	Rate (/s) counter for aclperhits

Operations

nspartition

Statistics for admin partition resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
partitionname	<String>	Read-write	Name of the partition. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
maxbandwidth	<Double>	Read-only	Maximum Banwidth allowed for the partition.
maxconnection	<Double>	Read-only	Maximum Connection allowed for the partition.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
maxmemory	<Double>	Read-only	Maximum memory limit for the partition.
currentbandwidth	<Double>	Read-only	Current Bandwidth usage for the partition.
currentconnections	<Double>	Read-only	Current Connections on this partition.
memoryusagepcnt	<Double>	Read-only	Memory usage(%) on this partition.
totaldrops	<Double>	Read-only	Total packet drops for the partition.
dropsrate	<Double>	Read-only	Rate (/s) counter for totaldrops
totaltokendrops	<Double>	Read-only	Total drops(KB) for the partition.
tokendropsrate	<Double>	Read-only	Rate (/s) counter for totaltokendrops
totalconnectiondrops	<Double>	Read-only	Total connection drops for the partition.
connectiondropsrate	<Double>	Read-only	Rate (/s) counter for totalconnectiondrops

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/nspartition **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/nspartition? **args=partitionname: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get nspartition resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/nspartition? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

pcptotnoexternal	<Double>	Read-only	Total responses with opcode can not provide external.
pcpnoexternalrate	<Double>	Read-only	Rate (/s) counter for pcptotnoexternal
pcptotaddrmismatch	<Double>	Read-only	Total address mismatch.
pcpaddrmismatchrate	<Double>	Read-only	Rate (/s) counter for pcptotaddrmismatch
pcptotexcesspeers	<Double>	Read-only	Total responses with opcode excessive remote peers.
pcpexcesspeersrate	<Double>	Read-only	Rate (/s) counter for pcptotexcesspeers

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

httptotrxresponsebytes	<Double>	Read-only	Total number of bytes of HTTP response data received.
httprxresponsebytesrate	<Double>	Read-only	Rate (/s) counter for httptotrxresponsebytes
httptotgets	<Double>	Read-only	Total number of HTTP requests received with the GET method.
httpgetsrate	<Double>	Read-only	Rate (/s) counter for httptotgets
httptotposts	<Double>	Read-only	Total number of HTTP requests received with the POST method.
httppostsrate	<Double>	Read-only	Rate (/s) counter for httptotposts
httptotothers	<Double>	Read-only	Total number of HTTP requests received with methods other than GET and POST. Some of the other well-defined HTTP methods are HEAD,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			PUT, DELETE, OPTIONS, and TRACE. User-defined methods are also allowed.
httptohersrate	<Double>	Read-only	Rate (/s) counter for httptotothers
httptot10requests	<Double>	Read-only	Total number of HTTP/1.0 requests received.
http10requestsrate	<Double>	Read-only	Rate (/s) counter for httptot10requests
httptot11requests	<Double>	Read-only	Total number of HTTP/1.1 requests received.
http11requestsrate	<Double>	Read-only	Rate (/s) counter for httptot11requests
httptotclenrequests	<Double>	Read-only	Total number of HTTP requests in which the Content-length field of the HTTP header has been set. Content-length specifies the length of the content, in bytes, in the associated HTTP body.
httpclenrequestsrate	<Double>	Read-only	Rate (/s) counter for httptotclenrequests
httptotchunkedrequests	<Double>	Read-only	Total number of HTTP requests in which the Transfer-Encoding field of the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			HTTP header has been set to chunked.
httpchunkedrequestsrate	<Double>	Read-only	Rate (/s) counter for httptotchunkedrequests
httptottxrequestbytes	<Double>	Read-only	Total number of bytes of HTTP request data transmitted.
httptxrequestbytesrate	<Double>	Read-only	Rate (/s) counter for httptottxrequestbytes
httptot10responses	<Double>	Read-only	Total number of HTTP/1.0 responses sent.
http10responsesrate	<Double>	Read-only	Rate (/s) counter for httptot10responses
httptot11responses	<Double>	Read-only	Total number of HTTP/1.1 responses sent.
http11responsesrate	<Double>	Read-only	Rate (/s) counter for httptot11responses
httptotclenresponses	<Double>	Read-only	Total number of HTTP responses sent in which the Content-length field of the HTTP header has been set. Content-length specifies the length of the content, in bytes, in the associated HTTP body.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httpclenresponsesrate	<Double>	Read-only	Rate (/s) counter for httptotclenresponses
httptotchunkedresponses	<Double>	Read-only	Total number of HTTP responses sent in which the Transfer-Encoding field of the HTTP header has been set to chunked. This setting is used when the server wants to start sending the response before knowing its total length. The server breaks the response into chunks and sends them in sequence, inserting the length of each chunk before the actual data. The message ends with a chunk of size zero.
httpchunkedresponsesrate	<Double>	Read-only	Rate (/s) counter for httptotchunkedresponses
httperrnoreusemultipart	<Double>	Read-only	Total number of HTTP multi-part responses sent. In multi-part responses, one or more entities are encapsulated within the body of a single message.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httperrnoreusemultipartrate	<Double>	Read-only	Rate (/s) counter for httperrnoreusemultipart
httptotnoclenchunkresponses	<Double>	Read-only	Total number of FIN-terminated responses sent. In FIN-terminated responses, the server finishes sending the data and closes the connection.
httpnoclenchunkresponsesrate	<Double>	Read-only	Rate (/s) counter for httptotnoclenchunkresponses
httptottxresponsebytes	<Double>	Read-only	Total number of bytes of HTTP response data transmitted.
httptxresponsebytesrate	<Double>	Read-only	Rate (/s) counter for httptottxresponsebytes
httperrincompleteheaders	<Double>	Read-only	Total number of HTTP requests and responses received in which the HTTP header spans more than one packet.
httperrincompletereq uests	<Double>	Read-only	Total number of HTTP requests received in which the header spans more than one packet.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httperrincompletereq uestsrate	<Double>	Read-only	Rate (/s) counter for httperrincompletereq uests
httperrincompleteres ponses	<Double>	Read-only	Total number of HTTP responses received in which the header spans more than one packet.
httperrincompleteres ponsesrate	<Double>	Read-only	Rate (/s) counter for httperrincompleteres ponses
httperrserverbusy	<Double>	Read-only	Total number of HTTP error responses received. Some of the error responses are: 500 Internal Server Error 501 Not Implemented 502 Bad Gateway 503 Service Unavailable 504 Gateway Timeout 505 HTTP Version Not Supported
httperrserverbusyrat e	<Double>	Read-only	Rate (/s) counter for httperrserverbusy
httperrlargecontent	<Double>	Read-only	Total number of requests and responses received with large body.
httperrlargechunk	<Double>	Read-only	Total number of requests received with large chunk size, in which the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Transfer-Encoding field of the HTTP header has been set to chunked.
httperrlargectlen	<Double>	Read-only	Total number of requests received with large content, in which the Content-length field of the HTTP header has been set. Content-length specifies the length of the content, in bytes, in the associated HTTP body.
httperrrfc7230desyncctlente	<Double>	Read-only	Total number of requests/responses received with both content-length and transfer encoding headers - RFC7230 Non-compliance
httperrrfc7230desynmultictlen	<Double>	Read-only	Total number of request/response received with multiple content-length headers with different values - RFC7230 Non-compliance
httperrrfc7230desynidenticalctlen	<Double>	Read-only	Total number of request/response received with duplicate content-length headers -

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			RFC7230 Non-compliance
httperrinvalidhostheader	<Double>	Read-only	Total number of request received with invalid host header

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/protocolhttp2 **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/protocolhttp2? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get protocolhttp2 resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/protocolhttp2? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

protocolicmp

Statistics for icmp resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
icmptotrxpkts	<Double>	Read-only	ICMP packets received.
icmprxpktsrate	<Double>	Read-only	Rate (/s) counter for icmptotrxpkts
icmptotrxbytes	<Double>	Read-only	Bytes of ICMP data received.
icmprxbytesrate	<Double>	Read-only	Rate (/s) counter for icmptotrxbytes
icmptottxpkts	<Double>	Read-only	ICMP packets transmitted.
icmptxpktsrate	<Double>	Read-only	Rate (/s) counter for icmptottxpkts
icmptottxbytes	<Double>	Read-only	Bytes of ICMP data transmitted.
icmptxbytesrate	<Double>	Read-only	Rate (/s) counter for icmptottxbytes
icmptotrxechoreply	<Double>	Read-only	ICMP Ping echo replies received.
icmprxechoreplyrate	<Double>	Read-only	Rate (/s) counter for icmptotrxechoreply
icmptottxechoreply	<Double>	Read-only	ICMP Ping echo replies transmitted.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
icmptxechoreplyrate	<Double>	Read-only	Rate (/s) counter for icmptottxechoreply
icmptotrxecho	<Double>	Read-only	ICMP Ping Echo Request and Echo Reply packets received.
icmprxechorate	<Double>	Read-only	Rate (/s) counter for icmptotrxecho
icmptotdstiplookup	<Double>	Read-only	Total number of MTU lookup on destination IP info received on a need fragmentation ICMP error message failed.
icmpcurratethreshold	<Double>	Read-only	Limit for ICMP packets handled every 10 milliseconds. Default value, 0, applies no limit. This is a configurable value using the set rateControl command.
icmptotportunreachablerx	<Double>	Read-only	ICMP Port Unreachable error messages received. This error is generated when there is no service is running on the port.
icmptotportunreachabletx	<Double>	Read-only	ICMP Port Unreachable error messages generated. This error

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			is generated when there is no service is running on the port.
icmptotneedfragrx	<Double>	Read-only	ICMP Fragmentation Needed error messages received for packets that need to be fragmented but for which Don't Fragment is specified the header.
icmptotthresholdexceeds	<Double>	Read-only	Times the ICMP rate threshold is exceeded. If this counter continuously increases, first make sure the ICMP packets received are genuine. If they are, increase the current rate threshold.
icmptotpktsdropped	<Double>	Read-only	ICMP packets dropped because the rate threshold has been exceeded.
icmptotbadchecksum	<Double>	Read-only	ICMP Fragmentation Needed error messages received with an ICMP checksum error.
icmptotnonfirstipfrag	<Double>	Read-only	ICMP Fragmentation Needed error messages received that were generated by an IP fragment

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			other than the first one.
icmptotinvalidbodylen	<Double>	Read-only	ICMP Fragmentation Needed error messages received that specified an invalid body length.
icmptotnotcpconn	<Double>	Read-only	ICMP Need Fragmentation error messages received for TCP packets. The state of the connection for these packets is not maintained on the Citrix ADC.
icmptotnoudpconn	<Double>	Read-only	ICMP Need Fragmentation error messages received for UDP packets. The state of the connection for these packets is not maintained on the Citrix ADC.
icmptotinvalidtcpseqno	<Double>	Read-only	ICMP Fragmentation Needed error messages received for packets that contain an invalid TCP address.
icmptotinvalidnextmtuval	<Double>	Read-only	ICMP Fragmentation Needed error messages received in which the Maximum Transmission Unit

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			(MTU) for the next hop is out of range. The range for the MTU is 576-1500.
icmptotbignextmtu	<Double>	Read-only	ICMP Fragmentation Needed error messages received in which the value for the next MTU is higher than that of the current MTU.
icmptotinvalidprotocol	<Double>	Read-only	ICMP Fragmentation Needed error messages received that contain a protocol other than TCP and UDP.
icmptotbadpmtuipchecksum	<Double>	Read-only	ICMP Fragmentation Needed error messages received with an IP checksum error.
icmptotpmtunolink	<Double>	Read-only	ICMP Fragmentation Needed error messages received on a Protocol Control Block (PCB) with no link. The PCB maintains the state of the connection.
icmptotpmtudiscoverydisabled	<Double>	Read-only	ICMP Need Fragmentation error messages received when the PMTU Discovery mode is not enabled.

icmpv6totrxna	<Double>	Read-only	ICMPv6 neighbor advertisement packets received. These packets are received in response to a neighbor solicitation message sent out by this node, or if the link layer address of a neighbor has changed.
icmpv6rxnarate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxna
icmpv6totrxns	<Double>	Read-only	ICMPv6 neighbor solicitation packets received. These packets are received if the link layer address of a neighbor has changed, or in response to a neighbor solicitation message sent out by this node.
icmpv6rxnsrate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxns
icmpv6totrxra	<Double>	Read-only	ICMPv6 router advertisement packets received. These are received at defined intervals or in response to a router solicitation message.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
icmpv6rxrarate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxra
icmpv6totrxrs	<Double>	Read-only	ICMPv6 router solicitation packets received. These could be sent by a neighboring router to initiate address resolution.
icmpv6rxrsrate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxrs
icmpv6totrxechoreq	<Double>	Read-only	ICMPv6 Ping Echo Request packets received.
icmpv6rxechoreqrate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxechoreq
icmpv6totrxechoreply	<Double>	Read-only	ICMPv6 Ping Echo Reply packets received.
icmpv6rxechoreplyrate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxechoreply
icmpv6tottxna	<Double>	Read-only	ICMPv6 neighbor advertisement packets transmitted. These packets are sent in response to a neighbor solicitation packet, or if the link layer address of this node has changed.
icmpv6txnarate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxna

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
icmpv6tottxns	<Double>	Read-only	ICMPv6 neighbor solicitation packets transmitted. These packets are sent to get the link layer addresses of neighboring nodes or to confirm that they are reachable.
icmpv6txnsrate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxns
icmpv6tottxra	<Double>	Read-only	ICMPv6 router advertisement packets transmitted. These packets are sent at regular intervals or in response to a router solicitation packet from a neighbor.
icmpv6txrarate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxra
icmpv6tottxrs	<Double>	Read-only	ICMPv6 router solicitation packets transmitted. These packets are sent to request neighboring routers to generate router advertisements immediately rather than wait for the next defined time.
icmpv6txrsrate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxrs

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
icmpv6tottxechoreq	<Double>	Read-only	ICMPv6 Ping Echo Request packets transmitted.
icmpv6txechoreqrate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxechoreq
icmpv6tottxechoreply	<Double>	Read-only	ICMP Ping Echo Reply packets transmitted.
icmpv6txechoreplyrate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxechoreply
icmpv6errra	<Double>	Read-only	ICMPv6 router advertisement error packets received that contain an error in the header, such as an incorrect source IP address, destination IP address, or packet length.
icmpv6errna	<Double>	Read-only	ICMPv6 neighbor advertisement error packets received that contain an error in the header, such as an incorrect source IP address, destination IP address, or packet length.
icmpv6errns	<Double>	Read-only	ICMPv6 neighbor solicitation error packets received that contain an error in the header, such as

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			an incorrect source IP address, destination IP address, or packet length.
icmpv6badchecksums	<Double>	Read-only	Packets received with an ICMPv6 checksum error.
icmpv6unspt	<Double>	Read-only	ICMPv6 packets received that are not supported by the Citrix ADC.
icmpv6rtthsld	<Double>	Read-only	Packets dropped because the default threshold of 100 requests per 10 milliseconds has been exceeded. This is a configurable value using the set rateControl command.

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/protocolicmpv6 **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/protocolicmpv6? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get protocolicmpv6 resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/protocolicmpv6? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
iptotrxpkts	<Double>	Read-only	IP packets received.
iprxpktsrate	<Double>	Read-only	Rate (/s) counter for iptotrxpkts
iptotrxbytes	<Double>	Read-only	Bytes of IP data received.
iprxbytesrate	<Double>	Read-only	Rate (/s) counter for iptotrxbytes
iptottxpkts	<Double>	Read-only	IP packets transmitted.
iptxpktsrate	<Double>	Read-only	Rate (/s) counter for iptottxpkts
iptottxbytes	<Double>	Read-only	Bytes of IP data transmitted.
iptxbytesrate	<Double>	Read-only	Rate (/s) counter for iptottxbytes
iptotrxmbits	<Double>	Read-only	Megabits of IP data received.
iprxmbitsrate	<Double>	Read-only	Rate (/s) counter for iptotrxmbits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
iptottxmbits	<Double>	Read-only	Megabits of IP data transmitted.
iptxmbitsrate	<Double>	Read-only	Rate (/s) counter for iptottxmbits
iptotroutedpkts	<Double>	Read-only	Total routed packets.
iproutedpktsrate	<Double>	Read-only	Rate (/s) counter for iptotroutedpkts
iptotroutedmbits	<Double>	Read-only	Total routed Mbits
iproutedmbitsrate	<Double>	Read-only	Rate (/s) counter for iptotroutedmbits
iptotroutedbytes	<Double>	Read-only	Total routed IP bytes.
iproutedbytesrate	<Double>	Read-only	Rate (/s) counter for iptotroutedbytes
iptotfragments	<Double>	Read-only	IP fragments received.
iptotsuccreassembly	<Double>	Read-only	Fragmented IP packets successfully reassembled on the Citrix ADC.
iptotreassemblyattempt	<Double>	Read-only	IP packets that the Citrix ADC attempts to reassemble. If one of the fragments is missing, the whole packet is dropped.
iptotaddrlookup	<Double>	Read-only	IP address lookups performed by the Citrix ADC. When a packet is received on a non-established session, the Citrix

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ADC checks if the destination IP address is one of the Citrix ADC owned IP addresses.
iptotaddrlookupfail	<Double>	Read-only	IP address lookups performed by the Citrix ADC that have failed because the destination IP address of the packet does not match any of the Citrix ADC owned IP addresses.
iptotudpfragmentsfwd	<Double>	Read-only	UDP fragments forwarded to the client or the server.
iptottcpfragmentsfwd	<Double>	Read-only	TCP fragments forwarded to the client or the server.
iptotfragpktsgen	<Double>	Read-only	Fragmented packets created by the Citrix ADC.
iptotbadchecksums	<Double>	Read-only	Packets received with an IP checksum error.
iptotunsuccreassembly	<Double>	Read-only	Packets received that could not be reassembled. This can occur when there is a checksum failure, an identification field mismatch, or when

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			one of the fragments is missing.
iptottoobig	<Double>	Read-only	Packets received for which the reassembled data exceeds the Ethernet packet data length of 1500 bytes.
iptotzerofragmentlen	<Double>	Read-only	Packets received with a fragment length of 0 bytes.
iptotdupfragments	<Double>	Read-only	Duplicate IP fragments received. This can occur when the acknowledgement was not received within the expected time.
iptotoutoforderfrag	<Double>	Read-only	Fragments received that are out of order.
iptotunknowndstrcvd	<Double>	Read-only	Packets received in which the destination IP address was not reachable or not owned by the Citrix ADC.
iptotbadtransport	<Double>	Read-only	Packets received in which the protocol specified in the IP header is unknown to the Citrix ADC.
iptotvipdown	<Double>	Read-only	Packets received for which the VIP is down. This can occur

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			when all the services bound to the VIP are down or the VIP is manually disabled.
iptotfixheaderfail	<Double>	Read-only	Packets received that contain an error in one or more components of the IP header.
iptotttlexpired	<Double>	Read-only	Packets for which the time-to-live (TTL) expired during transit. These packets are dropped.
iptotmaxclients	<Double>	Read-only	Attempts to open a new connection to a service for which the maximum limit has been exceeded. Default value, 0, applies no limit.
iptotunknownsvcs	<Double>	Read-only	Packets received on a port or service that is not configured.
iptotlandattacks	<Double>	Read-only	Land-attack packets received. The source and destination addresses are the same.
iptotinvalidheadersz	<Double>	Read-only	Packets received in which an invalid data length is specified, or the value in the length field and the actual data length do not match. The

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			range for the Ethernet packet data length is 0-1500 bytes.
iptotinvalidpacketsize	<Double>	Read-only	Total number of packets received by Citrix ADC with invalid IP packet size.
iptottruncatedpackets	<Double>	Read-only	Truncated IP packets received. An overflow in the routers along the path can truncate IP packets.
noniptottruncatedpackets	<Double>	Read-only	Truncated non-IP packets received.
iptotzeronexthop	<Double>	Read-only	Packets received that contain a 0 value in the next hop field. These packets are dropped.
iptotbadlens	<Double>	Read-only	Packets received with a length greater than the normal maximum transmission unit of 1514 bytes.
iptotbadmacaddrs	<Double>	Read-only	IP packets transmitted with a bad MAC address.

protocolmptcp

Statistics for mptcp protocol resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = basic, full
mptcptotmpcapsession	<Double>	Read-only	MPTCP total sessions created
mptcpmpcapsessionrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapsession
mptcptotv1mpcapsession	<Double>	Read-only	MPTCP total V1 sessions created
mptcpv1mpcapsessionrate	<Double>	Read-only	Rate (/s) counter for mptcptotv1mpcapsession
mptcptotsfconn	<Double>	Read-only	MPTCP total Subflow connections created
mptcpsfconnrate	<Double>	Read-only	Rate (/s) counter for mptcptotsfconn
mptcpcurmpcapablesessions	<Double>	Read-only	The number of current mptcp sessions.
mptcpcurv1mpcapablesessions	<Double>	Read-only	The number of current V1 mptcp sessions.
mptcpcursfconnections	<Double>	Read-only	The number of current mptcp subflow connections.
mptcpcurpendingjoin	<Double>	Read-only	The number of current mptcp subflow connections in pending state.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcpcursesswithoutsfs	<Double>	Read-only	Current Multipath TCP sessions without any subflows
mptcptotmpcapsyn	<Double>	Read-only	MPTCP total MP_CAPABLE received
mptcpmpcapsynrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapsyn
mptcptotv1mpcapsyn	<Double>	Read-only	MPTCP total Version1 MP_CAPABLE received
mptcpv1mpcapsynrate	<Double>	Read-only	Rate (/s) counter for mptcptotv1mpcapsyn
mptcptotmpcapsteered	<Double>	Read-only	Total MP_CAPABLE sessions steered
mptcpmpcapsteeredrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapsteered
mptcptotconnest	<Double>	Read-only	Total MP_CAPABLE sessions created.
mptcpconnestrate	<Double>	Read-only	Rate (/s) counter for mptcptotconnest
mptcptotmpcapsynacksent	<Double>	Read-only	Total number of MP_CAPABLE SYN/ACKs sent.
mptcpmpcapsynacksentrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapsynacksent

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcptotmpcapfackrecvd	<Double>	Read-only	Total number of MP_CAPABLE Final ACKs received.
mptcpmpcapfackrecvdrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapfackrecvd
mptcptotmpjoinsyn	<Double>	Read-only	MPTCP total MP_JOIN syn received
mptcpmpjoinsynrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpjoinsyn
mptcptotmpjoinsteered	<Double>	Read-only	Total MP_JOIN subflows steered
mptcpmpjoinsteeredrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpjoinsteered
mptcptotmpjoinsynacksent	<Double>	Read-only	Total MP_JOIN SYN/ACKs sent.
mptcpmpjoinsynacksentrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpjoinsynacksent
mptcptotmpjoinfackrecvd	<Double>	Read-only	Total number of MP_JOIN Final ACKs
mptcpmpjoinfackrecvdrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpjoinfackrecvd
mptcptotmpjoin4thacksent	<Double>	Read-only	Total number of Subflow final ACK from peer in 3 way

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			handshake validated with 4th ACK.
mptcpmpjoin4thacksentrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpjoin4thacksent
mptcptotestsfreplaced	<Double>	Read-only	MPTCP Total established subflows replaced due to new MP_JOIN.
mptcpestsfreplacedrate	<Double>	Read-only	Rate (/s) counter for mptcptotestsfreplaced
mptcptotpendsfreplaced	<Double>	Read-only	MPTCP Total pending subflows replaced due to new MP_JOIN.
mptcppendsfreplacedrate	<Double>	Read-only	Rate (/s) counter for mptcptotpendsfreplaced
mptcptotfreshackfrwd	<Double>	Read-only	Fresh ACK recieved on a subflow
mptcpfreshackfrwdrate	<Double>	Read-only	Rate (/s) counter for mptcptotfreshackfrwd
mptcpplainackfallback	<Double>	Read-only	MPTCP Fallback to regular tcp on receiving plain ACK for DSS.
mptcpplainackfallbackrate	<Double>	Read-only	Rate (/s) counter for mptcpplainackfallback

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcpinfinitemaprecvd	<Double>	Read-only	MPTCP Received and set infinite map and fallen back to regular TCP.
mptcpinfinitemaprecvdrate	<Double>	Read-only	Rate (/s) counter for mptcpinfinitemaprecvd
mptcptotaddrremoved	<Double>	Read-only	Total number of addresses removed from MPTCP connection with REMOVE_ADDR option
mptcpaddrremovedrate	<Double>	Read-only	Rate (/s) counter for mptcptotaddrremoved
mptcptotdss	<Double>	Read-only	Total number of Data Sequence Signal packets.
mptcpdssrate	<Double>	Read-only	Rate (/s) counter for mptcptotdss
mptcptotrxdss	<Double>	Read-only	MPTCP Total Data Sequence Signal packets received.
mptcprxdssrate	<Double>	Read-only	Rate (/s) counter for mptcptotrxdss
mptcptottxdss	<Double>	Read-only	MMPTCP Total Data Sequence Signal packets sent
mptcptxdssrate	<Double>	Read-only	Rate (/s) counter for mptcptottxdss

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcptotdssa	<Double>	Read-only	Total Data Sequence Signal packets during data transfer with DATA_ACK
mptcpdssarate	<Double>	Read-only	Rate (/s) counter for mptcptotdssa
mptcptotdssfreshack	<Double>	Read-only	MPTCP total Data Sequence Signal packets during data transfer with fresh ACK
mptcpdssfreshackrate	<Double>	Read-only	Rate (/s) counter for mptcptotdssfreshack
mptcptotdssm	<Double>	Read-only	MPTCP total data Sequence Signal packets with Data Sequence Mapping and checksum
mptcpdssmrate	<Double>	Read-only	Rate (/s) counter for mptcptotdssm
mptcptotinfinitemapfrwd	<Double>	Read-only	MPTCP received Data Sequence Signal with infinite map flag (Fallback to regular TCP).
mptcpinfinitemapfrwdrate	<Double>	Read-only	Rate (/s) counter for mptcptotinfinitemapfrwd
mptcptotdatalessthandatalen	<Double>	Read-only	MPTCP Map amount of data not yet received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcpdatalessthandatalenrate	<Double>	Read-only	Rate (/s) counter for mptcptotdatalessthandatalen
mptcppriobackuprx	<Double>	Read-only	MPTCP Subflow used as backup path.
mptcppriobackuprxrate	<Double>	Read-only	Rate (/s) counter for mptcppriobackuprx
mptcpprioclearbackuprx	<Double>	Read-only	Subflow earlier used only as a backup subflow, changes to regular subflow with MP_PRIO option
mptcpprioclearbackuprxrate	<Double>	Read-only	Rate (/s) counter for mptcpprioclearbackuprx
mptcptottxdatafin	<Double>	Read-only	Total MPTCP connection close requests sent
mptcptxdatafinrate	<Double>	Read-only	Rate (/s) counter for mptcptottxdatafin
mptcptotrxdatafin	<Double>	Read-only	Total MPTCP connection close(DATA_FIN) requests received.
mptcprxdatafinrate	<Double>	Read-only	Rate (/s) counter for mptcptotrxdatafin
mptcptottxsffin	<Double>	Read-only	MPTCP total subflow close requests.
mptcptxsffinrate	<Double>	Read-only	Rate (/s) counter for mptcptottxsffin

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrinvalcookie	<Double>	Read-only	MPTCP invalid cookie received on MP_CAPABLE final ACK.
mptcperrinvalcookierate	<Double>	Read-only	Rate (/s) counter for mptcperrinvalcookie
mptcperrextnflagset	<Double>	Read-only	Extension flag is set on MP_CAPABLE request.
mptcperrextnflagsetrate	<Double>	Read-only	Rate (/s) counter for mptcperrextnflagset
mptcperrresflagset	<Double>	Read-only	MPTCP One or more reserved bits are set on MP_CAPABLE request.
mptcperrresflagsetrate	<Double>	Read-only	Rate (/s) counter for mptcperrresflagset
mptcperrunknowntoken	<Double>	Read-only	MPTCP invalid token received on MP_JOIN request.
mptcperrunknowntokenrate	<Double>	Read-only	Rate (/s) counter for mptcperrunknowntoken
mptcperraddridexist	<Double>	Read-only	MPTCP MP_JOIN request on existing address id.
mptcperraddridexistrate	<Double>	Read-only	Rate (/s) counter for mptcperraddridexist
mptcperraddrid0	<Double>	Read-only	MPTCP MP_JOIN request on address id 0.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperraddrid0rate	<Double>	Read-only	Rate (/s) counter for mptcperraddrid0
mptcperrmaxsf	<Double>	Read-only	MPTCP new MP_JOIN request after maximum configured subflows are established.
mptcperrmaxsfrate	<Double>	Read-only	Rate (/s) counter for mptcperrmaxsf
mptcperrjointhreshold	<Double>	Read-only	MPTCP Global pending MP_JOIN threshold limit is reached, new MP_JOIN request will be dropped sending RST
mptcperrjointhresholdrate	<Double>	Read-only	Rate (/s) counter for mptcperrjointhreshold
mptcperrjoinafterfallback	<Double>	Read-only	MPTCP New MP_JOIN request received after fallback to regular tcp.
mptcperrjoinafterfallbackrate	<Double>	Read-only	Rate (/s) counter for mptcperrjoinafterfallback
mptcperrinvalmac	<Double>	Read-only	MPTCP invalid MAC on MP_JOIN final ACK.
mptcperrinvalmacrate	<Double>	Read-only	Rate (/s) counter for mptcperrinvalmac

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrinvalopts	<Double>	Read-only	MPTCP invalid mptcp option is received and is dropped.
mptcperrinvaloptsrate	<Double>	Read-only	Rate (/s) counter for mptcperrinvalopts
mptcperroptiondiscarded	<Double>	Read-only	Invalid subtype in MPTCP option field and hence discarded.
mptcperroptiondiscardedrate	<Double>	Read-only	Rate (/s) counter for mptcperroptiondiscarded
mptcperroptsnosession	<Double>	Read-only	MPTCP options sent on non existing connection/subflow PCBs.
mptcperroptsnosessionrate	<Double>	Read-only	Rate (/s) counter for mptcperroptsnosession
mptcperrinvalremaddr	<Double>	Read-only	MPTCP remove address request received on invalid/ unknown address id.
mptcperrinvalremaddrrate	<Double>	Read-only	Rate (/s) counter for mptcperrinvalremaddr
mptcperroptssendrst	<Double>	Read-only	MPTCP sent RST on receiving improper option field.
mptcperroptssendrstrate	<Double>	Read-only	Rate (/s) counter for mptcperroptssendrst

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrremaddrself	<Double>	Read-only	MPTCP remove address request for self address.
mptcperrremaddrself rate	<Double>	Read-only	Rate (/s) counter for mptcperrremaddrself
mptcperrrssffail	<Double>	Read-only	Add RSS filter to steer traffic to right node on established MPTCP session failed.
mptcperrrssffailrate	<Double>	Read-only	Rate (/s) counter for mptcperrrssffail
mptcperrnopayloadle npkt	<Double>	Read-only	MPTCP Payload length not specified in packet.
mptcperrnopayloadle npktrate	<Double>	Read-only	Rate (/s) counter for mptcperrnopayloadle npkt
mptcperrunsupporte dmssnegotiated	<Double>	Read-only	MPTCP Unsupported MSS negotiated error.
mptcperrunsupporte dmssnegotiatedrate	<Double>	Read-only	Rate (/s) counter for mptcperrunsupporte dmssnegotiated
mptcperrbadcksum	<Double>	Read-only	MPTCP checksum failed. Connection will fallback to regular tcp.
mptcperrbadcksumra te	<Double>	Read-only	Rate (/s) counter for mptcperrbadcksum

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrcryptonotsupported	<Double>	Read-only	MPTCP client crypto algorithm not supported.
mptcperrcryptonotsupportedrate	<Double>	Read-only	Rate (/s) counter for mptcperrcryptonotsupported
mptcperrversionnotsupported	<Double>	Read-only	MPTCP MP_CAPABLE request from unsupported mptcp client.
mptcperrversionnotsupportedrate	<Double>	Read-only	Rate (/s) counter for mptcperrversionnotsupported
mptcpplainackrst	<Double>	Read-only	MPTCP Sent RST on receiving plain ACK for DSS.
mptcpplainackrstrate	<Double>	Read-only	Rate (/s) counter for mptcpplainackrst
mptcperrdatafinpassive	<Double>	Read-only	MPTCP Data FIN received on passive subflow
mptcperrdatafinpassiverate	<Double>	Read-only	Rate (/s) counter for mptcperrdatafinpassive
mptcperrfastclose	<Double>	Read-only	MPTCP FAST CLOSE sent.
mptcperrfastcloserate	<Double>	Read-only	Rate (/s) counter for mptcperrfastclose

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrfastclosepassive	<Double>	Read-only	MPTCP Fast close received on passive subflow.
mptcperrfastclosepassiverate	<Double>	Read-only	Rate (/s) counter for mptcperrfastclosepassive
mptcperrfastclosekey	<Double>	Read-only	MPTCP FAST_CLOSE received with invalid key and the packet is dropped.
mptcperrfastclosekeyrate	<Double>	Read-only	Rate (/s) counter for mptcperrfastclosekey
mptcpmpfailsent	<Double>	Read-only	MPTCP Total MP_FAIL sent due to checksum failure.
mptcpmpfailsentrate	<Double>	Read-only	Rate (/s) counter for mptcpmpfailsent
mptcpmpfailrecvd	<Double>	Read-only	MPTCP Total MP_FAIL received and fallback to regular TCP.
mptcpmpfailrecvdrate	<Double>	Read-only	Rate (/s) counter for mptcpmpfailrecvd
mptcperrnomappktrcvd	<Double>	Read-only	MPTCP Packet received with no Data Sequence Mapping.
mptcperrnomappktrcvdrate	<Double>	Read-only	Rate (/s) counter for mptcperrnomappktrcvd

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcptotmoredatarcvd	<Double>	Read-only	MPTCP More data received than the available Data Sequence Mapping.
mptcpmoredatarcvdrate	<Double>	Read-only	Rate (/s) counter for mptcptotmoredatarcvd
mptcperrbadmapcondrop	<Double>	Read-only	MPTCP Drop the session incase of invalid Data Sequence map.
mptcperrbadmapcondroprate	<Double>	Read-only	Rate (/s) counter for mptcperrbadmapcondrop
mptcperrdupmaprecvd	<Double>	Read-only	MPTCP Duplicate maps in Data Sequence map table.
mptcperrdupmaprecvdrate	<Double>	Read-only	Rate (/s) counter for mptcperrdupmaprecvd
mptcperrinvalidsfn	<Double>	Read-only	MPTCP subflow map doesn't exactly match MPTCP session mapping.
mptcperrinvalidsfnrate	<Double>	Read-only	Rate (/s) counter for mptcperrinvalidsfn
mptcperrmapexists	<Double>	Read-only	MPTCP sequence map already exists.
mptcperrmapexistsrate	<Double>	Read-only	Rate (/s) counter for mptcperrmapexists

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrretxpktrcvd	<Double>	Read-only	Retransmitted Data Recevied on MPTCP session.
mptcperrretxpktrcvdrate	<Double>	Read-only	Rate (/s) counter for mptcperrretxpktrcvd
mptcperrsfsessionallocfail	<Double>	Read-only	Attaching the subflow to MPTCP session failed due to failure in allocating memory to subflow map table.
mptcperrsfsessionallocfailrate	<Double>	Read-only	Rate (/s) counter for mptcperrsfsessionallocfail
mptcperrmpcapsessionallocfail	<Double>	Read-only	Creating a MPTCP connection failed due to failure in allocating memory to MPTCP connection management structure.
mptcperrmpcapsessionallocfailrate	<Double>	Read-only	Rate (/s) counter for mptcperrmpcapsessionallocfail
mptcptotmpcapsfpcballoc	<Double>	Read-only	Allocating memory to TCP protocol control block(PCB) for subflow failed.
mptcpmpcapsfpcballocrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapsfpcballoc

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcptotmpcballocfailed	<Double>	Read-only	Allocating memory to MPTCP protocol control block failed.
mptcpmpcballocfailedrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcballocfailed
mptcperrnsballocfailed	<Double>	Read-only	Failed to allocate memory to output MPTCP packet.
mptcperrnsballocfailedrate	<Double>	Read-only	Rate (/s) counter for mptcperrnsballocfailed
mptcperrnosffreensb	<Double>	Read-only	MPTCP output a packet without any subflow PCB.
mptcperrnosffreensbrate	<Double>	Read-only	Rate (/s) counter for mptcperrnosffreensb
mptcperrv1datarecvdpriortokey	<Double>	Read-only	MPTCP V1 data received prior to key
mptcperrv1datarecvdpriortokeyrate	<Double>	Read-only	Rate (/s) counter for mptcperrv1datarecvdpriortokey

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/protocolmptcp **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/protocolmptcp? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get protocolmptcp resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/protocolmptcp? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

quicappconnclosepktfailrate	<Double>	Read-only	Rate (/s) counter for quicappconnclosepktfail

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
quicretrytokenverfail	<Double>	Read-only	Number of times QUIC Retry token verification failed
quicretrytokenverfailrate	<Double>	Read-only	Rate (/s) counter for quicretrytokenverfail
quicnewtokenverfail	<Double>	Read-only	Number of times QUIC NEW_TOKEN token verification failed
quicnewtokenverfailrate	<Double>	Read-only	Rate (/s) counter for quicnewtokenverfail

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/protocolquic **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/protocolquic? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get protocolquic resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/protocolquic? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

protocoltcp

Statistics for tcp protocol resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
tcpactiveserverconn	<Double>	Read-only	Connections to a server currently responding to requests.
tcpcurserverconnopening	<Double>	Read-only	Server connections in the Opening state, which indicates that the handshakes are not yet complete.
tcpcurclientconnopening	<Double>	Read-only	Client connections in the Opening state, which indicates that the handshakes are not yet complete.
tcpcurclientconnestablished	<Double>	Read-only	Current client connections in the Established state, which indicates that data transfer can occur between the Citrix ADC and the client.
tcpcurserverconnestablished	<Double>	Read-only	Current server connections in the Established state,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			which indicates that data transfer can occur between the Citrix ADC and the server.
tcptotrxpkts	<Double>	Read-only	TCP packets received.
tcprxpktsrate	<Double>	Read-only	Rate (/s) counter for tcptotrxpkts
tcptotrxbytes	<Double>	Read-only	Bytes of TCP data received.
tcprxbytesrate	<Double>	Read-only	Rate (/s) counter for tcptotrxbytes
tcptottxpkts	<Double>	Read-only	TCP packets transmitted.
tcptxpktsrate	<Double>	Read-only	Rate (/s) counter for tcptottxpkts
tcptottxbytes	<Double>	Read-only	Bytes of TCP data transmitted.
tcptxbytesrate	<Double>	Read-only	Rate (/s) counter for tcptottxbytes
tcpcurclientconn	<Double>	Read-only	Client connections, including connections in the Opening, Established, and Closing state.
tcpcurclientconnclosing	<Double>	Read-only	Client connections in the Closing state, which indicates that the connection termination process

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			has initiated but is not complete.
tcptotclientconnopened	<Double>	Read-only	Client connections opened by the Citrix ADC since startup (after three-way handshake). This counter is reset when the Citrix ADC is restarted.
tcpclientconnopenedrate	<Double>	Read-only	Rate (/s) counter for tcptotclientconnopened
tcpcurserverconn	<Double>	Read-only	Server connections, including connections in the Opening, Established, and Closing state.
tcpcurserverconnclosing	<Double>	Read-only	Server connections in the Closing state, which indicates that the connection termination process has initiated but is not complete.
tcptotserverconnopened	<Double>	Read-only	Server connections initiated by the Citrix ADC since startup. This counter is reset when the Citrix ADC is restarted.
tcpserverconnopenedrate	<Double>	Read-only	Rate (/s) counter for tcptotserverconnopened

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcpsurgequeuelen	<Double>	Read-only	Connections in the surge queue. When the Citrix ADC cannot open a connection to the server, for example when maximum connections have been reached, the Citrix ADC queues these requests.
tcpspareconn	<Double>	Read-only	Spare connections available. To save time and resources in establishing another connection for a new client, the connection on the server is not closed after completing the request from the first client and is available for serving future requests.
tcptotzombiecltconnflushed	<Double>	Read-only	Client connections that are flushed because the client has been idle for some time.
tcpzombiecltconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiecltconnflushed
tcptotzombiehalfopencltconnflushed	<Double>	Read-only	Half-opened client connections that are flushed because the three-way

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			handshakes are not complete.
tcpzombiehalfopencltconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiehalfopencltconnflushed
tcptotzombieactivehalfclosecltconnflushed	<Double>	Read-only	Active half-closed client connections that are flushed because the client has closed the connection and there has been no activity on the connection.
tcpzombieactivehalfclosecltconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombieactivehalfclosecltconnflushed
tcptotzombiepassivehalfclosecltconnflushed	<Double>	Read-only	Passive half-closed client connections that are flushed because the Citrix ADC has closed the connection and there has been no activity on the connection.
tcpzombiepassivehalfclosecltconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiepassivehalfclosecltconnflushed
tcptotzombiesvrconnflushed	<Double>	Read-only	Server connections that are flushed because there have been no client requests in the queue for some time.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcpzombiesvrconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiesvrconnflushed
tcptotzombiehalfopensvrconnflushed	<Double>	Read-only	Half-opened server connections that are flushed because the three-way handshakes are not complete.
tcpzombiehalfopensvrconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiehalfopensvrconnflushed
tcptotzombieactivehalfclosesvrconnflushed	<Double>	Read-only	Active half-closed server connections that are flushed because the server has closed the connection and there has been no activity on the connection.
tcpzombieactivehalfclosesvrconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombieactivehalfclosesvrconnflushed
tcptotzombiepassivehalfclosesrvconnflushed	<Double>	Read-only	Passive half-closed server connections that are flushed because the Citrix ADC has closed the connection and there has been no activity on the connection.
tcpzombiepassivehalfclosesrvconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiepassive

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			halfclosesrvconnflushed
pcbtotzombiecall	<Double>	Read-only	Times the Zombie cleanup function is called. Every time a connection is flushed, it is marked for cleanup. The Zombie cleanup function clears all these connections at predefined intervals.
pcbzombiecallrate	<Double>	Read-only	Rate (/s) counter for pcbtotzombiecall
tcptotsyn	<Double>	Read-only	SYN packets received
tcpsynrate	<Double>	Read-only	Rate (/s) counter for tcptotsyn
tcptotsynprobe	<Double>	Read-only	Probes from the Citrix ADC to a server. The Citrix ADC sends a SYN packet to the server to check its availability and expects a SYN_ACK packet from the server before a specified response timeout.
tcpsynproberate	<Double>	Read-only	Rate (/s) counter for tcptotsynprobe
tcptotsvrfin	<Double>	Read-only	FIN packets received from the server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcpsvrfinrate	<Double>	Read-only	Rate (/s) counter for tcptotsvrfin
tcptotcltfin	<Double>	Read-only	FIN packets received from the clients.
tcpcltfinrate	<Double>	Read-only	Rate (/s) counter for tcptotcltfin
tcpwaittosyn	<Double>	Read-only	SYN packets (packets used to initiate a TCP connection) received on connections that are in the TIME_WAIT state. Packets cannot be transferred on a connection in this state.
tcpwaittosynrate	<Double>	Read-only	Rate (/s) counter for tcpwaittosyn
tcpwaittodata	<Double>	Read-only	Bytes of data received on connections that are in the TIME_WAIT state. Data cannot be transferred on a connection that is in this state.
tcpwaittodatarate	<Double>	Read-only	Rate (/s) counter for tcpwaittodata
tcptotsynheld	<Double>	Read-only	SYN packets held on the Citrix ADC that are waiting for a server connection.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcpsynheldrate	<Double>	Read-only	Rate (/s) counter for tcptotsynheld
tcptotsynflush	<Double>	Read-only	SYN packets flushed on the Citrix ADC because of no response from the server for three or more seconds.
tcpsynflushrate	<Double>	Read-only	Rate (/s) counter for tcptotsynflush
tcptotfinwaitclosed	<Double>	Read-only	Connections closed on the Citrix ADC because the number of connections in the TIME_WAIT state has exceeded the default value of 7000.
tcpfinwaitclosedrate	<Double>	Read-only	Rate (/s) counter for tcptotfinwaitclosed
tcperrbadchecksum	<Double>	Read-only	Packets received with a TCP checksum error.
tcperrbadchecksumrate	<Double>	Read-only	Rate (/s) counter for tcperrbadchecksum
tcperrdataafterfin	<Double>	Read-only	Packets received following a connection termination request. This error is usually caused by a reordering of packets during transmission.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrdataafterfinrate	<Double>	Read-only	Rate (/s) counter for tcperrdataafterfin
tcperrsyninsynrcvd	<Double>	Read-only	SYN packets received on a connection that is in the SYN_RCVD state. A connection goes into the SYN_RCVD state after receiving a SYN packet.
tcperrsyninsynrcvdrate	<Double>	Read-only	Rate (/s) counter for tcperrsyninsynrcvd
tcperrsyninest	<Double>	Read-only	SYN packets received on a connection that is in the ESTABLISHED state. A SYN packet is not expected on an ESTABLISHED connection.
tcperrsyninestrate	<Double>	Read-only	Rate (/s) counter for tcperrsyninest
tcperrsynsentbadack	<Double>	Read-only	Incorrect ACK packets received on a connection that is in the SYN_SENT state. An incorrect ACK packet is the third packet in the three-way handshake that has an incorrect sequence number.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrsynsentbadackrate	<Double>	Read-only	Rate (/s) counter for tcperrsynsentbadack
tcperrrst	<Double>	Read-only	Reset packets received from a client or a server.
tcperrrstrate	<Double>	Read-only	Rate (/s) counter for tcperrrst
tcperrrstnonest	<Double>	Read-only	Reset packets received on a connection that is not in the ESTABLISHED state.
tcperrrstnonestrate	<Double>	Read-only	Rate (/s) counter for tcperrrstnonest
tcperrrstoutofwindow	<Double>	Read-only	Reset packets received on a connection that is out of the current TCP window.
tcperrrstoutofwindowrate	<Double>	Read-only	Rate (/s) counter for tcperrrstoutofwindow
tcperrrstintimewait	<Double>	Read-only	Reset packets received on a connection that is in the TIME_WAIT state. Packets cannot be transferred on a connection in the TIME_WAIT state.
tcperrrstintimewaitrate	<Double>	Read-only	Rate (/s) counter for tcperrrstintimewait

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrsvroutoforder	<Double>	Read-only	Out of order TCP packets received from a server.
tcperrsvroutoforderrate	<Double>	Read-only	Rate (/s) counter for tcperrsvroutoforder
tcperrcltoutoforder	<Double>	Read-only	Out of order TCP packets received from a client.
tcperrcltoutoforderrate	<Double>	Read-only	Rate (/s) counter for tcperrcltoutoforder
tcperrclthole	<Double>	Read-only	TCP holes created on a client connection. When out of order packets are received from a client, a hole is created on the Citrix ADC for each group of missing packets.
tcperrcltholerate	<Double>	Read-only	Rate (/s) counter for tcperrclthole
tcperrsvrhole	<Double>	Read-only	TCP holes created on a server connection. When out of order packets are received from a server, a hole is created on the Citrix ADC for each group of missing packets.
tcperrsvrholerate	<Double>	Read-only	Rate (/s) counter for tcperrsvrhole

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrcookiepktseqreject	<Double>	Read-only	SYN cookie packets rejected because they contain an incorrect sequence number.
tcperrcookiepktseqrejectrate	<Double>	Read-only	Rate (/s) counter for tcperrcookiepktseqreject
tcperrcookiepktsigreject	<Double>	Read-only	SYN cookie packets rejected because they contain an incorrect signature.
tcperrcookiepktsigrejectrate	<Double>	Read-only	Rate (/s) counter for tcperrcookiepktsigreject
tcperrcookiepktseqdrop	<Double>	Read-only	SYN cookie packets dropped because the sequence number specified in the packets is outside the current window.
tcperrcookiepktseqdroprate	<Double>	Read-only	Rate (/s) counter for tcperrcookiepktseqdrop
tcperrcookiepktmssreject	<Double>	Read-only	SYN cookie packets rejected because the maximum segment size (MSS) specified in the packets is incorrect.
tcperrcookiepktmssrejectrate	<Double>	Read-only	Rate (/s) counter for tcperrcookiepktmssreject

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperranyportfail	<Double>	Read-only	Port allocations that have failed on a mapped IP address because the maximum limit of 65536 has been exceeded.
tcperranyportfailrate	<Double>	Read-only	Rate (/s) counter for tcperranyportfail
tcperripportfail	<Double>	Read-only	Port allocations that have failed on a subnet IP address or vserver IP address because the maximum limit of 65536 has been exceeded.
tcperripportfailrate	<Double>	Read-only	Rate (/s) counter for tcperripportfail
tcperrstraypkt	<Double>	Read-only	Number of stray or misrouted packets.
tcperrstraypktrate	<Double>	Read-only	Rate (/s) counter for tcperrstraypkt
tcperrsentrst	<Double>	Read-only	Reset packets sent to a client or a server.
tcperrsentrstrate	<Double>	Read-only	Rate (/s) counter for tcperrsentrst
tcperrbadstateconn	<Double>	Read-only	Connections that are not in a valid TCP state.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrbadstateconnrate	<Double>	Read-only	Rate (/s) counter for tcperrbadstateconn
tcperrrstthreshold	<Double>	Read-only	Reset packets dropped because the default threshold of 100 resets per 10 milliseconds has been exceeded. This is a configurable value using the set rateControl command.
tcperrrstthresholdrate	<Double>	Read-only	Rate (/s) counter for tcperrrstthreshold
tcperroutofwindowpkts	<Double>	Read-only	Packets received that are out of the current advertised window.
tcperroutofwindowpktsrate	<Double>	Read-only	Rate (/s) counter for tcperroutofwindowpkts
tcperrsyndroppedcongestion	<Double>	Read-only	SYN packets dropped because of network congestion.
tcperrsyndroppedcongestionrate	<Double>	Read-only	Rate (/s) counter for tcperrsyndroppedcongestion
tcperrcltretrasmit	<Double>	Read-only	Packets retransmitted by a client. This usually occurs because the acknowledgement from the Citrix ADC

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			has not reached the client.
tcperrcltretrasmitrate	<Double>	Read-only	Rate (/s) counter for tcperrcltretrasmit
tcperrfullretrasmit	<Double>	Read-only	Full packets retransmitted by the client or the server.
tcperrfullretrasmitrate	<Double>	Read-only	Rate (/s) counter for tcperrfullretrasmit
tcperrsynretry	<Double>	Read-only	SYN packets resent to a server.
tcperrsynretryrate	<Double>	Read-only	Rate (/s) counter for tcperrsynretry
tcperrsyngiveup	<Double>	Read-only	Attempts to establish a connection on the Citrix ADC that timed out.
tcperrsyngiveuprate	<Double>	Read-only	Rate (/s) counter for tcperrsyngiveup
tcperrretransmit	<Double>	Read-only	TCP packets retransmitted. The Citrix ADC attempts to retransmit the packet up to seven times, after which it resets the other half of the TCP connection.
tcperrretransmitrate	<Double>	Read-only	Rate (/s) counter for tcperrretransmit

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrfirstretransmissions	<Double>	Read-only	Packets retransmitted once by the Citrix ADC.
tcperrfirstretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrfirstretransmissions
tcperrthirdretransmissions	<Double>	Read-only	Packets retransmitted three times by the Citrix ADC.
tcperrthirdretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrthirdretransmissions
tcperrfifthretransmissions	<Double>	Read-only	Packets retransmitted five times by the Citrix ADC.
tcperrfifthretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrfifthretransmissions
tcperrseventhretransmissions	<Double>	Read-only	Packets retransmitted seven times by the Citrix ADC. If this fails, the Citrix ADC terminates the connection.
tcperrseventhretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrseventhretransmissions
tcperrfastretransmissions	<Double>	Read-only	TCP packets on which the Citrix ADC performs a fast

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			retransmission in response to three duplicate acknowledgements or a partial acknowledgement. The Citrix ADC assumes that the packet is lost and retransmits the packet before its time-out.
tcperrfastretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrfastretransmissions
tcperrsvrretrasmit	<Double>	Read-only	Packets retransmitted by a server. This usually occurs because the acknowledgement from the Citrix ADC has not reached the server.
tcperrsvrretrasmitrate	<Double>	Read-only	Rate (/s) counter for tcperrsvrretrasmit
tcperrpartialretrasmit	<Double>	Read-only	Partial packet retransmits by a client or server due to congestion on the connection. This usually occurs because the window advertised by the Citrix ADC is not big enough to hold the full packet.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrpartialretrasmit rate	<Double>	Read-only	Rate (/s) counter for tcperrpartialretrasmit
tcperrfinretry	<Double>	Read-only	FIN packets resent to a server or a client.
tcperrfinretryrate	<Double>	Read-only	Rate (/s) counter for tcperrfinretry
tcperrfingiveup	<Double>	Read-only	Connections that were timed out by the Citrix ADC because of not receiving the ACK packet after retransmitting the FIN packet four times.
tcperrfingiveuprate	<Double>	Read-only	Rate (/s) counter for tcperrfingiveup
tcperrsecondretrans missions	<Double>	Read-only	Packets retransmitted twice by the Citrix ADC.
tcperrsecondretrans missionsrate	<Double>	Read-only	Rate (/s) counter for tcperrsecondretrans missions
tcperrforthretransmis sions	<Double>	Read-only	Packets retransmitted four times by the Citrix ADC.
tcperrforthretransmis sionsrate	<Double>	Read-only	Rate (/s) counter for tcperrforthretransmis sions

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrsixthretransmissions	<Double>	Read-only	Packets retransmitted six times by the Citrix ADC.
tcperrsixthretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrsixthretransmissions
tcperrretransmitgiveup	<Double>	Read-only	Number of times Citrix ADC terminates a connection after retransmitting the packet seven times on that connection.Retrasnmission happens when recieving end doesn't acknowledges the packet.
tcperrretransmitgiveuprate	<Double>	Read-only	Rate (/s) counter for tcperrretransmitgiveup
tcperrcipalloc	<Double>	Read-only	Number of times TCP level client header insertion failure
tcperrcipallocrate	<Double>	Read-only	Rate (/s) counter for tcperrcipalloc

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/protocoltcp **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/protocoltcp? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get protocoltcp resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/protocoltcp? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

protocoludp

Statistics for UDP Protocol resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
udptotrxpkts	<Double>	Read-only	Total number of UDP packets received.
udprxpktsrate	<Double>	Read-only	Rate (/s) counter for udptotrxpkts
udptotrxbytes	<Double>	Read-only	Total number of UDP data received in bytes.
udprxbytesrate	<Double>	Read-only	Rate (/s) counter for udptotrxbytes
udptottxpkts	<Double>	Read-only	Total number of UDP packets transmitted.
udptxpktsrate	<Double>	Read-only	Rate (/s) counter for udptottxpkts
udptottxbytes	<Double>	Read-only	Total number of UDP data transmitted in bytes.
udptxbytesrate	<Double>	Read-only	Rate (/s) counter for udptottxbytes

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
udpcurratethreshold	<Double>	Read-only	Limit for UDP packets handled every 10 milliseconds. Default value, 0, applies no limit. This is a configurable value using the set rateControl command.
udptotunknownsvcpkts	<Double>	Read-only	Stray UDP packets dropped due to no configured listening service.
udpbadchecksum	<Double>	Read-only	Packets received with a UDP checksum error.
udpcurratethresholdexceeds	<Double>	Read-only	Number of times the UDP rate threshold is exceeded. If this counter continuously increases, first make sure the UDP packets received are genuine. If they are, increase the current rate threshold. This is a configurable value using the set rateControl command.

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/protocoludp **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/protocoludp? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get protocoludp resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/protocoludp? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ssions_regulated_count
snmpqosqos_sch_sessions_byte_count	<Double>	Read-only	Scheduler session bytes total
snmpqosqos_sch_sessions_byte_countrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_sch_sessions_byte_count
snmpqosqos_sch_regulated_count	<Double>	Read-only	Scheduler regulated node count
snmpqosqos_sch_regulated_countrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_sch_regulated_count
snmpqosqos_sch_links_created	<Double>	Read-only	Scheduler links created
snmpqosqos_sch_links_createdrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_sch_links_created
snmpqosqos_sch_links_deleted	<Double>	Read-only	Scheduler links deleted
snmpqosqos_sch_links_deletedrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_sch_links_deleted
snmpqosqos_sch_links_updated	<Double>	Read-only	Scheduler links updated
snmpqosqos_sch_links_updatedrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_sch_links_updated
snmpqosqos_sch_poll_count	<Double>	Read-only	Scheduler calls to poll_libqos

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
snmpqosqos_sch_poll_countrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_sch_poll_count
snmpqosqos_sch_peer_msgs	<Double>	Read-only	Scheduler peer messages received
snmpqosqos_sch_peer_msgsrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_sch_peer_msgs
snmpqosqos_error_ipc	<Double>	Read-only	IPC failed for QoS messages.
snmpqosqos_error_ipcrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_ipc
snmpqosqos_flow_mem	<Double>	Read-only	Flow memory allocated
snmpqosqos_flow_memrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_flow_mem
snmpqosqos_flows_available	<Double>	Read-only	Flows free list size
snmpqosqos_flows_availablerate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_flows_available
snmpqosqos_recycle_failed_backlog	<Double>	Read-only	Recycle failed due to backlog
snmpqosqos_recycle_failed_backlograte	<Double>	Read-only	Rate (/s) counter for snmpqosqos_recycle_failed_backlog
snmpqosqos_recycle_failed_session	<Double>	Read-only	Recycle failed due to session attachment

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
snmpqosqos_recycle_failed_sessionrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_recycle_failed_session
snmpqosqos_error_create_action_failed	<Double>	Read-only	Failed attempts to create actions
snmpqosqos_error_create_action_failedrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_create_action_failed
snmpqosqos_error_modify_action_failed	<Double>	Read-only	Failed attempts to modify actions
snmpqosqos_error_modify_action_failedrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_modify_action_failed
snmpqosqos_error_remove_action_failed	<Double>	Read-only	Failed attempts to remove actions
snmpqosqos_error_remove_action_failedrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_remove_action_failed
snmpqosqos_error_cli_unknown	<Double>	Read-only	Internal CLI error
snmpqosqos_error_cli_unknownrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_cli_unknown
snmpqosqos_error_rename_not_implemented	<Double>	Read-only	qos action rename not yet implemented
snmpqosqos_error_rename_not_implementedrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_rename_not_implemented

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
snmpqosqos_error_remove_policy_failed	<Double>	Read-only	Failed attempts to remove qos policy
snmpqosqos_error_remove_policy_failedrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_remove_policy_failed
snmpqosqos_error_create_policy_failed	<Double>	Read-only	Failed attempts to create qos policy
snmpqosqos_error_create_policy_failedrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_create_policy_failed
snmpqosqos_error_libqos_api_failures	<Double>	Read-only	Libqos api failures
snmpqosqos_error_libqos_api_failuresrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_libqos_api_failures
snmpqosqos_error_api_ses_invalidpcb	<Double>	Read-only	Libqos api qos_session_add_pcb/natpcb() failed for reason QS_EINVALIDPCB
snmpqosqos_error_api_ses_invalidpcbrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_api_ses_invalidpcb
snmpqosqos_error_api_ses_notready	<Double>	Read-only	Libqos api qos_session_add_pcb/natpcb() failed for reason QS_ENOTREADY
snmpqosqos_error_api_ses_notreadyrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_api_ses_notready

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
snmpqosqos_error_api_ses_add_insession	<Double>	Read-only	Libqos api qos_session_add_pcb/natpcb() failed for reason QS_EINSESSION
snmpqosqos_error_api_ses_add_insessionrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_api_ses_add_insession
snmpqosqos_error_api_ses_add_other	<Double>	Read-only	Libqos api qos_session_add_pcb/natpcb() failed
snmpqosqos_error_api_ses_add_otherrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_api_ses_add_other
snmpqosqos_error_api_ses_rem_notinsession	<Double>	Read-only	Libqos api qos_session_rem_pcb/natpcb() failed for reason QS_ENOTINSESSION
snmpqosqos_error_api_ses_rem_notinsessionrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_api_ses_rem_notinsession
snmpqosqos_error_api_ses_rem_other	<Double>	Read-only	Libqos api qos_session_rem_pcb/natpcb() failed
snmpqosqos_error_api_ses_rem_otherrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_api_ses_rem_other

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
snmpqosqos_error_api_ses_del	<Double>	Read-only	Libqos api qos_session_delete faled
snmpqosqos_error_api_ses_delrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_api_ses_del
snmpqosqos_error_no_flows	<Double>	Read-only	Libqos out of flow memory
snmpqosqos_error_no_flowsrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_no_flows
snmpqosqos_error_no_sessions	<Double>	Read-only	Libqos out of session memory
snmpqosqos_error_no_sessionsrate	<Double>	Read-only	Rate (/s) counter for snmpqosqos_error_no_sessions

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/qos **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/qos? **args=name: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get qos resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/qos? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

}]}
```

rewritepolicylabel

Statistics for rewrite policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name of the rewrite policy label. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pipolicylabelhits	<Double>	Read-only	Number of times policy label was invoked.
pipolicylabelhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicylabelhits

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/rewritepolicylabel **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/rewritepolicylabel? **args=labelname: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get rewritepolicylabel resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/rewritepolicylabel? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

sslbedtlsv1sessionsrate	<Double>	Read-only	Rate (/s) counter for sslbetotdtlsv1sessions
sslbetotdtlsv12sessions	<Double>	Read-only	Number of back-end DTLSv1.2 sessions on the Citrix ADC.
sslbedtlsv12sessionsrate	<Double>	Read-only	Rate (/s) counter for sslbetotdtlsv12sessions
sslbetotsessionmultiplexattempts	<Double>	Read-only	Number of back-end SSL session multiplex attempts on the Citrix ADC.
sslbesessionmultiplexattemptsrate	<Double>	Read-only	Rate (/s) counter for sslbetotsessionmultiplexattempts

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetotsessionmultiplexattemptsuccess	<Double>	Read-only	Number of back-end SSL session multiplex successes on the Citrix ADC.
sslbesessionmultiplexattemptsuccessrate	<Double>	Read-only	Rate (/s) counter for sslbetotsessionmultiplexattemptsuccess
sslbetotsessionmultiplexattemptfails	<Double>	Read-only	Number of back-end SSL session multiplex failures on the Citrix ADC.
sslbesessionmultiplexattemptfailsrate	<Double>	Read-only	Rate (/s) counter for sslbetotsessionmultiplexattemptfails
ssltotenc	<Double>	Read-only	Number of bytes encrypted on the Citrix ADC.
sslencrate	<Double>	Read-only	Rate (/s) counter for ssltotenc
ssltotdec	<Double>	Read-only	Number of bytes decrypted on the Citrix ADC.
ssldecrate	<Double>	Read-only	Rate (/s) counter for ssltotdec
ssltotsslserverinrecords	<Double>	Read-only	Number server in record on the Citrix ADC.
sslsslserverinrecordsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslserverinrecords

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotrenegsessions	<Double>	Read-only	Number of SSL session renegotiations on the Citrix ADC.
sslrenegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotrenegsessions
ssltotsslv3renegsessions	<Double>	Read-only	Number of session renegotiations done on SSLv3.
sslsslv3renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv3renegsessions
ssltottlsv1renegsessions	<Double>	Read-only	Number of SSL session renegotiations done on TLSv1.
ssltlsv1renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv1renegsessions
ssltottlsv11renegsessions	<Double>	Read-only	Number of SSL session renegotiations done on TLSv1.1.
ssltlsv11renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv11renegsessions
ssltottlsv12renegsessions	<Double>	Read-only	Number of SSL session renegotiations done on TLSv1.2.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltlsv12renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv12renegsessions
ssltotdtlsv1renegsessions	<Double>	Read-only	Number of SSL session renegotiations done on DTLSv1.
ssldtlsv1renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv1renegsessions
ssltotdtlsv12renegsessions	<Double>	Read-only	Number of SSL session renegotiations done on DTLSv1.2.
ssldtlsv12renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv12renegsessions
ssltotrsa512keyexchanges	<Double>	Read-only	Number of RSA 512-bit key exchanges on the Citrix ADC.
sslrsa512keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotrsa512keyexchanges
ssltotrsa1024keyexchanges	<Double>	Read-only	Number of RSA 1024-bit key exchanges on the Citrix ADC.
sslrsa1024keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotrsa1024keyexchanges
ssltotrsa2048keyexchanges	<Double>	Read-only	Number of RSA 2048-bit key

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			exchanges on the Citrix ADC.
sslrsa2048keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotrsa2048keyexchanges
ssltotrsa3072keyexchanges	<Double>	Read-only	Number of RSA 3072-bit key exchanges on the Citrix ADC.
sslrsa3072keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotrsa3072keyexchanges
ssltotrsa4096keyexchanges	<Double>	Read-only	Number of RSA 4096-bit key exchanges on the Citrix ADC.
sslrsa4096keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotrsa4096keyexchanges
ssltotdh512keyexchanges	<Double>	Read-only	Number of Diffie-Helman 512-bit key exchanges on the Citrix ADC.
ssldh512keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotdh512keyexchanges
ssltotdh1024keyexchanges	<Double>	Read-only	Number of Diffie-Helman 1024-bit key exchanges on the Citrix ADC.
ssldh1024keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotdh1024keyexchanges

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotdh2048keyexchanges	<Double>	Read-only	Number of Diffie-Helman 2048-bit key exchanges on the Citrix ADC.
ssldh2048keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotdh2048keyexchanges
ssltotdh3072keyexchanges	<Double>	Read-only	Number of Diffie-Helman 3072-bit key exchanges on the Citrix ADC.
ssldh3072keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotdh3072keyexchanges
ssltotdh4096keyexchanges	<Double>	Read-only	Number of Diffie-Helman 4096-bit key exchanges on the Citrix ADC.
ssldh4096keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotdh4096keyexchanges
ssltotpqcx25519mlkem768keyexchanges	<Double>	Read-only	Number of Post Quantum Crypto Key Exchanges Using X25519MLKEM768 Group on the Citrix ADC.
sslpqcx25519mlkem768keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotpqcx25519mlkem768keyexchanges
ssltotecdhe521keyexchanges	<Double>	Read-only	Number of 521 Elliptical Curve

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Diffie-Helman on the Citrix ADC.
sslecdhe521keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotecdhe521keyexchanges
ssltotecdhe384keyexchanges	<Double>	Read-only	Number of 384 Elliptical Curve Diffie-Helman on the Citrix ADC.
sslecdhe384keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotecdhe384keyexchanges
ssltotecdhe256keyexchanges	<Double>	Read-only	Number of 256 Elliptical Curve Diffie-Helman on the Citrix ADC.
sslecdhe256keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotecdhe256keyexchanges
ssltotecdhe224keyexchanges	<Double>	Read-only	Number of 224 Elliptical Curve Diffie-Helman on the Citrix ADC.
sslecdhe224keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotecdhe224keyexchanges
ssltotecdhe25519keyexchanges	<Double>	Read-only	Number of 25519 Elliptical Curve Diffie-Helman on the Citrix ADC.
sslecdhe25519keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotecdhe25519keyexchanges

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotecdhetransactions	<Double>	Read-only	Total ECDHE Transactions on Citrix ADC.
sslecdhetransactionsrate	<Double>	Read-only	Rate (/s) counter for ssltotecdhetransactions
ssltot40bitrc4ciphers	<Double>	Read-only	Number of RC4 40-bit cipher encryptions on the Citrix ADC.
ssl40bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot40bitrc4ciphers
ssltot56bitrc4ciphers	<Double>	Read-only	Number of RC4 56-bit cipher encryptions on the Citrix ADC.
ssl56bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot56bitrc4ciphers
ssltot64bitrc4ciphers	<Double>	Read-only	Number of RC4 64-bit cipher encryptions on the Citrix ADC.
ssl64bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot64bitrc4ciphers
ssltot128bitrc4ciphers	<Double>	Read-only	Number of RC4 128-bit cipher encryptions on the Citrix ADC.
ssl128bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot128bitrc4ciphers
ssltot40bitdesciphers	<Double>	Read-only	Number of DES 40-bit cipher encryptions on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssl40bitdesciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot40bitdesciphers
ssltot56bitdesciphers	<Double>	Read-only	Number of DES 56-bit cipher encryptions on the Citrix ADC.
ssl56bitdesciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot56bitdesciphers
ssltot168bit3desciphers	<Double>	Read-only	Number of DES 168-bit cipher encryptions on the Citrix ADC.
ssl168bit3desciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot168bit3desciphers
ssltotcipheraes128	<Double>	Read-only	Number of AES 128-bit cipher encryptions on the Citrix ADC.
sslcipheraes128rate	<Double>	Read-only	Rate (/s) counter for ssltotcipheraes128
ssltotcipheraes256	<Double>	Read-only	Number of AES 256-bit cipher encryptions on the Citrix ADC.
sslcipheraes256rate	<Double>	Read-only	Rate (/s) counter for ssltotcipheraes256
ssltot40bitrc2ciphers	<Double>	Read-only	Number of RC2 40-bit cipher encryptions on the Citrix ADC.
ssl40bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot40bitrc2ciphers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltot56bitrc2ciphers	<Double>	Read-only	Number of RC2 56-bit cipher encryptions on the Citrix ADC.
ssl56bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot56bitrc2ciphers
ssltot128bitrc2ciphers	<Double>	Read-only	Number of RC2 128-bit cipher encryptions on the Citrix ADC.
ssl128bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot128bitrc2ciphers
ssltot128bitaesgcmciphers	<Double>	Read-only	Number of AEC-GCM 128-bit cipher encryptions on the Citrix ADC.
ssl128bitaesgcmciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot128bitaesgcmciphers
ssltot256bitaesgcmciphers	<Double>	Read-only	Number of AEC-GCM 256-bit cipher encryptions on the Citrix ADC.
ssl256bitaesgcmciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot256bitaesgcmciphers
ssltotnullciphers	<Double>	Read-only	Number of Null cipher encryptions on the Citrix ADC.
sslnullciphersrate	<Double>	Read-only	Rate (/s) counter for ssltotnullciphers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotmd5mac	<Double>	Read-only	Number of MD5 hashes on the Citrix ADC.
sslmd5macrate	<Double>	Read-only	Rate (/s) counter for ssltotmd5mac
ssltotshamac	<Double>	Read-only	Number of SHA hashes on the Citrix ADC.
sslshamacrate	<Double>	Read-only	Rate (/s) counter for ssltotshamac
ssltotsha256mac	<Double>	Read-only	Number of SHA256 hashes on the Citrix ADC.
sslsha256macrate	<Double>	Read-only	Rate (/s) counter for ssltotsha256mac
ssltotsha384mac	<Double>	Read-only	Number of SHA384 hashes on the Citrix ADC.
sslsha384macrate	<Double>	Read-only	Rate (/s) counter for ssltotsha384mac
ssltotsslv3handshakes	<Double>	Read-only	Number of handshakes on SSLv3 on the Citrix ADC.
sslsslv3handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv3handshakes
ssltottlsv1handshakes	<Double>	Read-only	Number of SSL handshakes on TLSv1 on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltlsv1handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv1handshakes
ssltottlsv11handshakes	<Double>	Read-only	Number of SSL handshakes on TLSv1.1 on the Citrix ADC.
ssltlsv11handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv11handshakes
ssltottlsv12handshakes	<Double>	Read-only	Number of SSL handshakes on TLSv1.2 on the Citrix ADC.
ssltlsv12handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv12handshakes
ssltottlsv13handshakes	<Double>	Read-only	Number of SSL handshakes on TLSv1.3 on the Citrix ADC.
ssltlsv13handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv13handshakes
ssltotdtlsv1handshakes	<Double>	Read-only	Number of SSL handshakes on DTLSv1 on the Citrix ADC.
ssldtlsv1handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv1handshakes

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotdtlsv12handshakes	<Double>	Read-only	Number of SSL handshakes on DTLSv1.2 on the Citrix ADC.
ssldtlsv12handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv12handshakes
ssltotsslv3clientauthentications	<Double>	Read-only	Number of client authentications done on SSLv3.
sslsslv3clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv3clientauthentications
ssltottlsv1clientauthentications	<Double>	Read-only	Number of client authentications done on TLSv1.
ssltlsv1clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv1clientauthentications
ssltottlsv11clientauthentications	<Double>	Read-only	Number of client authentications done on TLSv1.1.
ssltlsv11clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv11clientauthentications
ssltottlsv12clientauthentications	<Double>	Read-only	Number of client authentications done on TLSv1.2.
ssltlsv12clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv12clientauthentications

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltottlsv13clientauthentications	<Double>	Read-only	Number of client authentications done on TLSv1.3.
ssltlsv13clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv13clientauthentications
ssltotdtlsv1clientauthentications	<Double>	Read-only	Number of client authentications done on DTLSv1.
ssldtlsv1clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv1clientauthentications
ssltotdtlsv12clientauthentications	<Double>	Read-only	Number of client authentications done on DTLSv1.2.
ssldtlsv12clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv12clientauthentications
ssltotrsaauthorizations	<Double>	Read-only	Number of RSA authentications on the Citrix ADC.
sslrsaauthorizationsrate	<Double>	Read-only	Rate (/s) counter for ssltotrsaauthorizations
ssltotdhauthorizations	<Double>	Read-only	Number of Diffie-Helman authentications on the Citrix ADC.
ssldhauthorizationsrate	<Double>	Read-only	Rate (/s) counter for ssltotdhauthorizations

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotdssauthorizations	<Double>	Read-only	Total number of times DSS authorization is used on the Citrix ADC.
ssldssauthorizationsrate	<Double>	Read-only	Rate (/s) counter for ssltotdssauthorizations
ssltotecdsaauthorizations	<Double>	Read-only	Total number of times ECDSA authorization is used on the Citrix ADC.
sslecdsaauthorizationsrate	<Double>	Read-only	Rate (/s) counter for ssltotecdsaauthorizations
ssltotnullauthorizations	<Double>	Read-only	Number of Null authentications on the Citrix ADC.
sslnullauthorizationsrate	<Double>	Read-only	Rate (/s) counter for ssltotnullauthorizations
ssltotbkendsessionrenegotiate	<Double>	Read-only	Number of back-end SSL session renegotiations on the Citrix ADC.
sslbkendsessionrenegotiaterate	<Double>	Read-only	Rate (/s) counter for ssltotbkendsessionrenegotiate
ssltotbkendsslv3renego	<Double>	Read-only	Number of back-end SSLv3 session renegotiations on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbkendsslv3renegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkendsslv3renego
ssltotbkendtlsvlrenego	<Double>	Read-only	Number of back-end TLSv1 session renegotiations on the Citrix ADC.
sslbkendtlsvlrenegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkendtlsvlrenego
ssltotbkendtlsv11renego	<Double>	Read-only	Number of back-end TLSv1.1 session renegotiations on the Citrix ADC.
sslbkendtlsv11renegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkendtlsv11renego
ssltotbkendtlsv12renego	<Double>	Read-only	Number of back-end TLSv1.2 session renegotiations on the Citrix ADC.
sslbkendtlsv12renegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkendtlsv12renego
ssltotbkenddtlsvlrenego	<Double>	Read-only	Number of back-end DTLSv1 session renegotiations on the Citrix ADC.
sslbkenddtlsvlrenegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkenddtlsvlrenego

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotbkenddtlsvl2renego	<Double>	Read-only	Number of back-end DTLSv1.2 session renegotiations on the Citrix ADC.
sslbkenddtlsvl2renegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkenddtlsvl2renego
sslbetotrsa512keyexchanges	<Double>	Read-only	Number of back-end RSA 512-bit key exchanges on the Citrix ADC.
sslbersa512keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsa512keyexchanges
sslbetotrsa1024keyexchanges	<Double>	Read-only	Number of back-end RSA 1024-bit key exchanges on the Citrix ADC.
sslbersa1024keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsa1024keyexchanges
sslbetotrsa2048keyexchanges	<Double>	Read-only	Number of back-end RSA 2048-bit key exchanges on the Citrix ADC.
sslbersa2048keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsa2048keyexchanges
sslbetotrsa3072keyexchanges	<Double>	Read-only	Number of back-end RSA 3072-bit key exchanges on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbersa3072keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsa3072keyexchanges
sslbetotrsa4096keyexchanges	<Double>	Read-only	Number of back-end RSA 4096-bit key exchanges on the Citrix ADC.
sslbersa4096keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsa4096keyexchanges
sslbetotdh512keyexchanges	<Double>	Read-only	Number of back-end DH 512-bit key exchanges on the Citrix ADC.
sslbedh512keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdh512keyexchanges
sslbetotdh1024keyexchanges	<Double>	Read-only	Number of back-end DH 1024-bit key exchanges on the Citrix ADC.
sslbedh1024keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdh1024keyexchanges
sslbetotdh2048keyexchanges	<Double>	Read-only	Number of back-end DH 2048-bit key exchanges on the Citrix ADC.
sslbedh2048keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdh2048keyexchanges

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetotdh3072keyexchanges	<Double>	Read-only	Number of back-end DH 3072-bit key exchanges on the Citrix ADC.
sslbedh3072keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdh3072keyexchanges
sslbetotdh4096keyexchanges	<Double>	Read-only	Number of back-end DH 4096-bit key exchanges on the Citrix ADC.
sslbedh4096keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdh4096keyexchanges
sslbetotecdhecurve521	<Double>	Read-only	Number of back-end ECDHE 521 curve Key exchanges on the Citrix ADC.
sslbeecdhecurve521rate	<Double>	Read-only	Rate (/s) counter for sslbetotecdhecurve521
sslbetotecdhecurve384	<Double>	Read-only	Number of back-end ECDHE 384 curve Key exchanges on the Citrix ADC.
sslbeecdhecurve384rate	<Double>	Read-only	Rate (/s) counter for sslbetotecdhecurve384
sslbetotecdhecurve256	<Double>	Read-only	Number of back-end ECDHE 256 curve Key exchanges on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbeecdhecurve256rate	<Double>	Read-only	Rate (/s) counter for sslbetotecdhecurve256
sslbetotecdhecurve224	<Double>	Read-only	Number of back-end ECDHE 224 curve Key exchanges on the Citrix ADC.
sslbeecdhecurve224rate	<Double>	Read-only	Rate (/s) counter for sslbetotecdhecurve224
sslbetotecdhecurve25519	<Double>	Read-only	Number of back-end ECDHE 25519 curve Key exchanges on the Citrix ADC.
sslbeecdhecurve25519rate	<Double>	Read-only	Rate (/s) counter for sslbetotecdhecurve25519
sslbetot40bitrc4ciphers	<Double>	Read-only	Number of back-end RC4 40-bit cipher encryptions on the Citrix ADC.
sslbe40bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot40bitrc4ciphers
sslbetot56bitrc4ciphers	<Double>	Read-only	Number of back-end RC4 56-bit cipher encryptions on the Citrix ADC.
sslbe56bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot56bitrc4ciphers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetot64bitrc4ciphers	<Double>	Read-only	Number of back-end RC4 64-bit cipher encryptions on the Citrix ADC.
sslbe64bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot64bitrc4ciphers
sslbetot128bitrc4ciphers	<Double>	Read-only	Number of back-end RC4 128-bit cipher encryptions on the Citrix ADC.
sslbe128bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot128bitrc4ciphers
sslbetot40bitdesciphers	<Double>	Read-only	Number of back-end DES 40-bit cipher encryptions on the Citrix ADC.
sslbe40bitdesciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot40bitdesciphers
sslbetot56bitdesciphers	<Double>	Read-only	Number of back-end DES 56-bit cipher encryptions on the Citrix ADC.
sslbe56bitdesciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot56bitdesciphers
sslbetot168bit3desciphers	<Double>	Read-only	Number of back-end 3DES 168-bit cipher encryptions on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbe168bit3desciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot168bit3desciphers
ssltotbkendcipheraes128	<Double>	Read-only	Back-end AES 128-bit cipher encryptions on the Citrix ADC.
sslbkendcipheraes128rate	<Double>	Read-only	Rate (/s) counter for ssltotbkendcipheraes128
ssltotbkendcipheraes256	<Double>	Read-only	Back-end AES 256-bit cipher encryptions on the Citrix ADC.
sslbkendcipheraes256rate	<Double>	Read-only	Rate (/s) counter for ssltotbkendcipheraes256
sslbetot40bitrc2ciphers	<Double>	Read-only	Number of back-end RC2 40-bit cipher encryptions on the Citrix ADC.
sslbe40bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot40bitrc2ciphers
sslbetot56bitrc2ciphers	<Double>	Read-only	Number of back-end RC2 56-bit cipher encryptions on the Citrix ADC.
sslbe56bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot56bitrc2ciphers
sslbetot128bitrc2ciphers	<Double>	Read-only	Number of back-end RC2 128-bit cipher

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			encryptions on the Citrix ADC.
sslbe128bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot128bitrc2ciphers
ssltotbkendcipheraesgcm128	<Double>	Read-only	Back-end AES-GCM 128-bit cipher encryptions on the Citrix ADC.
sslbkendcipheraesgcm128rate	<Double>	Read-only	Rate (/s) counter for ssltotbkendcipheraesgcm128
ssltotbkendcipheraesgcm256	<Double>	Read-only	Back-end AES-GCM 256-bit cipher encryptions on the Citrix ADC .
sslbkendcipheraesgcm256rate	<Double>	Read-only	Rate (/s) counter for ssltotbkendcipheraesgcm256
sslbetotnullciphers	<Double>	Read-only	Number of back-end null cipher encryptions on the Citrix ADC.
sslbenullciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetotnullciphers
sslbetotmd5mac	<Double>	Read-only	Number of back-end MD5 hashes on the Citrix ADC.
sslbemd5macrate	<Double>	Read-only	Rate (/s) counter for sslbetotmd5mac

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetotshamac	<Double>	Read-only	Number of back-end SHA hashes on the Citrix ADC.
sslbeshamacrate	<Double>	Read-only	Rate (/s) counter for sslbetotshamac
sslbetotsha256mac	<Double>	Read-only	Number of back-end SHA256 hashes on the Citrix ADC.
sslbesha256macrate	<Double>	Read-only	Rate (/s) counter for sslbetotsha256mac
sslbetotsha384mac	<Double>	Read-only	Number of back-end SHA384 hashes on the Citrix ADC.
sslbesha384macrate	<Double>	Read-only	Rate (/s) counter for sslbetotsha384mac
sslbetotsslv3handshakes	<Double>	Read-only	Number of back-end SSLv3 handshakes on the Citrix ADC.
sslbesslv3handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetotsslv3handshakes
sslbetottlsv1handshakes	<Double>	Read-only	Number of back-end TLSv1 handshakes on the Citrix ADC.
sslbetlsv1handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv1handshakes
sslbetottlsv11handshakes	<Double>	Read-only	Number of back-end TLSv1.1 handshakes on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetlsv11handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv11handshakes
sslbetottlsv12handshakes	<Double>	Read-only	Number of back-end TLSv1.2 handshakes on the Citrix ADC.
sslbetlsv12handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv12handshakes
sslbetottlsv13handshakes	<Double>	Read-only	Number of back-end TLSv1.3 handshakes on the Citrix ADC.
sslbetlsv13handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv13handshakes
sslbetotdtlsv1handshakes	<Double>	Read-only	Number of back-end DTLSv1 handshakes on the Citrix ADC.
sslbedtlsv1handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdtlsv1handshakes
sslbetotdtlsv12handshakes	<Double>	Read-only	Number of back-end DTLSv1.2 handshakes on the Citrix ADC.
sslbedtlsv12handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdtlsv12handshakes
sslbetotsslv3clientauthentications	<Double>	Read-only	Number of back-end SSLv3 client authentications on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbesslv3clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotsslv3clientauthentications
sslbetottlsv1clientauthentications	<Double>	Read-only	Number of back-end TLSv1 client authentications on the Citrix ADC.
sslbetlsv1clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv1clientauthentications
sslbetottlsv11clientauthentications	<Double>	Read-only	Number of back-end TLSv1.1 client authentications on the Citrix ADC.
sslbetlsv11clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv11clientauthentications
sslbetottlsv12clientauthentications	<Double>	Read-only	Number of back-end TLSv1.2 client authentications on the Citrix ADC.
sslbetlsv12clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv12clientauthentications
sslbetottlsv13clientauthentications	<Double>	Read-only	Number of back-end TLSv1.3 client authentications on the Citrix ADC.
sslbetlsv13clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv13clientauthentications

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetotdtlsv1clientauthentications	<Double>	Read-only	Number of back-end DTLSv1 client authentications on the Citrix ADC.
sslbedtlsv1clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotdtlsv1clientauthentications
sslbetotdtlsv12clientauthentications	<Double>	Read-only	Number of back-end DTLSv1.2 client authentications on the Citrix ADC.
sslbedtlsv12clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotdtlsv12clientauthentications
sslbetotrsaauthorizations	<Double>	Read-only	Number of back-end RSA authentications on the Citrix ADC.
sslbersaauthorizationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsaauthorizations
sslbetotdhauthorizations	<Double>	Read-only	Number of back-end DH authentications on the Citrix ADC.
sslbedhauthorizationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotdhauthorizations
sslbetotdssauthorizations	<Double>	Read-only	Number of back-end DSS authentications on the Citrix ADC.
sslbedssauthorizationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotdssauthorizations

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetotecdsaauthorizations	<Double>	Read-only	Number of back-end ECDSA authentications on the Citrix ADC.
sslbeecdsaauthorizationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotecdsaauthorizations
sslbetotnullauthorizations	<Double>	Read-only	Number of back-end null authentications on the Citrix ADC.
sslbenullauthorizationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotnullauthorizations
ssltotoffloadrsakeyexchanges	<Double>	Read-only	Number of RSA key exchanges offloaded to the cryptography card.
sslloffloadrsakeyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadrsakeyexchanges
ssltotoffloadsignrsa	<Double>	Read-only	Number of RSA sign operations offloaded to the cryptography card.
sslloffloadsignrsarate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadsignrsa
ssltotoffloaddhkeyexchanges	<Double>	Read-only	Number of DH key exchanges offloaded to the cryptography card.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssloffloaddhkeyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotoffloaddhkeyexchanges
ssltotoffloadbulkrc4	<Double>	Read-only	Number of RC4 encryptions offloaded to the cryptography card.
ssloffloadbulkrc4rate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadbulkrc4
ssltotoffloadbulkdes	<Double>	Read-only	Number of DES encryptions offloaded to the cryptography card.
ssloffloadbulkdesrate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadbulkdes
ssltotoffloadbulkaes	<Double>	Read-only	Number of AES encryptions offloaded to the cryptography card.
ssloffloadbulkaesrate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadbulkaes
ssltotoffloadbulkaesgcm128	<Double>	Read-only	Number of AES-GCM 128-bit encryptions offloaded to the cryptography card.
ssloffloadbulkaesgcm128rate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadbulkaesgcm128
ssltotoffloadbulkaesgcm256	<Double>	Read-only	Number of AES-GCM 256-bit encryptions

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			offloaded to the cryptography card.
ssloffloadbulkaesgcm256rate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadbulkaesgcm256
ssltotenchw	<Double>	Read-only	Number of bytes encrypted in hardware.
sslenchwrate	<Double>	Read-only	Rate (/s) counter for ssltotenchw
ssltotencsw	<Double>	Read-only	Number of bytes encrypted in software.
sslencswrate	<Double>	Read-only	Rate (/s) counter for ssltotencsw
ssltotencfe	<Double>	Read-only	Number of bytes encrypted on the front-end.
sslencferate	<Double>	Read-only	Rate (/s) counter for ssltotencfe
ssltothwencfe	<Double>	Read-only	Number of bytes encrypted in hardware on the front-end.
sslhwencferate	<Double>	Read-only	Rate (/s) counter for ssltothwencfe
ssltotswencfe	<Double>	Read-only	Number of bytes encrypted in software on the front-end.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslswencferate	<Double>	Read-only	Rate (/s) counter for ssltotswencfe
ssltotencbe	<Double>	Read-only	Number of bytes encrypted on the back-end.
sslencberate	<Double>	Read-only	Rate (/s) counter for ssltotencbe
ssltothwencbe	<Double>	Read-only	Number of bytes encrypted in hardware on the back-end.
sslhwencberate	<Double>	Read-only	Rate (/s) counter for ssltothwencbe
ssltotswencbe	<Double>	Read-only	Number of bytes encrypted in software on the back-end.
sslswencberate	<Double>	Read-only	Rate (/s) counter for ssltotswencbe
ssltotdechw	<Double>	Read-only	Number of bytes decrypted in hardware.
ssldechwrate	<Double>	Read-only	Rate (/s) counter for ssltotdechw
ssltotdecsw	<Double>	Read-only	Number of bytes decrypted in software.
ssldecswrate	<Double>	Read-only	Rate (/s) counter for ssltotdecsw

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotdecfe	<Double>	Read-only	Number of bytes decrypted on the front-end.
ssldecferate	<Double>	Read-only	Rate (/s) counter for ssltotdecfe
ssltothwdecfe	<Double>	Read-only	Number of bytes decrypted in hardware on the front-end.
sslhwdecferate	<Double>	Read-only	Rate (/s) counter for ssltothwdecfe
ssltotswdecfe	<Double>	Read-only	Number of bytes decrypted in software on the front-end.
sslswdecferate	<Double>	Read-only	Rate (/s) counter for ssltotswdecfe
ssltotdecbe	<Double>	Read-only	Number of bytes decrypted on the back-end.
ssldecberate	<Double>	Read-only	Rate (/s) counter for ssltotdecbe
ssltothwdecbe	<Double>	Read-only	Number of bytes decrypted in hardware on the back-end.
sslhwdecberate	<Double>	Read-only	Rate (/s) counter for ssltothwdecbe
ssltotswdecbe	<Double>	Read-only	Number of bytes decrypted in

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			software on the back-end
sslswdecberate	<Double>	Read-only	Rate (/s) counter for ssltotswdecbe
sslcursslinfospcbinusecount	<Double>	Read-only	Number of SPCB in use.
sslcursslinfospcbinusecountrate	<Double>	Read-only	Rate (/s) counter for sslcursslinfospcbinusecount
sslcursessions	<Double>	Read-only	Number of active SSL sessions on the Citrix ADC.
sslcursessionsrate	<Double>	Read-only	Rate (/s) counter for sslcursessions
sslcurqsize	<Double>	Read-only	Current queue size
sslcurqsizerate	<Double>	Read-only	Rate (/s) counter for sslcurqsize
sslcursslinfonscardinqcount	<Double>	Read-only	Number of current SSL card InQ count.
sslcursslinfonscardinqcountrate	<Double>	Read-only	Rate (/s) counter for sslcursslinfonscardinqcount
sslcursslinfocardinblkq	<Double>	Read-only	Number of current SSL card In BulkQ count.
sslcursslinfocardinblkqrate	<Double>	Read-only	Rate (/s) counter for sslcursslinfocardinblkq

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslcursslinfocardinkeyq	<Double>	Read-only	Number of current SSL card In KeyQ count.
sslcursslinfocardinkeyqrate	<Double>	Read-only	Rate (/s) counter for sslcursslinfocardinkeyq
sslbemaxmultiplexedsessions	<Double>	Read-only	Number of back-end SSL sessions reused on the Citrix ADC.
sslbemaxmultiplexedsessionsrate	<Double>	Read-only	Rate (/s) counter for sslbemaxmultiplexedsessions
ssltot128bitideaciphers	<Double>	Read-only	Number of IDEA 128-bit cipher encryptions on the Citrix ADC.
ssl128bitideaciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot128bitideaciphers
sslbetot128bitideaciphers	<Double>	Read-only	Number of back-end IDEA 128-bit cipher encryptions on the Citrix ADC.
sslbe128bitideaciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot128bitideaciphers

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/ssl **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/ssl? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get ssl resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/ssl? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

sslvserver

Statistics for SSL virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
vservername	<String>	Read-write	Name of the SSL virtual server for which to show detailed statistics. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
vslbhealth	<Double>	Read-only	Health of the vserver. This gives percentage of UP services bound to this vserver.
primaryipaddress	<String>	Read-only	IP address of the vserver
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
actsvcs	<Double>	Read-only	number of ACTIVE services bound to a vserver
ssltotclientauthsuccess	<Double>	Read-only	Number of successful client authentication on this vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslclientauthsuccessrate	<Double>	Read-only	Rate (/s) counter for ssltotclientauthsuccess
ssltotclientauthfailure	<Double>	Read-only	Number of failure client authentication on this vserver
sslclientauthfailurerate	<Double>	Read-only	Rate (/s) counter for ssltotclientauthfailure
sslctxtotencbytes	<Double>	Read-only	Number of encrypted bytes per SSL vserver
sslctxencbytesrate	<Double>	Read-only	Rate (/s) counter for sslctxtotencbytes
sslctxtotdecbytes	<Double>	Read-only	Number of decrypted bytes per SSL vserver
sslctxdecbytesrate	<Double>	Read-only	Rate (/s) counter for sslctxtotdecbytes
sslctxtothwencbytes	<Double>	Read-only	Number of hardware encrypted bytes per SSL vserver
sslctxhwencbytesrate	<Double>	Read-only	Rate (/s) counter for sslctxtothwencbytes
sslctxtothwdec_bytes	<Double>	Read-only	Number of hw decrypted bytes per SSL vserver
sslctxhwdec_bytesrate	<Double>	Read-only	Rate (/s) counter for sslctxtothwdec_bytes
sslctxtotsessionnew	<Double>	Read-only	Number of new sessions created

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslctxsessionnewrate	<Double>	Read-only	Rate (/s) counter for sslctxtotsessionnew
sslctxtotsessionhits	<Double>	Read-only	Number of session hits
sslctxsessionhitsrate	<Double>	Read-only	Rate (/s) counter for sslctxtotsessionhits

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/sslvserver **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/sslvserver? **args=vservername: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get sslvserver resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/sslvserver? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

stream

Stream

Stream statistics.

NAME	DESCRIPTION
streamidentifier	Statistics for identifier resource.

streamidentifier

Statistics for identifier resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the stream identifier. Minimum length = 1
pattern	<String[]>	Read-write	Values on which grouping is performed are displayed in the output as row titles. If grouping is performed on two or more fields, their values are separated by a question mark in the row title. For example, consider a selector that contains the expressions HTTP.REQ.URL and CLIENT.IP.SRC (in that order), on an appliance that has accumulated records of a number of requests for two URLs, example.com/page1.html and example.com/page2.html, from two client IP addresses,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			192.0.2.10 and 192.0.2.11. With a pattern of ? ?, the appliance performs grouping on both fields and displays statistics for the following: * Requests for example.com/abc.html from 192.0.2.10, with a row title of example.com/abc.html? 192.0.2.10. * Requests for example.com/abc.html from 192.0.2.11, with a row title of example.com/abc.html? 192.0.2.11. * Requests for example.com/def.html from 192.0.2.10, with a row title of example.com/def.html? 192.0.2.10.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* Requests for example.com/def.html from 192.0.2.11, with a row title of example.com/def.html? 192.0.2.11. With a pattern of * ?, the appliance performs grouping on only the client IP address values and displays statistics for the following requests: * All requests from 192.0.2.10, with the IP address as the row title. * All requests from 192.0.2.11, with the IP address as the row title. With a pattern of ? *, the appliance performs grouping on only the URL values and displays statistics for the following requests:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* All requests for example.com/abc.html, with the URL as the row title. * All requests for example.com/def.html, with the URL as the row title. With a pattern of * *, the appliance displays one set of collective statistics for all the requests received, with no row title. With a pattern of example.com/abc.html ?, the appliance displays statistics for requests for example.com/abc.html from each unique client IP address. With a pattern of * 192.0.2.11, the appliance displays statistics for all requests from 192.0.2.11.
clearstats	<String>	Read-write	Clear the statsistics / counters.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = basic, full
sortby	<String>	Read-write	use this argument to sort by specific key. Possible values = Req, BandW, RspTime, Conn, breachcnt, pktCredits, pktsPerSecond, DroppedConns, tokens
sortorder	<String>	Read-write	use this argument to specify sort order. Default value: SORT_DESCENDING Possible values = ascending, descending
streamobjreq	<Double>	Read-only	Total number of Stream Requests recieved.
streamobjbandw	<Double>	Read-only	Total Bandwidth consumed.
streamobjresptime	<Double>	Read-only	Average response time of the stream session.
streamobjconn	<Double>	Read-only	Current connections on the stream session.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
streamobjbreachcnt	<Double>	Read-only	Total Breaching Transactions in configured interval.
streamobjpktcredits	<Double>	Read-only	Calculated Packet credits on current connection.
streamobjpktspersecond	<Double>	Read-only	Total packets recieved in configured interval.
streamobjdroppedconns	<Double>	Read-only	Total connections dropped.
streamobjtokens	<Double>	Read-only	Total LLM tokens consumed in configured interval.

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/streamidentifier **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/streamidentifier? **args= name:<String_value>, pattern: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value> ,sortby: <String_value> ,sortorder: <String_value> ,sortorder: <String_value>**

Use this query-parameter to get streamidentifier resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/streamidentifier? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

```

system

System

System statistics.

NAME	DESCRIPTION
system	Statistics for system.
systembw	Statistics for bw resource.
systemcpu	Statistics for cpu resource.

NAME	DESCRIPTION
systemmemory	Statistics for Global system memory stats resource.

system

Statistics for system.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
voltagev12n	<Double>	Read-only	Power supply -12V output. Acceptable range is -13.20 through -10.80 volts. 9800 and 9960 platforms display standard value of -12.0V.
voltagev5n	<Double>	Read-only	Power supply -5V output. Acceptable range is -5.50 through -4.50 volts. 9800 and 9960 platforms display standard value of -5.0V.
cpuusage	<Double>	Read-only	CPU utilization percentage.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
rescpuusage	<Double>	Read-only	Shows average CPU utilization percentage if more than 1 CPU is present.
slavecpuusage	<Double>	Read-only	CPU 1 (currently the slave CPU) utilization, as percentage of capacity. Not applicable for a single-CPU system.
mastercpuusage	<Double>	Read-only	CPU 0 (currently the master CPU) utilization, as percentage of capacity.
auxvolt7	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 7.
auxvolt6	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 6.
auxvolt5	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 5.
auxvolt4	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 4.
auxvolt3	<Double>	Read-only	Voltage of a device connected to health

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			monitoring chip through pin 3.
auxvolt2	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 2.
auxvolt1	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 1.
auxvolt0	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 0.
voltagevsen2	<Double>	Read-only	Voltage Sensor 2 Input. Currently only 13k Platforms will have valid value for this counter and for older platforms this will be 0.
voltagev5sb	<Double>	Read-only	Power Supply 5V Standby Voltage. Currently only 13k Platforms will have valid value for this counter and for older platforms this will be 0.
voltagevtt	<Double>	Read-only	Intel CPU Vtt power. Currently only 13k Platforms will have valid value for this counter and for older

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			platforms this will be 0.
voltagevbat	<Double>	Read-only	Onboard battery power supply output. 9800 and 9950 platforms display standard value of 5.0V.
voltagev12p	<Double>	Read-only	Power supply +12V output. Acceptable range is 10.80 through 13.20 volts.
voltagev5p	<Double>	Read-only	Power supply +5V output. Acceptable range is 4.50 through 5.50 volts.
voltagev33stby	<Double>	Read-only	Standby power supply +3.3V output. Acceptable range is 2.970 through 3.630 volts. 9800 and 9960 platforms display standard value of 3.3V. You can configure Standby 3.3V Supply Voltage by using the Set snmp alarm VOLTAGE-LOW command to set the lower limit and the Set snmp alarm VOLTAGE-HIGH command to set the upper limit.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
voltagev33main	<Double>	Read-only	Main power supply +3.3V output. Acceptable range is 2.970 through 3.630 volts. This is a critical counter. You can configure Main 3.3V Supply Voltage, by using the Set snmp alarm VOLTAGE-LOW command to set the lower limit and the Set snmp alarm VOLTAGE-HIGH command to set the upper limit.
voltagevcc1	<Double>	Read-only	CPU core 1 voltage. Acceptable range is 1.080 through 1.650 volts. If CPU 1 is not connected to the health monitoring chip, display shows voltage of CPU 0.
voltagevcc0	<Double>	Read-only	CPU core 0 voltage. Acceptable range is 1.080 through 1.650 volts.
numcpus	<Double>	Read-only	The number of CPUs on the Citrix ADC.
memusagepcnt	<Double>	Read-only	Percentage of memory utilization on Citrix ADC.
memuseinmb	<Double>	Read-only	Main memory currently in use, in megabytes.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
addimgmtcpuusagepcnt	<Double>	Read-only	Additonal Management CPU utilization percentage.
mgmtcpu0usagepcnt	<Double>	Read-only	Management CPU-0 utilization percentage.
mgmtcpuusagepcnt	<Double>	Read-only	Average Management CPU utilization percentage.
pktcpuusagepcnt	<Double>	Read-only	Average CPU utilization percentage for all packet engines excluding management PE.
cpuusagepcnt	<Double>	Read-only	CPU utilization percentage.
rescpuusagepcnt	<Double>	Read-only	Average CPU utilization percentage. Not applicable for a single-CPU system.
starttimelocal	<String>	Read-only	Time (in local timezone format) when the Citrix ADC was last started.
starttime	<String>	Read-only	Time when the Citrix ADC was last started.
disk0perusage	<Double>	Read-only	Used space in /flash partition of the disk, as a percentage.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			This is a critical counter. You can configure /flash Used (%) by using the Set snmp alarm DISK-USAGE-HIGH command.
disk1perusage	<Double>	Read-only	Used space in /var partition of the disk, as a percentage. This is a critical counter. You can configure /var Used (%) by using the Set snmp alarm DISK-USAGE-HIGH command.
cpufan0speed	<Double>	Read-only	CPU Fan 0 speed. Acceptable range is 3000 through 6000 RPM. This is a critical counter. You can configure CPU Fan 0 Speed by using the Set snmp alarm FAN-SPEED-LOW command to set the lower limit.
cpufan1speed	<Double>	Read-only	CPU Fan 1 speed. Acceptable range is 3000 through 6000 RPM. 7000 platform displays speed of CPU fan 0. This is a critical counter. You can configure CPU Fan 1 Speed by using the Set snmp

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			alarm FAN-SPEED-LOW command to set the lower limit.
systemfanspeed	<Double>	Read-only	System fan speed. Acceptable range is 3000 through 6000 RPM. This is a critical counter. You can configure System Fan Speed by using the Set snmp alarm FAN-SPEED-LOW command to set the lower limit.
fan0speed	<Double>	Read-only	System fan 1 speed. For new platforms associated pin is connected to CPU supporting fans. For platforms in which it is not connected, it will point to System Fan.
fanspeed	<Double>	Read-only	System fan 2 speed. For new platforms associated pin is connected to CPU supporting fans. For platforms in which it is not connected, it will point to System Fan
cpu0temp	<Double>	Read-only	CPU 0 temperature. 9800 and 9960 platforms display internal chip

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			temperature. This is a critical counter. You can configure CPU 0 Temperature by using the Set snmp alarm TEMPERATURE-HIGH command to set the upper limit.
cpu1temp	<Double>	Read-only	CPU 1 temperature. 9800 and 9960 platforms display internal chip temperature. 7000, 9010 and 10010 platforms display CPU 0 temperature. This is a critical counter. You can configure CPU 1 Temperature by using the Set snmp alarm TEMPERATURE-HIGH command to set the upper limit.
internaltemp	<Double>	Read-only	Internal temperature of health monitoring chip. This is a critical counter. You can configure Internal Temperature by using the Set snmp alarm TEMPERATURE-HIGH command to set the upper limit.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
powersupply1status	<String>	Read-only	Power supply 1 failure status.
powersupply2status	<String>	Read-only	Power supply 2 failure status.
powersupply3status	<String>	Read-only	Power supply 3 failure status.
powersupply4status	<String>	Read-only	Power supply 4 failure status.
disk0size	<Double>	Read-only	Size of /flash partition of the hard disk.
disk0used	<Double>	Read-only	Used space in /flash partition of the hard disk.
disk0avail	<Double>	Read-only	Available space in /flash partition of the hard disk.
disk1size	<Double>	Read-only	Size of /var partition of the hard disk.
disk1used	<Double>	Read-only	Used space in /var partition of the hard disk.
disk1avail	<Double>	Read-only	Available space in /var partition of the hard disk.
fan2speed	<Double>	Read-only	Speed of Fan 0 if associated pin is connected to health monitoring chip.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
fan3speed	<Double>	Read-only	Speed of Fan 1 if associated pin is connected to health monitoring chip.
fan4speed	<Double>	Read-only	Speed of Fan 2 if associated pin is connected to health monitoring chip.
fan5speed	<Double>	Read-only	Speed of Fan 3 if associated pin is connected to health monitoring chip.
auxtemp0	<Double>	Read-only	Temperature of a device connected to health monitoring chip through pin 0.
auxtemp1	<Double>	Read-only	Temperature of a device connected to health monitoring chip through pin 1.
auxtemp2	<Double>	Read-only	Temperature of a device connected to health monitoring chip through pin 2.
auxtemp3	<Double>	Read-only	Temperature of a device connected to health monitoring chip through pin 3.
timesincestart	<String>	Read-only	Seconds since the Citrix ADC started.
memsizemb	<Double>	Read-only	Total amount of system memory, in megabytes.

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/system **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/system? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get system resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/system? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

systembw

Statistics for bw resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
httpcltpoolinactive	<Double>	Read-only	No of requests sent from BW client.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httpcltpooloutactive	<Double>	Read-only	No of responses Received.
httpsvr200okresp	<Double>	Read-only	Number of 200 Ok response sent from the BW appliance.
httpsvr200okresprate	<Double>	Read-only	Rate (/s) counter for httpsvr200okresp
httpsvr404notfound	<Double>	Read-only	Number of 404 Not Found responses sent
httpsvr404notfoundrate	<Double>	Read-only	Rate (/s) counter for httpsvr404notfound
httpclterrstray	<Double>	Read-only	Number of stray packets received from server without HTTP request
httpclterrstrayrate	<Double>	Read-only	Rate (/s) counter for httpclterrstray
httpclttfplwm	<Double>	Read-only	Number of Responses Falling on LWM for TTFP.
httpclttfplwmrate	<Double>	Read-only	Rate (/s) counter for httpclttfplwm
httpclttfp_0	<Double>	Read-only	Number of Responses Falling on Band-0 for TTFP.
httpclttfp_0rate	<Double>	Read-only	Rate (/s) counter for httpclttfp_0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httpcltttfp_1	<Double>	Read-only	Number of Responses Falling on Band-1 for TTFP.
httpcltttfp_1rate	<Double>	Read-only	Rate (/s) counter for httpcltttfp_1
httpcltttfp_2	<Double>	Read-only	Number of Responses Falling on Band-2 for TTFP.
httpcltttfp_2rate	<Double>	Read-only	Rate (/s) counter for httpcltttfp_2
httpcltttfp_3	<Double>	Read-only	Number of Responses Falling on Band-3 for TTFP.
httpcltttfp_3rate	<Double>	Read-only	Rate (/s) counter for httpcltttfp_3
httpcltttfp_4	<Double>	Read-only	Number of Responses Falling on Band-4 for TTFP.
httpcltttfp_4rate	<Double>	Read-only	Rate (/s) counter for httpcltttfp_4

tm

Traffic Management

TM session/policy statistics.

NAME	DESCRIPTION
tmsessionpolicy	Statistics for TM session policy resource.
tmtrafficpolicy	Statistics for TM traffic policy resource.

tmsessionpolicy

Statistics for TM session policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the advanced tmsession policy for which to display statistics. If no name is specified, statistics for all advanced tmsession polices are shown.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pipolicyhits	<Double>	Read-only	Number of hits on the policy
pipolicyhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyhits
pipolicyundefhits	<Double>	Read-only	Number of undef hits on the policy
pipolicyundefhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyundefhits

Operations

(click to see Properties)

- GET (ALL)
- GET

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/tmsessionpolicy **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/tmsessionpolicy? **args=name: <String_value> ,detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get tmsessionpolicy resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/tmsessionpolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

user

User

User protocol statistics.

NAME	DESCRIPTION
uservserver	Statistics for virtual server resource.

uservserver

Statistics for virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the user defined virtual server. If no name is provided, statistical data of all configured user defined virtual servers is displayed. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
sortby	<String>	Read-write	use this argument to sort by specific key. Possible values = Hits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sortorder	<String>	Read-write	use this argument to specify sort order. Default value: SORT_DESCENDING Possible values = ascending, descending
establishedconn	<Double>	Read-only	Number of client connections in ESTABLISHED state.
inactsvcs	<Double>	Read-only	number of INACTIVE services bound to a vserver
vslbhealth	<Double>	Read-only	Health of the vserver. This gives percentage of UP services bound to this vserver.
primaryipaddress	<String>	Read-only	IP address of the vserver
primaryport	<Integer>	Read-only	The port on which the service is running.
protocolname	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2),

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
actsvcs	<Double>	Read-only	number of ACTIVE services bound to a vserver
tothits	<Double>	Read-only	Total vserver hits
hitsrate	<Double>	Read-only	Rate (/s) counter for tothits
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
totalpktsrecvd	<Double>	Read-only	Total number of packets received by this service or virtual server.
pktsrecvdrate	<Double>	Read-only	Rate (/s) counter for totalpktsrecvd
totalpktssent	<Double>	Read-only	Total number of packets sent.
pktssentrate	<Double>	Read-only	Rate (/s) counter for totalpktssent
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.
invalidrequestrespon se	<Double>	Read-only	Number invalid requests/responses on this vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
invalidrequestrespon sedropped	<Double>	Read-only	Number invalid requests/responses dropped on this vserver

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/videooptimization **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/videooptimization? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get videooptimization resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/videooptimization? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "videooptimization": [ {

"vovideoopherbytesrate":<Double_value>,

Operations

(click to see Properties)

- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

GET (ALL)

URL: http:// <netscaler-ip-address> /nitro/v1/stat/vpn **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/stat/vpn? **args=detail: <Boolean_value> ,fullvalues: <Boolean_value> ,ntimes: <Integer_value> ,logfile: <String_value> ,clearstats: <String_value>**

Use this query-parameter to get vpn resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/stat/vpn? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

vpnvserver

Statistics for VPN virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the virtual server for which to show detailed statistics. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
curtotalvpnusers	<Double>	Read-only	Number of users on this vserver
cursslvpnusers	<Double>	Read-only	Number of aaa sessions on this vserver

API Reference

This documentation provides details of all operations that can be performed on the NetScaler appliance by using the REST API.

- Configuration
- Statistics
- Error Messages

service

Configuration for service resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the service. Must begin with an ASCII

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after the service has been created. Minimum length = 1
ip	<String>	Read-write	IP to assign to the service. Minimum length = 1
servername	<String>	Read-write	Name of the server that hosts the service. Minimum length = 1
servicetype	<String>	Read-write	Protocol in which data is exchanged with the service. Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, RPCSVR, DNS, ADNS, SNMP, RTSP, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ADNS_TCP, MYSQL, MSSQL, ORACLE, MONGO, MONGO_TLS, RADIUS, RADIUSListener, RDP, DIAMETER, SSL_DIAMETER, TFTP, SMPP, PPTP, GRE, SYSLOGTCP, SYSLOGUDP, FIX, SSL_FIX, USER_TCP, USER_SSL_TCP, QUIC, IPFIX, LOGSTREAM, LOGSTREAM_SSL, MQTT, MQTT_TLS, QUIC_BRIDGE, DOT, ADNS_DOT, HTTP_QUIC, ADNS_DOH, KAFKA_BROKER
port	<Integer>	Read-write	Port number of the service. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
cleartextport	<Integer>	Read-write	Port to which clear text data must be sent after the appliance decrypts incoming SSL traffic.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Applicable to transparent SSL services. Minimum value = 1
cachetype	<String>	Read-write	Cache type supported by the cache server. Possible values = TRANSPARENT, REVERSE, FORWARD
maxclient	<Integer>	Read-write	Maximum number of simultaneous open connections to the service. Minimum value = 0 Maximum value = 4294967294
healthmonitor	<String>	Read-write	Monitor the health of this service. Available settings function as follows: YES - Send probes to check the health of the service. NO - Do not send probes to check the health of the service. With the NO option, the appliance shows the service as UP at all times.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: YES Possible values = YES, NO
maxreq	<Integer>	Read-write	Maximum number of requests that can be sent on a persistent connection to the service. Note: Connection requests beyond this value are rejected. Minimum value = 0 Maximum value = 65535
cacheable	<String>	Read-write	Use the transparent cache redirection virtual server to forward requests to the cache server. Note: Do not specify this parameter if you set the Cache Type parameter. Default value: NO Possible values = YES, NO
cip	<String>	Read-write	Before forwarding a request to the service, insert an HTTP header with the client's IPv4 or IPv6 address as its

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			value. Used if the server needs the client's IP address for security, accounting, or other purposes, and setting the Use Source IP parameter is not a viable option. Possible values = ENABLED, DISABLED
cipheader	<String>	Read-write	Name for the HTTP header whose value must be set to the IP address of the client. Used with the Client IP parameter. If you set the Client IP parameter, and you do not specify a name for the header, the appliance uses the header name specified for the global Client IP Header parameter (the cipHeader parameter in the set ns param CLI command or the Client IP Header parameter in the Configure HTTP Parameters dialog box at System > Settings > Change HTTP parameters). If the global Client IP Header parameter is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			not specified, the appliance inserts a header with the name "client-ip.". Minimum length = 1
usip	<String>	Read-write	Use the client's IP address as the source IP address when initiating a connection to the server. When creating a service, if you do not set this parameter, the service inherits the global Use Source IP setting (available in the enable ns mode and disable ns mode CLI commands, or in the System > Settings > Configure modes > Configure Modes dialog box). However, you can override this setting after you create the service. Possible values = YES, NO
pathmonitor	<String>	Read-write	Path monitoring for clustering. Possible values = YES, NO
pathmonitorindv	<String>	Read-write	Individual Path monitoring decisions.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
useproxyport	<String>	Read-write	Use the proxy port as the source port when initiating connections with the server. With the NO setting, the client-side connection port is used as the source port for the server-side connection. Note: This parameter is available only when the Use Source IP (USIP) parameter is set to YES. Possible values = YES, NO
sp	<String>	Read-write	Enable surge protection for the service. Possible values = ON, OFF
rtspsessionidremap	<String>	Read-write	Enable RTSP session ID mapping for the service. Default value: OFF Possible values = ON, OFF
clttimeout	<Integer>	Read-write	Time, in seconds, after which to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			terminate an idle client connection. Minimum value = 0 Maximum value = 31536000
svrtimeout	<Integer>	Read-write	Time, in seconds, after which to terminate an idle server connection. Minimum value = 0 Maximum value = 31536000
customserverid	<String>	Read-write	Unique identifier for the service. Used when the persistency type for the virtual server is set to Custom Server ID. Default value: "None"
serverid	<Integer>	Read-write	The identifier for the service. This is used when the persistency type is set to Custom Server ID.
cka	<String>	Read-write	Enable client keep-alive for the service. Possible values = YES, NO
tcpb	<String>	Read-write	Enable TCP buffering for the service.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
cmp	<String>	Read-write	Enable compression for the service. Possible values = YES, NO
maxbandwidth	<Integer>	Read-write	Maximum bandwidth, in Kbps, allocated to the service. Minimum value = 0 Maximum value = 4294967287
accessdown	<String>	Read-write	Use Layer 2 mode to bridge the packets sent to this service if it is marked as DOWN. If the service is DOWN, and this parameter is disabled, the packets are dropped. Default value: NO Possible values = YES, NO
monthreshold	<Integer>	Read-write	Minimum sum of weights of the monitors that are bound to this service. Used to determine whether to mark a service as UP or DOWN. Minimum value = 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 65535
state	<String>	Read-write	Initial state of the service. Default value: ENABLED Possible values = ENABLED, DISABLED
downstateflush	<String>	Read-write	Flush all active transactions associated with a service whose state transitions from UP to DOWN. Do not enable this option for applications that must complete their transactions. Default value: ENABLED Possible values = ENABLED, DISABLED
tcpprofilename	<String>	Read-write	Name of the TCP profile that contains TCP configuration settings for the service. Minimum length = 1 Maximum length = 127

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httpprofilename	<String>	Read-write	Name of the HTTP profile that contains HTTP configuration settings for the service. Minimum length = 1 Maximum length = 127
contentinspectionprofilename	<String>	Read-write	Name of the ContentInspection profile that contains IPS/IDS communication related setting for the service. Minimum length = 1 Maximum length = 127
aigwprofilename	<String>	Read-write	Name of the AIGW Profile that contains AIGW Endpoint setting for the service. Minimum length = 1 Maximum length = 255
quicprofilename	<String>	Read-write	Name of QUIC profile which will be attached to the service. Minimum length = 1 Maximum length = 255

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
hashid	<Integer>	Read-write	A numerical identifier that can be used by hash based load balancing methods. Must be unique for each service. Minimum value = 1
comment	<String>	Read-write	Any information about the service.
appflowlog	<String>	Read-write	Enable logging of AppFlow information. Default value: ENABLED Possible values = ENABLED, DISABLED
netprofile	<String>	Read-write	Network profile to use for the service. Minimum length = 1 Maximum length = 127
td	<Integer>	Read-write	Integer value that uniquely identifies the traffic domain in which you want to configure the entity. If you do not specify an ID, the entity becomes part of the default traffic domain, which has an ID of 0. Minimum value = 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 4094
processlocal	<String>	Read-write	By turning on this option packets destined to a service in a cluster will not under go any steering. Turn this option for single packet request response mode or when the upstream device is performing a proper RSS for connection based distribution. Default value: DISABLED Possible values = ENABLED, DISABLED
dnsprofilename	<String>	Read-write	Name of the DNS profile to be associated with the service. DNS profile properties will applied to the transactions processed by a service. This parameter is valid only for ADNS, ADNS-TCP and ADNS-DOT services. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum length = 127
monconnectionclose	<String>	Read-write	Close monitoring connections by sending the service a connection termination message with the specified bit set. Default value: NONE Possible values = RESET, FIN
mcpprofilename	<String>	Read-write	Name of MCP profile which will be attached to the service.
ipaddress	<String>	Read-write	The new IP address of the service.
weight	<Integer>	Read-write	Weight to assign to the monitor-service binding. When a monitor is UP, the weight assigned to its binding with the service determines how much the monitor contributes toward keeping the health of the service above the value configured for the Monitor Threshold parameter. Minimum value = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 100
monitor_name_svc	<String>	Read-write	Name of the monitor bound to the specified service. Minimum length = 1
delay	<Integer>	Read-write	Time, in seconds, allocated to the NetScaler for a graceful shutdown of the service. During this period, new requests are sent to the service only for clients who already have persistent sessions on the appliance. Requests from new clients are load balanced among other available services. After the delay time expires, no requests are sent to the service, and the service is marked as unavailable (OUT OF SERVICE).
graceful	<String>	Read-write	Shut down gracefully, not accepting any new connections, and disabling the service when all of its connections are closed.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: NO Possible values = YES, NO
all	<Boolean>	Read-write	Display both user-configured and dynamically learned services.
Internal	<Boolean>	Read-write	Display only dynamically learned services.
newname	<String>	Read-write	New name for the service. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Minimum length = 1
numofconnections	<Integer>	Read-only	This will tell the number of client side connections are still open.
policyname	<String>	Read-only	The name of the policyname for which this service is bound.
serviceconftype	<Boolean>	Read-only	The configuration type of the service.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
serviceconftype2	<String>	Read-only	The configuration type of the service (Internal/Dynamic/ Configured). Possible values = Configured, Dynamic, Internal
value	<String>	Read-only	SSL status. Possible values = Certkey/ Certkeybundle/Vault not bound/Cert-store not usable, SSL feature disabled
gslb	<String>	Read-only	The GSLB option for the corresponding virtual server. Possible values = REMOTE, LOCAL
dup_state	<String>	Read-only	Added this field for getting state value from table. Possible values = ENABLED, DISABLED
publicip	<String>	Read-only	public ip.
publicport	<Integer>	Read-only	public port. Minimum value = 1 Range 1 - 65535 * in CLI is represented as

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			65535 in NITRO API
svrstate	<String>	Read-only	The state of the service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
monitor_state	<String>	Read-only	The running state of the monitor on this service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
monstatcode	<Integer>	Read-only	The code indicating the monitor response.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
lastresponse	<String>	Read-only	The string form of monstatcode.
responsetime	<Integer>	Read-only	Response time of this monitor.
monstatparam1	<Integer>	Read-only	First parameter for use with message code.
monstatparam2	<Integer>	Read-only	Second parameter for use with message code.
monstatparam3	<Integer>	Read-only	Third parameter for use with message code.
statechangetimesec	<String>	Read-only	Time when last state change happened. Seconds part.
statechangetimemsec	<Integer>	Read-only	Time at which last state change happened. Milliseconds part.
tickssincelaststatechange	<Integer>	Read-only	Time in 10 millisecond ticks since the last state change.
stateupdatereason	<Integer>	Read-only	Checks state update reason on the secondary node.
clmonowner	<Integer>	Read-only	Tells the mon owner of the service. Minimum value = 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 32
clmonview	<Integer>	Read-only	Tells the view id of the monitoring owner.
serviceipstr	<String>	Read-only	This field has been intorduced to show the dbs services ip.
oracleserverversion	<String>	Read-only	Oracle server version. Default value: 10G Possible values = 10G, 11G
nodefaultbindings	<String>	Read-only	to determine if the configuration will have default ssl CIPHER and ECC curve bindings. Default value: NO Possible values = YES, NO
monuserstatusmesg	<String>	Read-only	This field has been introduced to show user monitor failure reasons.
builtin	<String[]>	Read-only	. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
feature	<String>	Read-only	The feature to be checked while applying this config.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET
- ENABLE
- DISABLE
- GET (ALL)
- GET
- COUNT
- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

add

URL: http:// <netscaler-ip-address> /nitro/v1/config/service **HTTP Method:** POST

URL: http:// <netscaler-ip-address> /nitro/v1/config/service? **action=disable HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"service":{

<b>"name":<String_value>,

</b>"delay":<Integer_value>,

"graceful":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

rename

URL: http:// <netscaler-ip-address> /nitro/v1/config/service? **action=rename HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"service":{

<b>"name":<String_value>,

</b><b>"newname":<String_value>

</b>}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

get (all)

URL: http:// <netscaler-ip-address> /nitro/v1/config/service **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/service? **args=name: <String_value> ,all: <Boolean_value> ,Internal: <Boolean_value>**

Use this query-parameter to get service resources based on additional properties.

attrs http:// <netscaler-ip-address> /nitro/v1/config/service? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/service? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of service resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/service? **view=summary**

Use this query-parameter to get the summary output of service resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/service? **pagesize=#no;pageno=#no**

Use this query-parameter to get the service resources in chunks.

cspolicy

Configuration for content-switching policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Name for the content switching policy. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Cannot be changed after a policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			marks (for example, "my policy" or 'my policy'). Minimum length = 1
rule	<String>	Read-write	Expression, or name of a named expression, against which traffic is evaluated. The following requirements apply only to the Citrix ADC CLI: * If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation marks, escape the quotations by using the character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the double quotation marks.
action	<String>	Read-write	Content switching action that names the target load balancing virtual server to which the traffic is switched.
logaction	<String>	Read-write	The log action associated with the content switching policy.
newname	<String>	Read-write	The new name of the content switching policy. Minimum length = 1
vstype	<Integer>	Read-only	Virtual server type.
hits	<Integer>	Read-only	Total number of hits.
labelname	<String>	Read-only	Name of the label invoked.
labeltype	<String>	Read-only	The invocation type. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-only	priority of bound policy.
activepolicy	<Boolean>	Read-only	Indicates whether policy is bound or not.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-only	Location where policy is bound. Minimum length = 1
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET
- GET (ALL)
- GET
- COUNT
- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.
- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER: <username>

X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

add

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicy **HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cspolicy":{

<b>"policyname":<String_value>,

</b><b>"rule":<String_value>,

</b>"action":<String_value>,

"logaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

delete

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicy/ policyname_value<String> **HTTP Method:** DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

update

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicy **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cspolicy":{

<b>"policyname":<String_value>,

</b>"rule":<String_value>,

"action":<String_value>,

"logaction":<String_value>

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

unset

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicy? **action=unset HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cspolicy":{

<b>"policyname":<String_value>,

</b>"logaction":true

}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

rename

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicy? **action=rename HTTP Method:** POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{"cspolicy":{

<b>"policyname":<String_value>,

</b><b>"newname":<String_value>
```

```
</b>}}
```

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

get (all)

URL: http:// <netscaler-ip-address> /nitro/v1/config/cspolicy **Query-parameters: attrs** http:// <netscaler-ip-address> /nitro/v1/config/cspolicy? **attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter http:// <netscaler-ip-address> /nitro/v1/config/cspolicy? **filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of cspolicy resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

view http:// <netscaler-ip-address> /nitro/v1/config/cspolicy? **view=summary**

Use this query-parameter to get the summary output of cspolicy resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination http:// <netscaler-ip-address> /nitro/v1/config/cspolicy? **pagesize=#no;pageno=#no**

Use this query-parameter to get the cspolicy resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cspolicy": [ {

"policyname":<String_value>,

"rule":<String_value>,

"action":<String_value>,

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "cspolicy": [ { "__count": "#no"} ] }
```

csvserver

Configuration for CS virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the content switching virtual server. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Cannot be changed after the CS virtual server is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, my server or my server). Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
td	<Integer>	Read-write	Integer value that uniquely identifies the traffic domain in which you want to configure the entity. If you do not specify an ID, the entity becomes part of the default traffic domain, which has an ID of 0. Minimum value = 0 Maximum value = 4094
servicetype	<String>	Read-write	Protocol used by the virtual server. Possible values = HTTP, SSL, TCP, FTP, RTSP, SSL_TCP, UDP, DNS, SIP_UDP, SIP_TCP, SIP_SSL, ANY, RADIUS, RDP, MYSQL, MSSQL, DIAMETER, SSL_DIAMETER, DNS_TCP, ORACLE, SMPP, PROXY, MONGO, MONGO_TLS, MQTT, MQTT_TLS, HTTP_QUIC, DOT, SSL_PROXY

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ipv46	<String>	Read-write	IP address of the content switching virtual server. Minimum length = 1
targettype	<String>	Read-write	Virtual server target type. Possible values = GSLB
dnsrecordtype	<String>	Read-write	. Default value: NSGSLB_IPV4 Possible values = A, AAAA, CNAME, NAPTR
persistenceid	<Integer>	Read-write	. Minimum value = 0 Maximum value = 65535
ippattern	<String>	Read-write	IP address pattern, in dotted decimal notation, for identifying packets to be accepted by the virtual server. The IP Mask parameter specifies which part of the destination IP address is matched against the pattern. Mutually exclusive with the IP Address parameter.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			For example, if the IP pattern assigned to the virtual server is 198.51.100.0 and the IP mask is 255.255.240.0 (a forward mask), the first 20 bits in the destination IP addresses are matched with the first 20 bits in the pattern. The virtual server accepts requests with IP addresses that range from 198.51.96.1 to 198.51.111.254. You can also use a pattern such as 0.0.2.2 and a mask such as 0.0.255.255 (a reverse mask). If a destination IP address matches more than one IP pattern, the pattern with the longest match is selected, and the associated virtual server processes the request. For example, if the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			virtual servers, vs1 and vs2, have the same IP pattern, 0.0.100.128, but different IP masks of 0.0.255.255 and 0.0.224.255, a destination IP address of 198.51.100.128 has the longest match with the IP pattern of vs1. If a destination IP address matches two or more virtual servers to the same extent, the request is processed by the virtual server whose port number matches the port number in the request.
ipmask	<String>	Read-write	IP mask, in dotted decimal notation, for the IP Pattern parameter. Can have leading or trailing non-zero octets (for example, 255.255.240.0 or 0.0.255.255). Accordingly, the mask specifies whether the first n bits or the last n bits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			of the destination IP address in a client request are to be matched with the corresponding bits in the IP pattern. The former is called a forward mask. The latter is called a reverse mask.
range	<Integer>	Read-write	Number of consecutive IP addresses, starting with the address specified by the IP Address parameter, to include in a range of addresses assigned to this virtual server. Default value: 1 Minimum value = 1 Maximum value = 254
port	<Integer>	Read-write	Port number for content switching virtual server. Minimum value = 1 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ipset	<String>	Read-write	The list of IPv4/IPv6 addresses bound to ipset would form a part of listening service on the current cs vserver. Minimum length = 1
state	<String>	Read-write	Initial state of the load balancing virtual server. Default value: ENABLED Possible values = ENABLED, DISABLED
stateupdate	<String>	Read-write	Enable state updates for a specific content switching virtual server. By default, the Content Switching virtual server is always UP, regardless of the state of the Load Balancing virtual servers bound to it. This parameter interacts with the global setting as follows: Global Level | Vserver Level | Result

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ENABLED ENABLED ENABLED ENABLED DISABLED ENABLED DISABLED ENABLED ENABLED DISABLED DISABLED DISABLED If you want to enable state updates for only some content switching virtual servers, be sure to disable the state update parameter. Default value: DISABLED Possible values = ENABLED, DISABLED, UPDATEONBACKENDUPDATE
cacheable	<String>	Read-write	Use this option to specify whether a virtual server, used for load balancing or content switching,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			routes requests to the cache redirection virtual server before sending it to the configured servers. Default value: NO Possible values = YES, NO
redirecturl	<String>	Read-write	URL to which traffic is redirected if the virtual server becomes unavailable. The service type of the virtual server should be either HTTP or SSL. Caution: Make sure that the domain in the URL does not match the domain specified for a content switching policy. If it does, requests are continuously redirected to the unavailable virtual server. Minimum length = 1
clttimeout	<Integer>	Read-write	Idle time, in seconds, after which the client connection is terminated. The default values are:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			180 seconds for HTTP/SSL-based services. 9000 seconds for other TCP-based services. 120 seconds for DNS-based services. 120 seconds for other UDP-based services. Minimum value = 0 Maximum value = 31536000
precedence	<String>	Read-write	Type of precedence to use for both RULE-based and URL-based policies on the content switching virtual server. With the default (RULE) setting, incoming requests are evaluated against the rule-based content switching policies. If none of the rules match, the URL in the request is evaluated against the URL-based

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			content switching policies. Default value: RULE Possible values = RULE, URL
casesensitive	<String>	Read-write	Consider case in URLs (for policies that use URLs instead of RULES). For example, with the ON setting, the URLs /a/1.html and /A/1.HTML are treated differently and can have different targets (set by content switching policies). With the OFF setting, /a/1.html and /A/1.HTML are switched to the same target. Default value: ON Possible values = ON, OFF
somethod	<String>	Read-write	Type of spillover used to divert traffic to the backup virtual server when the primary virtual server reaches the spillover threshold. Connection spillover is based on the number of connections.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Bandwidth spillover is based on the total Kbps of incoming and outgoing traffic. Possible values = CONNECTION, DYNAMICCONNECTION, BANDWIDTH, HEALTH, LLMQUOTA, NONE
sopersistence	<String>	Read-write	Maintain source-IP based persistence on primary and backup virtual servers. Default value: DISABLED Possible values = ENABLED, DISABLED
sopersistencetimeout	<Integer>	Read-write	Time-out value, in minutes, for spillover persistence. Default value: 2 Minimum value = 2 Maximum value = 1440
sothreshold	<Integer>	Read-write	Depending on the spillover method, the maximum number of connections or the maximum total bandwidth (Kbps)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			that a virtual server can handle before spillover occurs. Minimum value = 1 Maximum value = 4294967287
sobackupaction	<String>	Read-write	Action to be performed if spillover is to take effect, but no backup chain to spillover is usable or exists. Possible values = DROP, ACCEPT, REDIRECT
redirectportrewrite	<String>	Read-write	State of port rewrite while performing HTTP redirect. Default value: DISABLED Possible values = ENABLED, DISABLED
downstateflush	<String>	Read-write	Flush all active transactions associated with a virtual server whose state transitions from UP to DOWN. Do not enable this option for applications that must complete their transactions.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: ENABLED Possible values = ENABLED, DISABLED
backupvserver	<String>	Read-write	Name of the backup virtual server that you are configuring. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Can be changed after the backup virtual server is created. You can assign a different backup virtual server or rename the existing virtual server. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			single quotation marks. Minimum length = 1
disableprimaryondown	<String>	Read-write	Continue forwarding the traffic to backup virtual server even after the primary server comes UP from the DOWN state. Default value: DISABLED Possible values = ENABLED, DISABLED
insertvserveripport	<String>	Read-write	Insert the virtual server's VIP address and port number in the request header. Available values function as follows: VIPADDR - Header contains the vserver's IP address and port number without any translation. OFF - The virtual IP and port header insertion option is disabled. V6TOV4MAPPING - Header contains the mapped IPv4

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			address corresponding to the IPv6 address of the vserver and the port number. An IPv6 address can be mapped to a user-specified IPv4 address using the set ns ip6 command. Possible values = OFF, VIPADDR, V6TOV4MAPPING
vipheader	<String>	Read-write	Name of virtual server IP and port header, for use with the VServer IP Port Insertion parameter. Minimum length = 1
rtspnat	<String>	Read-write	Enable network address translation (NAT) for real-time streaming protocol (RTSP) connections. Default value: OFF Possible values = ON, OFF
authenticationhost	<String>	Read-write	FQDN of the authentication virtual server. The service type of the virtual server should be either HTTP or SSL.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 3 Maximum length = 252
authentication	<String>	Read-write	Authenticate users who request a connection to the content switching virtual server. Default value: OFF Possible values = ON, OFF
listenpolicy	<String>	Read-write	String specifying the listen policy for the content switching virtual server. Can be either the name of an existing expression or an in-line expression. Default value: "NONE"
listenpriority	<Integer>	Read-write	Integer specifying the priority of the listen policy. A higher number specifies a lower priority. If a request matches the listen policies of more than one virtual server the virtual server whose listen policy has the highest priority (the lowest priority

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			number) accepts the request. Default value: 101 Minimum value = 0 Maximum value = 100
authn401	<String>	Read-write	Enable HTTP 401-response based authentication. Default value: OFF Possible values = ON, OFF
authnvsname	<String>	Read-write	Name of authentication virtual server that authenticates the incoming user requests to this content switching virtual server. . Minimum length = 1 Maximum length = 252
push	<String>	Read-write	Process traffic with the push virtual server that is bound to this content switching virtual server (specified by the Push VServer parameter). The service type of the push virtual server

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			should be either HTTP or SSL. Default value: DISABLED Possible values = ENABLED, DISABLED
pushvserver	<String>	Read-write	Name of the load balancing virtual server, of type PUSH or SSL_PUSH, to which the server pushes updates received on the client-facing load balancing virtual server. Minimum length = 1
pushlabel	<String>	Read-write	Expression for extracting the label from the response received from server. This string can be either an existing rule name or an inline expression. The service type of the virtual server should be either HTTP or SSL. Default value: "none"
pushmulticlients	<String>	Read-write	Allow multiple Web 2.0 connections from the same client to connect to the virtual

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			server and expect updates. Default value: NO Possible values = YES, NO
tcpprofilename	<String>	Read-write	Name of the TCP profile containing TCP configuration settings for the virtual server. Minimum length = 1 Maximum length = 127
httpprofilename	<String>	Read-write	Name of the HTTP profile containing HTTP configuration settings for the virtual server. The service type of the virtual server should be either HTTP or SSL. Minimum length = 1 Maximum length = 127
dbprofilename	<String>	Read-write	Name of the DB profile. Minimum length = 1 Maximum length = 127
oracleserverversion	<String>	Read-write	Oracle server version.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: 10G Possible values = 10G, 11G
comment	<String>	Read-write	Information about this virtual server.
mssqlserverversion	<String>	Read-write	The version of the MSSQL server. Default value: 2008R2 Possible values = 70, 2000, 2000SP1, 2005, 2008, 2008R2, 2012, 2014
l2conn	<String>	Read-write	Use L2 Parameters to identify a connection. Possible values = ON, OFF
mysqlprotocolversion	<Integer>	Read-write	The protocol version returned by the mysql vserver. Default value: 10
mysqlserverversion	<String>	Read-write	The server version string returned by the mysql vserver. Minimum length = 1 Maximum length = 31

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mysqlcharacterset	<Integer>	Read-write	The character set returned by the mysql vserver. Default value: 8
mysqlservercapabilities	<Integer>	Read-write	The server capabilities returned by the mysql vserver. Default value: 41613
appflowlog	<String>	Read-write	Enable logging appflow flow information. Default value: ENABLED Possible values = ENABLED, DISABLED
netprofile	<String>	Read-write	The name of the network profile. Minimum length = 1 Maximum length = 127
icmpvsrresponse	<String>	Read-write	Can be active or passive. Default value: PASSIVE Possible values = PASSIVE, ACTIVE
rhistate	<String>	Read-write	A host route is injected according to the setting on the virtual servers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* If set to PASSIVE on all the virtual servers that share the IP address, the appliance always injects the hostroute. * If set to ACTIVE on all the virtual servers that share the IP address, the appliance injects even if one virtual server is UP. * If set to ACTIVE on some virtual servers and PASSIVE on the others, the appliance, injects even if one virtual server set to ACTIVE is UP. Default value: PASSIVE Possible values = PASSIVE, ACTIVE
authnprofile	<String>	Read-write	Name of the authentication profile to be used when authentication is turned on.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnsprofilename	<String>	Read-write	Name of the DNS profile to be associated with the VServer. DNS profile properties will applied to the transactions processed by a VServer. This parameter is valid only for DNS and DNS-TCP VServers. Minimum length = 1 Maximum length = 127
dtls	<String>	Read-write	This option starts/stops the dtls service on the vserver. Default value: OFF Possible values = ON, OFF
persistencetype	<String>	Read-write	Type of persistence for the virtual server. Available settings function as follows: * SOURCEIP - Connections from the same client IP address belong to the same persistence session. * COOKIEINSERT - Connections that have the same

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			HTTP Cookie, inserted by a Set-Cookie directive from a server, belong to the same persistence session. * SSLSESSION - Connections that have the same SSL Session ID belong to the same persistence session. Possible values = SOURCEIP, COOKIEINSERT, SSLSESSION, NONE
persistmask	<String>	Read-write	Persistence mask for IP based persistence types, for IPv4 virtual servers. Minimum length = 1
v6persistmasklen	<Integer>	Read-write	Persistence mask for IP based persistence types, for IPv6 virtual servers. Default value: 128 Minimum value = 1 Maximum value = 128

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
timeout	<Integer>	Read-write	Time period for which a persistence session is in effect. Default value: 2 Minimum value = 0 Maximum value = 1440
cookiename	<String>	Read-write	Use this parameter to specify the cookie name for COOKIE peristence type. It specifies the name of cookie with a maximum of 32 characters. If not specified, cookie name is internally generated.
persistencebackup	<String>	Read-write	Backup persistence type for the virtual server. Becomes operational if the primary persistence mechanism fails. Possible values = SOURCEIP, NONE
backuppersistencetimeout	<Integer>	Read-write	Time period for which backup persistence is in effect. Default value: 2 Minimum value = 2

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 1440
tcpprobeport	<Integer>	Read-write	Port number for external TCP probe. NetScaler provides support for external TCP health check of the vserver status over the selected port. This option is only supported for vservers assigned with an IPAddress or ipset. Minimum value = 1 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
probeprotocol	<String>	Read-write	Citrix ADC provides support for external health check of the vserver status. Select HTTP or TCP probes for healthcheck. Possible values = TCP, HTTP
probesuccessresponsecode	<String>	Read-write	HTTP code to return in SUCCESS case. Default value: "200 OK"

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1 Maximum length = 64
probeport	<Integer>	Read-write	Citrix ADC provides support for external health check of the vserver status. Select port for HTTP/ TCP monitring. Default value: 0 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
quicprofilename	<String>	Read-write	Name of QUIC profile which will be attached to the Content Switching VServer. Minimum length = 1 Maximum length = 255
redirectfromport	<Integer>	Read-write	Port number for the virtual server, from which we absorb the traffic for http redirect. Minimum value = 1 Range 1 - 65535 * in CLI is represented as

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			65535 in NITRO API
mcpprofilename	<String>	Read-write	Name of the MCP profile to attach to this cs vserver. Enables MCP protocol processing.
dnsoverhttps	<String>	Read-write	This option is used to enable/disable DNS over HTTPS (DoH) processing. Default value: DISABLED Possible values = ENABLED, DISABLED
httpsredirecturl	<String>	Read-write	URL to which all HTTP traffic received on the port specified in the -redirectFromPort parameter is redirected.
apiprofile	<String>	Read-write	The API profile where one or more API specs are bounded to. Minimum length = 1
wasmmodule	<String>	Read-write	Name of the WASM module to assign to this virtual server.
aigwprofilename	<String>	Read-write	Name of the AIGW frontend profile. For the content switching

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			vserver to function as AI gateway, this parameter must be set. Once this parameter is set using add cs vserver, it cannot be unset. Minimum length = 1 Maximum length = 255
domainname	<String>	Read-write	Domain name for which to change the time to live (TTL) and/or backup service IP address. Minimum length = 1
ttl	<Integer>	Read-write	. Minimum value = 1
backupip	<String>	Read-write	. Minimum length = 1
cookiedomain	<String>	Read-write	. Minimum length = 1
cookietimeout	<Integer>	Read-write	. Minimum value = 0 Maximum value = 1440
sitedomainttl	<Integer>	Read-write	. Minimum value = 1
newname	<String>	Read-write	New name for the virtual server. Must begin with an ASCII alphanumeric or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my name" or 'my name'). Minimum length = 1
ip	<String>	Read-only	The IP address of the virtual server.
value	<String>	Read-only	The ssl card status for the transparent ssl cs vserver. Possible values = Certkey/ Certkeybundle/Vault not bound/Cert-store not usable, SSL feature disabled

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ngname	<String>	Read-only	Nodegroup devno to which this csvserver belongs to.
type	<String>	Read-only	Virtual server type. Possible values = CONTENT, ADDRESS
curstate	<String>	Read-only	The state of the cs vserver. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
status	<Integer>	Read-only	Status.
cachetype	<String>	Read-only	Cache type. Possible values = TRANSPARENT, REVERSE, FORWARD
redirect	<String>	Read-only	Redirect URL string. Possible values = CACHE, POLICY, ORIGIN
homepage	<String>	Read-only	Home page.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnsvservername	<String>	Read-only	DNS vserver name.
domain	<String>	Read-only	Domain.
servicename	<String>	Read-only	Service name.
weight	<Integer>	Read-only	Weight for this service.
cachevserver	<String>	Read-only	Cache vserver name.
targetvserver	<String>	Read-only	target vserver name.
url	<String>	Read-only	URL string.
bindpoint	<String>	Read-only	The bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, MQTT_JUMBO_REQ
gt2gb	<String>	Read-only	This argument has no effect. Default value: DISABLED Possible values = ENABLED, DISABLED
statechangetimesec	<String>	Read-only	Time when last state change happened. Seconds part.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
statechangetimemsec	<Integer>	Read-only	Time at which last state change happened. Milliseconds part.
tickssincelaststatechange	<Integer>	Read-only	Time in 10 millisecond ticks since the last state change.
ruletype	<Integer>	Read-only	Rule type.
lbvserver	<String>	Read-only	Name of the default lb vserver bound. Use this param for Default binding only. For Example: bind cs vserver cs1 -lbvserver lb1. Minimum length = 1
targetlbvserver	<String>	Read-only	target vserver name.
nodefaultbindings	<String>	Read-only	to determine if the configuration will have default ssl CIPHER and ECC curve bindings. Default value: NO Possible values = YES, NO
version	<Integer>	Read-only	Cookie version.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET
- ENABLE
- DISABLE
- GET (ALL)
- GET
- COUNT
- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

csvserver_cspolicy_binding

Binding object showing the cspolicy that can be bound to csvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
targetlbvserver	<String>	Read-write	target vserver name.
policyname	<String>	Read-write	Policies bound to this vserver.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
invoke	<Boolean>	Read-write	Invoke flag.
name	<String>	Read-write	Name of the content switching virtual server to which the content switching policy applies. Minimum length = 1
bindpoint	<String>	Read-write	The bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST, MQTT_JUMBO_REQ
labeltype	<String>	Read-write	The invocation type. Possible values = reqvserver, resvserver, policylabel
priority	<Integer>	Read-write	Priority for the policy.
labelname	<String>	Read-write	Name of the label invoked.
cookieipport	<String>	Read-only	Vserver id of the lb vserver that is inserted into the set-cookie HTTP header.
hits	<Integer>	Read-only	Number of hits.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pipolicyhits	<Integer>	Read-only	Number of hits.
vserverid	<String>	Read-only	Vserver Id of vserver.
rule	<String>	Read-only	Rule.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

add

URL: http:// <netscaler-ip-address /nitro/v1/config/csvserver_cspolicy_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"csvserver_cspolicy_binding":{

<b>"name":<String_value>,

</b>"policyname":<String_value>,

"targetlbvserver":<String_value>,

"priority":<Integer_value>,

"gotopriorityexpression":<String_value>,

"bindpoint":<String_value>,

"invoke":<Boolean_value>,

"labeltype":<String_value>,

"labelname":<String_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

delete

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_cspolicy_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ csvserver_cspolicy_binding/ name_value<String> ? **args=policyname: <String_value> ,bindpoint: <String_value> ,priority: <Integer_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

get

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_cspolicy_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ csvserver_cspolicy_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of csvserver_cspolicy_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/csvserver_cspolicy_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the csvserver_cspolicy_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "csvserver_cspolicy_binding": [ {

"targetlbvserver":<String_value>,

"policyname":<String_value>,

"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,

"priority":<Integer_value>,

"labelname":<String_value>,

"cookieipport":<String_value>,

"hits":<Integer_value>,

"pipolicyhits":<Integer_value>,

"vserverid":<String_value>,

"rule":<String_value>

}]}
```

get (all)

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_cspolicy_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/csvserver_cspolicy_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "csvserver_cspolicy_binding": [ {

"targetlbvserver":<String_value>,

"policyname":<String_value>,

"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,

"name":<String_value>,

"bindpoint":<String_value>,

"labeltype":<String_value>,
```

```
"priority":<Integer_value>,

"labelname":<String_value>,

"cookieipport":<String_value>,

"hits":<Integer_value>,

"pipolicyhits":<Integer_value>,

"vserverid":<String_value>,

"rule":<String_value>

}]}
```

count

URL: http:// <netscaler-ip-address> /nitro/v1/config/csvserver_cspolicy_binding/ name_value<String> ? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

{"csvserver_cspolicy_binding": [ { "__count": "#no"} ] }
```

lbvserver

Configuration for Load Balancing Virtual Server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the virtual server. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Can be changed after the virtual server is created. CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my vserver" or 'my vserver'). . Minimum length = 1
servicetype	<String>	Read-write	Protocol used by the service (also called the service type).

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, DNS, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP, RTSP, PUSH, SSL_PUSH, RADIUS, RDP, MYSQL, MSSQL, DIAMETER, SSL_DIAMETER, TFTP, ORACLE, SMPP, SYSLOGTCP, SYSLOGUDP, FIX, SSL_FIX, PROXY, USER_TCP, USER_SSL_TCP, QUIC, IPFIX, LOGSTREAM, MONGO, MONGO_TLS, MQTT, MQTT_TLS, QUIC_BRIDGE, HTTP_QUIC, DOT, SSL_PROXY, KAFKA_PRODUCER
ipv46	<String>	Read-write	IPv4 or IPv6 address to assign to the virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ippattern	<String>	Read-write	IP address pattern, in dotted decimal notation, for identifying packets to be accepted by the virtual server. The IP Mask parameter specifies which part of the destination IP address is matched against the pattern. Mutually exclusive with the IP Address parameter. For example, if the IP pattern assigned to the virtual server is 198.51.100.0 and the IP mask is 255.255.240.0 (a forward mask), the first 20 bits in the destination IP addresses are matched with the first 20 bits in the pattern. The virtual server accepts requests with IP addresses that range from 198.51.96.1 to 198.51.111.254. You can also use a pattern such as 0.0.2.2 and a mask

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			such as 0.0.255.255 (a reverse mask). If a destination IP address matches more than one IP pattern, the pattern with the longest match is selected, and the associated virtual server processes the request. For example, if virtual servers vs1 and vs2 have the same IP pattern, 0.0.100.128, but different IP masks of 0.0.255.255 and 0.0.224.255, a destination IP address of 198.51.100.128 has the longest match with the IP pattern of vs1. If a destination IP address matches two or more virtual servers to the same extent, the request is processed by the virtual server whose port number matches the port

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			number in the request.
ipmask	<String>	Read-write	IP mask, in dotted decimal notation, for the IP Pattern parameter. Can have leading or trailing non-zero octets (for example, 255.255.240.0 or 0.0.255.255). Accordingly, the mask specifies whether the first n bits or the last n bits of the destination IP address in a client request are to be matched with the corresponding bits in the IP pattern. The former is called a forward mask. The latter is called a reverse mask.
port	<Integer>	Read-write	Port number for the virtual server. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
ipset	<String>	Read-write	The list of IPv4/IPv6 addresses bound to ipset would form a part of listening

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			service on the current lb vserver. Minimum length = 1
range	<Integer>	Read-write	Number of IP addresses that the appliance must generate and assign to the virtual server. The virtual server then functions as a network virtual server, accepting traffic on any of the generated IP addresses. The IP addresses are generated automatically, as follows: * For a range of n, the last octet of the address specified by the IP Address parameter increments n-1 times. * If the last octet exceeds 255, it rolls over to 0 and the third octet increments by 1. Note: The Range parameter assigns multiple IP addresses to one virtual server. To

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			generate an array of virtual servers, each of which owns only one IP address, use brackets in the IP Address and Name parameters to specify the range. For example: add lb vserver my_vserver[1-3] HTTP 192.0.2.[1-3] 80. Default value: 1 Minimum value = 1 Maximum value = 254
persistencetype	<String>	Read-write	Type of persistence for the virtual server. Available settings function as follows: * SOURCEIP - Connections from the same client IP address belong to the same persistence session. * COOKIEINSERT - Connections that have the same HTTP Cookie, inserted by a Set-

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Cookie directive from a server, belong to the same persistence session. * SSLSESSION - Connections that have the same SSL Session ID belong to the same persistence session. * CUSTOMSERVERID - Connections with the same server ID form part of the same session. For this persistence type, set the Server ID (CustomServerID) parameter for each service and configure the Rule parameter to identify the server ID in a request. * RULE - All connections that match a user defined rule belong to the same

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			persistence session. * URLPASSIVE - Requests that have the same server ID in the URL query belong to the same persistence session. The server ID is the hexadecimal representation of the IP address and port of the service to which the request must be forwarded. This persistence type requires a rule to identify the server ID in the request. * DESTIP - Connections to the same destination IP address belong to the same persistence session. * SRCIPDESTIP - Connections that have the same source IP address and destination IP address belong to the same

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			persistence session. * CALLID - Connections that have the same CALL-ID SIP header belong to the same persistence session. * RTSPSID - Connections that have the same RTSP Session ID belong to the same persistence session. * FIXSESSION - Connections that have the same SenderCompID and TargetCompID values belong to the same persistence session. * USERSESSION - Persistence session is created based on the persistence parameter value provided from an extension.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = SOURCEIP, COOKIEINSERT, SSLSESSION, RULE, URLPASSIVE, CUSTOMSERVERID, DESTIP, SRCIPDESTIP, CALLID, RTSPSID, DIAMETER, FIXSESSION, USERSESSION, NONE
timeout	<Integer>	Read-write	Time period for which a persistence session is in effect. Default value: 2 Minimum value = 0 Maximum value = 1440
persistencebackup	<String>	Read-write	Backup persistence type for the virtual server. Becomes operational if the primary persistence mechanism fails. Possible values = SOURCEIP, NONE
backuppersistencetimeout	<Integer>	Read-write	Time period for which backup persistence is in effect.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: 2 Minimum value = 2 Maximum value = 1440
lbmethod	<String>	Read-write	Load balancing method. The available settings function as follows: * ROUNDROBIN - Distribute requests in rotation, regardless of the load. Weights can be assigned to services to enforce weighted round robin distribution. * LEASTCONNECTION (default) - Select the service with the fewest connections. * LEASTRESPONSETIME - Select the service with the lowest average response time. * LEASTBANDWIDTH - Select the service currently

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			handling the least traffic. * LEASTPACKETS - Select the service currently serving the lowest number of packets per second. * CUSTOMLOAD - Base service selection on the SNMP metrics obtained by custom load monitors. * LRTM - Select the service with the lowest response time. Response times are learned through monitoring probes. This method also takes the number of active connections into account. Also available are a number of hashing methods, in which the appliance extracts a predetermined portion of the request, creates a hash of the portion,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			and then checks whether any previous requests had the same hash value. If it finds a match, it forwards the request to the service that served those previous requests. Following are the hashing methods: * URLHASH - Create a hash of the request URL (or part of the URL). * DOMAINHASH - Create a hash of the domain name in the request (or part of the domain name). The domain name is taken from either the URL or the Host header. If the domain name appears in both locations, the URL is preferred. If the request does not contain a domain name, the load balancing method defaults to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			LEASTCONNECTION. * DESTINATIONIPHASH - Create a hash of the destination IP address in the IP header. * SOURCEIPHASH - Create a hash of the source IP address in the IP header. * TOKEN - Extract a token from the request, create a hash of the token, and then select the service to which any previous requests with the same token hash value were sent. * SRCIPDESTIPHASH - Create a hash of the string obtained by concatenating the source IP address and destination IP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			address in the IP header. * SRCIPSRCPORTHASH - Create a hash of the source IP address and source port in the IP header. * CALLIDHASH - Create a hash of the SIP Call-ID header. * USER_TOKEN - Same as TOKEN LB method but token needs to be provided from an extension. * LEASTLLMTOKENLATENCY - Select the service with the least LLM token latency. Default value: LEASTCONNECTION Possible values = ROUNDROBIN, LEASTCONNECTION,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			LEASTRESPONSETIME, URLHASH, DOMAINHASH, DESTINATIONIPHASH, SOURCEIPHASH, SRCIPDESTIPHASH, LEASTBANDWIDTH, LEASTPACKETS, TOKEN, SRCIPSRCPORTHASH, LRTM, CALLIDHASH, CUSTOMLOAD, LEASTREQUEST, AUDITLOGHASH, STATICPROXIMITY, USER_TOKEN, LEASTLLMTOKEN LATENCY
hashlength	<Integer>	Read-write	Number of bytes to consider for the hash value used in the URLHASH and DOMAINHASH load balancing methods. Default value: 80 Minimum value = 1 Maximum value = 4096
netmask	<String>	Read-write	IPv4 subnet mask to apply to the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			destination IP address or source IP address when the load balancing method is DESTINATIONIPHASH or SOURCEIPHASH. Minimum length = 1
v6netmasklen	<Integer>	Read-write	Number of bits to consider in an IPv6 destination or source IP address, for creating the hash that is required by the DESTINATIONIPHASH and SOURCEIPHASH load balancing methods. Default value: 128 Minimum value = 1 Maximum value = 128
backuplbmethod	<String>	Read-write	Backup load balancing method. Becomes operational if the primary load balancing me thod fails or cannot be used. Valid only if the primary method is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			based on static proximity. Default value: ROUNDROBIN Possible values = ROUNDROBIN, LEASTCONNECTION, LEASTRESPONSETIME, SOURCEIPHASH, LEASTBANDWIDTH, LEASTPACKETS, CUSTOMLOAD
aigwprofilename	<String>	Read-write	Name of the AIGW frontend profile. For the LB vserver to function as AI gateway, this parameter must be set. Once this parameter is set using add lb vserver, it cannot be unset. Minimum length = 1 Maximum length = 255
cookiename	<String>	Read-write	Use this parameter to specify the cookie name for COOKIE peristence type. It specifies the name of cookie with a maximum of 32

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			characters. If not specified, cookie name is internally generated.
rule	<String>	Read-write	Expression, or name of a named expression, against which traffic is evaluated. The following requirements apply only to the Citrix ADC CLI: * If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation marks, escape the quotations by using the \ character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the double quotation marks. Default value: "none"
listenpolicy	<String>	Read-write	Expression identifying traffic accepted by the virtual server. Can be either an expression (for example, CLIENT.IP.DST.IN_SUBNET(192.0.2.0/24) or the name of a named expression. In the above example, the virtual server accepts all requests whose destination IP address is in the 192.0.2.0/24 subnet. Default value: "NONE"
listenpriority	<Integer>	Read-write	Integer specifying the priority of the listen policy. A higher number specifies a lower priority. If a request matches the listen policies of more than one virtual server the virtual server whose listen policy has the highest priority (the lowest priority

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			number) accepts the request. Default value: 101 Minimum value = 0 Maximum value = 101
resrule	<String>	Read-write	Expression specifying which part of a server's response to use for creating rule based persistence sessions (persistence type RULE). Can be either an expression or the name of a named expression. Example: HTTP.RES.HEADER("setcookie").VALUE(0).TYPECAST_NVLIST_T('=',';').VALUE("server1"). Default value: "none"
persistmask	<String>	Read-write	Persistence mask for IP based persistence types, for IPv4 virtual servers. Minimum length = 1
v6persistmasklen	<Integer>	Read-write	Persistence mask for IP based persistence

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			types, for IPv6 virtual servers. Default value: 128 Minimum value = 1 Maximum value = 128
rtspnat	<String>	Read-write	Use network address translation (NAT) for RTSP data connections. Default value: OFF Possible values = ON, OFF
m	<String>	Read-write	Redirection mode for load balancing. Available settings function as follows: * IP - Before forwarding a request to a server, change the destination IP address to the server's IP address. * MAC - Before forwarding a request to a server, change the destination MAC address to the server's MAC address. The destination IP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			address is not changed. MAC-based redirection mode is used mostly in firewall load balancing deployments. * IPTUNNEL - Perform IP-in-IP encapsulation for client IP packets. In the outer IP headers, set the destination IP address to the IP address of the server and the source IP address to the subnet IP (SNIP). The client IP packets are not modified. Applicable to both IPv4 and IPv6 packets. * TOS - Encode the virtual server's TOS ID in the TOS field of the IP header. You can use either the IPTUNNEL or the TOS option to implement Direct

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Server Return (DSR). Default value: IP Possible values = IP, MAC, IPTUNNEL, TOS
tosid	<Integer>	Read-write	TOS ID of the virtual server. Applicable only when the load balancing redirection mode is set to TOS. Minimum value = 1 Maximum value = 63
datalength	<Integer>	Read-write	Length of the token to be extracted from the data segment of an incoming packet, for use in the token method of load balancing. The length of the token, specified in bytes, must not be greater than 24 KB. Applicable to virtual servers of type TCP. Minimum value = 1 Maximum value = 100
dataoffset	<Integer>	Read-write	Offset to be considered when extracting a token from the TCP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			payload. Applicable to virtual servers, of type TCP, using the token method of load balancing. Must be within the first 24 KB of the TCP payload. Minimum value = 0 Maximum value = 25400
sessionless	<String>	Read-write	Perform load balancing on a per-packet basis, without establishing sessions. Recommended for load balancing of intrusion detection system (IDS) servers and scenarios involving direct server return (DSR), where session information is unnecessary. Default value: DISABLED Possible values = ENABLED, DISABLED
trofspersistence	<String>	Read-write	When value is ENABLED, Trofs persistence is honored. When value is DISABLED,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Trofs persistence is not honored. Default value: ENABLED Possible values = ENABLED, DISABLED
state	<String>	Read-write	State of the load balancing virtual server. Default value: ENABLED Possible values = ENABLED, DISABLED
connfailover	<String>	Read-write	Mode in which the connection failover feature must operate for the virtual server. After a failover, established TCP connections and UDP packet flows are kept active and resumed on the secondary appliance. Clients remain connected to the same servers. Available settings function as follows: * STATEFUL - The primary appliance shares state information with the secondary

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			appliance, in real time, resulting in some runtime processing overhead. * STATELESS - State information is not shared, and the new primary appliance tries to re-create the packet flow on the basis of the information contained in the packets it receives. * DISABLED - Connection failover does not occur. Default value: DISABLED Possible values = DISABLED, STATEFUL, STATELESS
redirurl	<String>	Read-write	URL to which to redirect traffic if the virtual server becomes unavailable. WARNING! Make sure that the domain in the URL does not match the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			domain specified for a content switching policy. If it does, requests are continuously redirected to the unavailable virtual server. Minimum length = 1
cacheable	<String>	Read-write	Route cacheable requests to a cache redirection virtual server. The load balancing virtual server can forward requests only to a transparent cache redirection virtual server that has an IP address and port combination of *:80, so such a cache redirection virtual server must be configured on the appliance. Default value: NO Possible values = YES, NO
clttimeout	<Integer>	Read-write	Idle time, in seconds, after which a client connection is terminated. Minimum value = 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 31536000
somethod	<String>	Read-write	Type of threshold that, when exceeded, triggers spillover. Available settings function as follows: * CONNECTION - Spillover occurs when the number of client connections exceeds the threshold. * DYNAMICCONNECTION - Spillover occurs when the number of client connections at the virtual server exceeds the sum of the maximum client (Max Clients) settings for bound services. Do not specify a spillover threshold for this setting, because the threshold is implied by the Max Clients settings of bound services.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* BANDWIDTH - Spillover occurs when the bandwidth consumed by the virtual server's incoming and outgoing traffic exceeds the threshold. * HEALTH - Spillover occurs when the percentage of weights of the services that are UP drops below the threshold. For example, if services svc1, svc2, and svc3 are bound to a virtual server, with weights 1, 2, and 3, and the spillover threshold is 50%, spillover occurs if svc1 and svc3 or svc2 and svc3 transition to DOWN. * LLMQUOTA - Spillover occurs when the LLM token quota of all the services bound the vserver is exhausted. Do not

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			specify a spillover threshold for this setting, because the threshold is implied by the max tokens settings on the bound services. * NONE - Spillover does not occur. Possible values = CONNECTION, DYNAMICCONNECTION, BANDWIDTH, HEALTH, LLMQUOTA, NONE
sopersistence	<String>	Read-write	If spillover occurs, maintain source IP address based persistence for both primary and backup virtual servers. Default value: DISABLED Possible values = ENABLED, DISABLED
sopersistencetimeout	<Integer>	Read-write	Timeout for spillover persistence, in minutes. Default value: 2 Minimum value = 2

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum value = 1440
healththreshold	<Integer>	Read-write	Threshold in percent of active services below which vserver state is made down. If this threshold is 0, vserver state will be up even if one bound service is up. Default value: 0 Minimum value = 0 Maximum value = 100
sothreshold	<Integer>	Read-write	Threshold at which spillover occurs. Specify an integer for the CONNECTION spillover method, a bandwidth value in kilobits per second for the BANDWIDTH method (do not enter the units), or a percentage for the HEALTH method (do not enter the percentage symbol). Minimum value = 1 Maximum value = 4294967287
sobackupaction	<String>	Read-write	Action to be performed if spillover is to take effect, but no backup chain to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			spillover is usable or exists. Possible values = DROP, ACCEPT, REDIRECT
redirectportrewrite	<String>	Read-write	Rewrite the port and change the protocol to ensure successful HTTP redirects from services. Default value: DISABLED Possible values = ENABLED, DISABLED
downstateflush	<String>	Read-write	Flush all active transactions associated with a virtual server whose state transitions from UP to DOWN. Do not enable this option for applications that must complete their transactions. Default value: ENABLED Possible values = ENABLED, DISABLED
backupvserver	<String>	Read-write	Name of the backup virtual server to which to forward requests if the primary virtual server

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			goes DOWN or reaches its spillover threshold. Minimum length = 1
disableprimaryondown	<String>	Read-write	If the primary virtual server goes down, do not allow it to return to primary status until manually enabled. Default value: DISABLED Possible values = ENABLED, DISABLED
insertvserveripport	<String>	Read-write	Insert an HTTP header, whose value is the IP address and port number of the virtual server, before forwarding a request to the server. The format of the header is <vipHeader>: <virtual server IP address>_<port number >, where vipHeader is the name that you specify for the header. If the virtual server has an IPv6 address, the address in the header is enclosed in brackets ([and]) to separate it from the port number. If you have

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			mapped an IPv4 address to a virtual server's IPv6 address, the value of this parameter determines which IP address is inserted in the header, as follows: * VIPADDR - Insert the IP address of the virtual server in the HTTP header regardless of whether the virtual server has an IPv4 address or an IPv6 address. A mapped IPv4 address, if configured, is ignored. * V6TOV4MAPPING - Insert the IPv4 address that is mapped to the virtual server's IPv6 address. If a mapped IPv4 address is not configured, insert the IPv6 address. * OFF - Disable header insertion.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = OFF, VIPADDR, V6TOV4MAPPING
vipheader	<String>	Read-write	Name for the inserted header. The default name is vip-header. Minimum length = 1
authenticationhost	<String>	Read-write	Fully qualified domain name (FQDN) of the authentication virtual server to which the user must be redirected for authentication. Make sure that the Authentication parameter is set to ENABLED. Minimum length = 3 Maximum length = 252
authentication	<String>	Read-write	Enable or disable user authentication. Default value: OFF Possible values = ON, OFF
authn401	<String>	Read-write	Enable or disable user authentication with HTTP 401 responses. Default value: OFF

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ON, OFF
authnvsname	<String>	Read-write	Name of an authentication virtual server with which to authenticate users. Minimum length = 1 Maximum length = 252
push	<String>	Read-write	Process traffic with the push virtual server that is bound to this load balancing virtual server. Default value: DISABLED Possible values = ENABLED, DISABLED
pushvserver	<String>	Read-write	Name of the load balancing virtual server, of type PUSH or SSL_PUSH, to which the server pushes updates received on the load balancing virtual server that you are configuring. Minimum length = 1
pushlabel	<String>	Read-write	Expression for extracting a label from the server's response. Can be either an expression

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			or the name of a named expression. Default value: "none"
pushmulticlients	<String>	Read-write	Allow multiple Web 2.0 connections from the same client to connect to the virtual server and expect updates. Default value: NO Possible values = YES, NO
tcpprofilename	<String>	Read-write	Name of the TCP profile whose settings are to be applied to the virtual server. Minimum length = 1 Maximum length = 127
httpprofilename	<String>	Read-write	Name of the HTTP profile whose settings are to be applied to the virtual server. Minimum length = 1 Maximum length = 127
dbprofilename	<String>	Read-write	Name of the DB profile whose settings are to be

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			applied to the virtual server. Minimum length = 1 Maximum length = 127
mcpprofilename	<String>	Read-write	Name of the MCP profile to attach to this lb vserver. Enables MCP protocol processing.
comment	<String>	Read-write	Any comments that you might want to associate with the virtual server.
l2conn	<String>	Read-write	Use Layer 2 parameters (channel number, MAC address, and VLAN ID) in addition to the 4-tuple (<source IP>:<source port>::<destination IP>:<destination port>) that is used to identify a connection. Allows multiple TCP and non-TCP connections with the same 4-tuple to co-exist on the Citrix ADC. Possible values = ON, OFF
oracleserverversion	<String>	Read-write	Oracle server version.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: 10G Possible values = 10G, 11G
mssqlserverversion	<String>	Read-write	For a load balancing virtual server of type MSSQL, the Microsoft SQL Server version. Set this parameter if you expect some clients to run a version different from the version of the database. This setting provides compatibility between the client-side and server-side connections by ensuring that all communication conforms to the server's version. Default value: 2008R2 Possible values = 70, 2000, 2000SP1, 2005, 2008, 2008R2, 2012, 2014
mysqlprotocolversion	<Integer>	Read-write	MySQL protocol version that the virtual server advertises to clients.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mysqlserverversion	<String>	Read-write	MySQL server version string that the virtual server advertises to clients. Minimum length = 1 Maximum length = 31
mysqlcharacterset	<Integer>	Read-write	Character set that the virtual server advertises to clients.
mysqlservercapabilities	<Integer>	Read-write	Server capabilities that the virtual server advertises to clients.
appflowlog	<String>	Read-write	Apply AppFlow logging to the virtual server. Default value: ENABLED Possible values = ENABLED, DISABLED
netprofile	<String>	Read-write	Name of the network profile to associate with the virtual server. If you set this parameter, the virtual server uses only the IP addresses in the network profile as source IP addresses when initiating connections with servers.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1 Maximum length = 127
icmpvsrresponse	<String>	Read-write	How the Citrix ADC responds to ping requests received for an IP address that is common to one or more virtual servers. Available settings function as follows: * If set to PASSIVE on all the virtual servers that share the IP address, the appliance always responds to the ping requests. * If set to ACTIVE on all the virtual servers that share the IP address, the appliance responds to the ping requests if at least one of the virtual servers is UP. Otherwise, the appliance does not respond. * If set to ACTIVE on some virtual servers and PASSIVE on the others, the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			appliance responds if at least one virtual server with the ACTIVE setting is UP. Otherwise, the appliance does not respond. Note: This parameter is available at the virtual server level. A similar parameter, ICMP Response, is available at the IP address level, for IPv4 addresses of type VIP. To set that parameter, use the add ip command in the CLI or the Create IP dialog box in the GUI. Default value: PASSIVE Possible values = PASSIVE, ACTIVE
rhistate	<String>	Read-write	Route Health Injection (RHI) functionality of the NetSaler appliance for advertising the route of the VIP address associated with the virtual

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			server. When Vserver RHI Level (RHI) parameter is set to VSVR_CNTRLD, the following are different RHI behaviors for the VIP address on the basis of RHIstate (RHI STATE) settings on the virtual servers associated with the VIP address: * If you set RHI STATE to PASSIVE on all virtual servers, the Citrix ADC always advertises the route for the VIP address. * If you set RHI STATE to ACTIVE on all virtual servers, the Citrix ADC advertises the route for the VIP address if at least one of the associated virtual servers is in UP state. * If you set RHI STATE to ACTIVE on some and PASSIVE on others,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the Citrix ADC advertises the route for the VIP address if at least one of the associated virtual servers, whose RHI STATE set to ACTIVE, is in UP state. Default value: PASSIVE Possible values = PASSIVE, ACTIVE
newservicerequest	<Integer>	Read-write	Number of requests, or percentage of the load on existing services, by which to increase the load on a new service at each interval in slow-start mode. A non-zero value indicates that slow-start is applicable. A zero value indicates that the global RR startup parameter is applied. Changing the value to zero will cause services currently in slow start to take the full traffic as determined by the LB method. Subsequently, any new services added

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			will use the global RR factor. Default value: 0
newservicerequestunit	<String>	Read-write	Units in which to increment load at each interval in slow-start mode. Default value: PER_SECOND Possible values = PER_SECOND, PERCENT
newservicerequestincrementinterval	<Integer>	Read-write	Interval, in seconds, between successive increments in the load on a new service or a service whose state has just changed from DOWN to UP. A value of 0 (zero) specifies manual slow start. Default value: 0 Minimum value = 0 Maximum value = 3600
minautoscalemembers	<Integer>	Read-write	Minimum number of members expected to be present when vserver is used in Autoscale. Default value: 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 0 Maximum value = 5000
maxautoscalemembers	<Integer>	Read-write	Maximum number of members expected to be present when vserver is used in Autoscale. Default value: 0 Minimum value = 0 Maximum value = 5000
persistavpno	<Integer[]>	Read-write	Persist AVP number for Diameter Persistency. In case this AVP is not defined in Base RFC 3588 and it is nested inside a Grouped AVP, define a sequence of AVP numbers (max 3) in order of parent to child. So say persist AVP number X is nested inside AVP Y which is nested in Z, then define the list as Z Y X. Minimum value = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
skippersistency	<String>	Read-write	This argument decides the behavior incase the service which is selected from an existing persistence session has reached threshold. Default value: None Possible values = Bypass, ReLb, None
td	<Integer>	Read-write	Integer value that uniquely identifies the traffic domain in which you want to configure the entity. If you do not specify an ID, the entity becomes part of the default traffic domain, which has an ID of 0. Minimum value = 0 Maximum value = 4094
authnprofile	<String>	Read-write	Name of the authentication profile to be used when authentication is turned on.
macmoderetainvlan	<String>	Read-write	This option is used to retain vlan information of incoming packet

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			when macmode is enabled. Default value: DISABLED Possible values = ENABLED, DISABLED
dbslb	<String>	Read-write	Enable database specific load balancing for MySQL and MSSQL service types. Default value: DISABLED Possible values = ENABLED, DISABLED
dns64	<String>	Read-write	This argument is for enabling/disabling the dns64 on lbvserver. Possible values = ENABLED, DISABLED
bypassaaaa	<String>	Read-write	If this option is enabled while resolving DNS64 query AAAA queries are not sent to back end dns server. Default value: NO Possible values = YES, NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
recursionavailable	<String>	Read-write	When set to YES, this option causes the DNS replies from this vserver to have the RA bit turned on. Typically one would set this option to YES, when the vserver is load balancing a set of DNS servers thatsupport recursive queries. Default value: NO Possible values = YES, NO
processlocal	<String>	Read-write	By turning on this option packets destined to a vserver in a cluster will not under go any steering. Turn this option for single packet request response mode or when the upstream device is performing a proper RSS for connection based distribution. Default value: DISABLED Possible values = ENABLED, DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnsprofilename	<String>	Read-write	Name of the DNS profile to be associated with the VServer. DNS profile properties will be applied to the transactions processed by a VServer. This parameter is valid only for DNS and DNS-TCP VServers. Minimum length = 1 Maximum length = 127
lbprofilename	<String>	Read-write	Name of the LB profile which is associated to the vserver.
redirectfromport	<Integer>	Read-write	Port number for the virtual server, from which we absorb the traffic for http redirect. Minimum value = 1 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
httpsredirecturl	<String>	Read-write	URL to which all HTTP traffic received on the port specified in the -redirectFromPort

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			parameter is redirected.
retainconnectionsoncluster	<String>	Read-write	This option enables you to retain existing connections on a node joining a Cluster system or when a node is being configured for passive timeout. By default, this option is disabled. Default value: NO Possible values = YES, NO
adfsproxyprofile	<String>	Read-write	Name of the adfsProxy profile to be used to support ADFSPIP protocol for ADFS servers.
tcpprobeport	<Integer>	Read-write	Port number for external TCP probe. NetScaler provides support for external TCP health check of the vserver status over the selected port. This option is only supported for vservers assigned with an IPAddress or ipset. Minimum value = 1 Range 1 - 65535

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* in CLI is represented as 65535 in NITRO API
quicprofilename	<String>	Read-write	Name of QUIC profile which will be attached to the VServer. Minimum length = 1 Maximum length = 255
quicbridgeprofilename	<String>	Read-write	Name of the QUIC Bridge profile whose settings are to be applied to the virtual server. Minimum length = 1 Maximum length = 127
probeprotocol	<String>	Read-write	Citrix ADC provides support for external health check of the vserver status. Select HTTP or TCP probes for healthcheck. Possible values = TCP, HTTP
probesuccessresponsecode	<String>	Read-write	HTTP code to return in SUCCESS case. Default value: "200 OK"

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1 Maximum length = 64
probeport	<Integer>	Read-write	Citrix ADC provides support for external health check of the vserver status. Select port for HTTP/ TCP monitring. Default value: 0 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
toggleorder	<String>	Read-write	Configure this option to toggle order preference. Default value: ASCENDING Possible values = ASCENDING, DESCENDING
orderthreshold	<Integer>	Read-write	This option is used to to specify the threshold of minimum number of services to be UP in an order, for it to be considered in Lb decision. Default value: 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 0 Maximum value = 100
apiprofile	<String>	Read-write	The API profile where one or more API specs are bounded to. Minimum length = 1
dnsoverhttps	<String>	Read-write	This option is used to enable/disable DNS over HTTPS (DoH) processing. Default value: DISABLED Possible values = ENABLED, DISABLED
wasmmodule	<String>	Read-write	Name of the WASM module to assign to this virtual server.
servicename	<String>	Read-write	Service to bind to the virtual server. Minimum length = 1
weight	<Integer>	Read-write	Weight to assign to the specified service. Minimum value = 1 Maximum value = 100
order	<Integer>	Read-write	Order number to be assigned to the service when it is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			bound to the lb vserver. Minimum value = 1 Maximum value = 8192
redirurlflags	<Boolean>	Read-write	The redirect URL to be unset.
newname	<String>	Read-write	New name for the virtual server. Minimum length = 1
value	<String>	Read-only	SSL status. Possible values = Certkey/ Certkeybundle/Vault not bound/Cert-store not usable, SSL feature disabled
ipmapping	<String>	Read-only	The permanent mapping for the V6 Address.
ngname	<String>	Read-only	Nodegroup name to which this lbvsever belongs to.
type	<String>	Read-only	Type of LB vserver. Possible values = CONTENT, ADDRESS
curstate	<String>	Read-only	Current LB vserver state.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
effectivestate	<String>	Read-only	Effective state of the LB vserver , based on the state of backup vservers. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
status	<Integer>	Read-only	Current status of the lb vserver. During the initial phase if the configured lb method is not round robin , the vserver will adopt round robin to distribute traffic for a predefined number of requests.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
lbrrreason	<Integer>	Read-only	Reason why a vserver is in RR. The following are the reasons: 1 - MEP is DOWN (GSLB) 2 - LB method has changed 3 - Bound service's state changed to UP 4 - A new service is bound 5 - Startup RR factor has changed 6 - LB feature is enabled 7 - Load monitor is not active on a service 8 - Vserver is Enabled 9 - SSL feature is Enabled 10 - All bound services have reached threshold. Using effective state to load balance (GSLB)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			11 - Primary state of bound services are not UP. Using effective state to load balance (GSLB) 12 - No LB decision can be made as all bound services have either reached threshold or are not UP (GSLB) 13 - All load monitors are active .
redirect	<String>	Read-only	Cache redirect type. Possible values = CACHE, POLICY, ORIGIN
precedence	<String>	Read-only	Precedence. Possible values = RULE, URL
homepage	<String>	Read-only	Home page.
dnsvservername	<String>	Read-only	DNS vserver name.
domain	<String>	Read-only	Domain.
cachevserver	<String>	Read-only	Cache virtual server.
health	<Integer>	Read-only	Health of vserver based on percentage of weights of active svcs/all svcs. This

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			does not consider administratively disabled svcs.
ruletype	<Integer>	Read-only	Rule type.
groupname	<String>	Read-only	LB group to which the lb vserver is to be bound.
cookiedomain	<String>	Read-only	Domain name to be used in the set cookie header in case of cookie persistence.
map	<String>	Read-only	Map. Possible values = ON, OFF
gt2gb	<String>	Read-only	Allow for greater than 2 GB transactions on this vserver. Default value: DISABLED Possible values = ENABLED, DISABLED
consolidatedlconn	<String>	Read-only	Use consolidated stats for LeastConnection. Default value: GLOBAL Possible values = GLOBAL, NO, YES

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
consolidatedlconngbl	<String>	Read-only	Fetches Global setting. Possible values = YES, NO
thresholdvalue	<Integer>	Read-only	Tells whether threshold exceeded for this service participating in CUSTOMLB.
bindpoint	<String>	Read-only	The bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, MQTT_JUMBO_REQ
version	<Integer>	Read-only	Cookie version.
totalservices	<Integer>	Read-only	Total number of services bound to the vserver.
activeservices	<Integer>	Read-only	Total number of active services bound to the vserver.
statechangetimesec	<String>	Read-only	Time when last state change happened. Seconds part.
statechangetimeseconds	<Integer>	Read-only	Time when last state change happened. Seconds part.
statechangetimemsec	<Integer>	Read-only	Time at which last state change

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			happened. Milliseconds part.
tickssincelaststatechange	<Integer>	Read-only	Time in 10 millisecond ticks since the last state change.
isgslb	<Boolean>	Read-only	This field is set to true if it is a GSLBVserver.
vsvrdynconnsothreshold	<Integer>	Read-only	Spillover threshold for dynamic connection.
backupvserverstatus	<String>	Read-only	Staus of BackUp Vserver .
nodefaultbindings	<String>	Read-only	to determine if the configuration will have default ssl CIPHER and ECC curve bindings. Default value: NO Possible values = YES, NO
currentactiveorder	<String>	Read-only	current order that takes the traffic in case service or servicegroup is bound with order.
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

- ADD
- DELETE
- UPDATE
- UNSET
- ENABLE
- DISABLE
- GET (ALL)
- GET
- COUNT
- RENAME

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

add

count

URL: http:// <netscaler-ip-address> /nitro/v1/config/lbvserver? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "lbvserver": [ { "__count": "#no"} ] }
```

lbvserver_service_binding

Binding object showing the service that can be bound to lbvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
weight	<Integer>	Read-write	Weight to assign to the specified service. Minimum value = 1 Maximum value = 100
servicegroupname	<String>	Read-write	Name of the service group. Minimum length = 1
name	<String>	Read-write	Name for the virtual server. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Can be changed after the virtual server is created.

CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my vserver" or 'my vserver'). .

Minimum length = 1

Minimum value = 1

Maximum value = 8192

Minimum length = 1

Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED

Range 1 - 65535

* in CLI is represented as 65535 in NITRO API

Possible values = HTTP, FTP, TCP, UDP, SSL, SSL_BRIDGE, SSL_TCP, DTLS, NNTP, DNS, DHCPRA, ANY, SIP_UDP, SIP_TCP, SIP_SSL, DNS_TCP, RTSP, PUSH, SSL_PUSH, RADIUS, RDP, MYSQL, MSSQL, DIAMETER, SSL_DIAMETER, TFTP, ORACLE, SMPP, SYSLOGTCP, SYSLOGUDP, FIX, SSL_FIX, PROXY, USER_TCP, USER_SSL_TCP, QUIC, IPFIX, LOGSTREAM, MONGO, MONGO_TLS, MQTT, MQTT_TLS, QUIC_BRIDGE, HTTP_QUIC, DOT, SSL_PROXY, KAFKA_PRODUCER

Range 1 - 65535

* in CLI is represented as 65535 in NITRO API

Operations

(click to see Properties)

- ADD
- DELETE
- GET
- GET (ALL)
- COUNT

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

add

URL: http:// <netscaler-ip-address /nitro/v1/config/lbvserver_service_binding **HTTP Method:** PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Content-Type:application/json

Request Payload:

```
{

"lbvserver_service_binding":{

<b>"name":<String_value>,
```

```
</b>"servicename":<String_value>,

"weight":<Integer_value>,

"servicegroupname":<String_value>,

"order":<Integer_value>

}}
```

Response: HTTP Status Code on Success: 201 Created

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

delete

URL: http:// <netscaler-ip-address> /nitro/v1/config/lbvserver_service_binding/ name_value<String> **Query-parameters: args** http:// <netscaler-ip-address> /nitro/v1/config/ lbvserver_service_binding/ name_value<String> ? **args=servicename: <String_value> ,servicegroupname: <String_value>**

HTTP Method: DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

get

URL: http:// <netscaler-ip-address> /nitro/v1/config/lbvserver_service_binding/ name_value<String> **Query-parameters: filter** http:// <netscaler-ip-address> /nitro/v1/config/ lbvserver_service_binding/ name_value<String> ? **filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of lbvserver_service_binding resources configured on NetScaler.Filtering can be done on any of the properties of the resource.

pagination http:// <netscaler-ip-address> /nitro/v1/config/lbvserver_service_binding/ name_value<String> ? **pagesize=#no;pageno=#no**

Use this query-parameter to get the lbvserver_service_binding resources in chunks.

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "lbvserver_service_binding": [ {

"weight":<Integer_value>,

"servicegroupname":<String_value>,

"name":<String_value>,

"order":<Integer_value>,

"servicename":<String_value>,

"vserverid":<String_value>,

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{"lbvserver_service_binding": [ { "__count": "#no"} ] }
```

sslcertkey

Configuration for certificate key resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
certkey	<String>	Read-write	Name for the certificate and private-key pair. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after the certificate-key pair is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my cert" or 'my cert'). Minimum length = 1
cert	<String>	Read-write	Name of and, optionally, path to the X509 certificate file that is used to form the certificate-key pair. The certificate file should be present on the appliance's hard-disk drive or solid-state drive. Storing a certificate in any location other than the default might cause inconsistency

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			in a high availability setup. /nsconfig/ssl/ is the default path. Minimum length = 1
key	<String>	Read-write	Name of and, optionally, path to the private-key file that is used to form the certificate-key pair. The certificate file should be present on the appliance's hard-disk drive or solid-state drive. Storing a certificate in any location other than the default might cause inconsistency in a high availability setup. /nsconfig/ssl/ is the default path. Minimum length = 1
password	<Boolean>	Read-write	Passphrase that was used to encrypt the private-key. Use this option to load encrypted private-keys in PEM format.
fipskey	<String>	Read-write	Name of the FIPS key that was created inside the Hardware Security Module (HSM) of a FIPS appliance, or a key that was imported into the HSM. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
hsmkey	<String>	Read-write	Name of the HSM key that was created in the External Hardware Security Module (HSM) of a FIPS appliance. Minimum length = 1
inform	<String>	Read-write	Input format of the certificate and the private-key files. The three formats supported by the appliance are: PEM - Privacy Enhanced Mail DER - Distinguished Encoding Rule PFX - Personal Information Exchange. Default value: PEM Possible values = DER, PEM, PFX
passplain	<String>	Read-write	Pass phrase used to encrypt the private-key. Required when adding an encrypted private-key in PEM format. Minimum length = 1
expirymonitor	<String>	Read-write	Issue an alert when the certificate is about to expire.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ENABLED, DISABLED
notificationperiod	<Integer>	Read-write	Time, in number of days, before certificate expiration, at which to generate an alert that the certificate is about to expire. Minimum value = 10 Maximum value = 100
bundle	<String>	Read-write	Parse the certificate chain as a single file after linking the server certificate to its issuer's certificate within the file. Default value: NO Possible values = YES, NO
deletecertkeyfilesonremoval	<String>	Read-write	This option is used to automatically delete certificate/key files from physical device when the added certkey is removed. When deleteCertKeyFilesOnRemoval option is used at rm certkey command, it overwrites the deleteCertKeyFilesOnRemoval setting

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			used at add/set certkey command. Default value: CERTKEYFILE_DELETE_NO Possible values = NO, ALWAYS, IF_EXPIRED
deletefromdevice	<Boolean>	Read-write	Delete cert/key file from file system.
linkcertkeyname	<String>	Read-write	Name of the Certificate Authority certificate-key pair to which to link a certificate-key pair. Minimum length = 1
nodomaincheck	<Boolean>	Read-write	Override the check for matching domain names during a certificate update operation.
ocspstaplingcache	<Boolean>	Read-write	Clear cached ocspStapling response in certkey.
signaturealg	<String>	Read-only	Signature algorithm.
certificatetype	<String[]>	Read-only	Specifies whether the certificate is of type root-CA, intermediate-CA, server, client, or client and server. Possible values = ROOT_CERT, INTM_CERT,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			CLNT_CERT, SRVR_CERT, UNKNOWN_CERT
serial	<String>	Read-only	Serial number.
issuer	<String>	Read-only	Issuer name.
clientcertnotbefore	<String>	Read-only	Not-Before date.
clientcertnotafter	<String>	Read-only	Not-After date.
daystoexpiration	<Integer>	Read-only	Days remaining for the certificate to expire.
subject	<String>	Read-only	Subject name.
publickey	<String>	Read-only	Public key algorithm.
publickeysize	<Integer>	Read-only	Size of the public key.
version	<Integer>	Read-only	Version.
priority	<Integer>	Read-only	ocsp priority.
status	<String>	Read-only	Status of the certificate. Possible values = Valid, Not yet valid, Expired
passcrypt	<String>	Read-only	Passcrypt. Minimum length = 1
data	<Integer>	Read-only	Vserver Id.
servicename	<String>	Read-only	Service name to which the certificate key pair is bound.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sandns	<String>	Read-only	Subject Alternative Name (SAN) is an extension to X.509 that allows various values to be associated with a security certificate using a subjectAltName field. These values are called "Subject Alternative Names" (SAN). This field is for DNS names.
sanipadd	<String>	Read-only	Subject Alternative Name (SAN) is an extension to X.509 that allows various values to be associated with a security certificate using a subjectAltName field. These values are called "Subject Alternative Names" (SAN). This field is for IP address.
ocspresponsestatus	<String>	Read-only	Ocsp response status of the certificate. Possible values = NONE, EXPIRED, VALID

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
builtin	<String[]>	Read-only	Flag to determine if Cert key is built-in or not. Possible values = MODIFIABLE, DELETABLE, IMMUTABLE, PARTITION_ALL
feature	<String>	Read-only	The feature to be checked while applying this config.
certkeydigest	<String>	Read-only	Stores the added md5sum of certificate and key files.
certificatesource	<String>	Read-only	Location of the certificate. Default value: LOCAL Possible values = LOCAL, REMOTE
certkeystatus	<String>	Read-only	Status of the certkey in PE. Possible values = ACTIVE, INACTIVE(Default state), INACTIVE(No Private Key), INACTIVE(Duplicate SAN-Multiple clashing certs), INACTIVE(Duplicat

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			e SAN-All SAN entires not covered), INACTIVE(Duplicate SAN-Earlier expiry), INACTIVE(Crossed MAX SAN limit), INACTIVE(No common name), INACTIVE(Common name/SAN too long), INACTIVE(No memory), INACTIVE(MAX cert req len reached), INACTIVE(X509 Name failure)
_nextgenapiresource	<String>	Read-only	.
__count	<Double>	Read-only	count parameter

Use this query-parameter to get the summary output of sslcertkey resources configured on NetScaler.

Note: By default, the retrieved results are displayed in detail view (?view=detail).

HTTP Method: GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{  "sslcertkey": [ {

"certkey":<String_value>,

"cert":<String_value>,

"key":<String_value>,

"inform":<String_value>,

"signaturealg":<String_value>,

"certificatetype":<String[]_value>,

"serial":<String_value>,

"issuer":<String_value>,

"clientcertnotbefore":<String_value>,
```

```
"clientcertnotafter":<String_value>,

"daystoexpiration":<Integer_value>,

"subject":<String_value>,

"publickey":<String_value>,

"publickeysize":<Integer_value>,

"version":<Integer_value>,

"priority":<Integer_value>,

"status":<String_value>,

"fipskey":<String_value>,

"hsmkey":<String_value>,

"passcrypt":<String_value>,

"passplain":<String_value>,

"data":<Integer_value>,

"servicename":<String_value>,

"expirymonitor":<String_value>,

"linkcertkeyname":<String_value>,

"sandns":<String_value>,

"sanipadd":<String_value>,

"ocspresponsestatus":<String_value>,

"builtin":<String[]_value>,

"feature":<String_value>,
```

```
"certkeydigest":<String_value>,

"certificatesource":<String_value>,

"certkeystatus":<String_value>,

"deletecertkeyfilesonremoval":<String_value>,

"_nextgenapiresource":<String_value>

}]}
```

count

URL: http:// <netscaler-ip-address> /nitro/v1/config/sslcertkey? **count=yes HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "sslcertkey": [ { "__count": "#no"} ] }
```

sslvserver_binding

Binding object which returns the resources bound to sslvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
vservername	<String>	Read-write	Name of the SSL virtual server for which to show detailed information. Minimum length = 1
sslvserver_sslcacertbundle_binding	<sslvserver_sslcacertbundle_binding[]>	Read-only	sslcacertbundle that can be bound to sslvserver.
sslvserver_sslpolicy_binding	<sslvserver_sslpolicy_binding[]>	Read-only	sslpolicy that can be bound to sslvserver.
sslvserver_sslciphersuite_binding	<sslvserver_sslciphersuite_binding[]>	Read-only	sslciphersuite that can be bound to sslvserver.
sslvserver_sslcertkey_binding	<sslvserver_sslcertkey_binding[]>	Read-only	sslcertkey that can be bound to sslvserver.
sslvserver_sslcertkeybundle_binding	<sslvserver_sslcertkeybundle_binding[]>	Read-only	sslcertkeybundle that can be bound to sslvserver.
sslvserver_ecccurve_binding	<sslvserver_ecccurve_binding[]>	Read-only	ecccurve that can be bound to sslvserver.
sslvserver_hashicorp_binding	<sslvserver_hashicorp_binding[]>	Read-only	hashicorp that can be bound to sslvserver.
sslvserver_sslcipher_binding	<sslvserver_sslcipher_binding[]>	Read-only	sslcipher that can be bound to sslvserver.

Operations

(click to see Properties)

- GET
- GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:** NITRO allows you to get warnings in an operation by specifying the 'warning' query parameter as 'yes'. For example, to get warnings while connecting to the NetScaler appliance, the URL is as follows:

  http:// <netscaler-ip-address> /nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code '209 X-NITRO-WARNING'.

- **Authenticated access for individual NITRO operations:** NITRO allows you to logon to the NetScaler appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER: <username>

  X-NITRO-PASS: <password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

`*Note: *` Mandatory parameters are marked in red and placeholder content is marked in green

get

URL: http:// <netscaler-ip-address> /nitro/v1/config/sslvserver_binding/ vservername_value<String> **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "sslvserver_binding": [ {

"vservername":<String_value>,

"sslvserver_sslciphersuite_binding":<sslvserver_sslciphersuite_binding[]_value>,

"sslvserver_sslpolicy_binding":<sslvserver_sslpolicy_binding[]_value>,

"sslvserver_ecccurve_binding":<sslvserver_ecccurve_binding[]_value>,

"sslvserver_hashicorp_binding":<sslvserver_hashicorp_binding[]_value>,

"sslvserver_sslcertkey_binding":<sslvserver_sslcertkey_binding[]_value>,

"sslvserver_sslcacertbundle_binding":<sslvserver_sslcacertbundle_binding[]_value>,

"sslvserver_sslcertkeybundle_binding":<sslvserver_sslcertkeybundle_binding[]_value>,

"sslvserver_sslcipher_binding":<sslvserver_sslcipher_binding[]_value>

}]}
```

get (all)

URL: http:// <netscaler-ip-address> /nitro/v1/config/sslvserver_binding **HTTP Method:** GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN= <tokenvalue>

Accept:application/json

Query-parameters: bulkbindings http:// <netscaler-ip-address> /nitro/v1/config/ sslvserver_binding? **bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

Note: get (all) method can be used only in conjuction with bulkbindings query parameter.

Response: HTTP Status Code on Success: 200 OK

HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for NetScaler-specific errors). The response payload provides details of the error

Response Header:

Content-Type:application/json

Response Payload:

```
{ "sslvserver_binding": [ {

"vservername":<String_value>,

"sslvserver_sslciphersuite_binding":<sslvserver_sslciphersuite_binding[]_value>,

"sslvserver_sslpolicy_binding":<sslvserver_sslpolicy_binding[]_value>,

"sslvserver_ecccurve_binding":<sslvserver_ecccurve_binding[]_value>,

"sslvserver_hashicorp_binding":<sslvserver_hashicorp_binding[]_value>,

"sslvserver_sslcertkey_binding":<sslvserver_sslcertkey_binding[]_value>,

"sslvserver_sslcacertbundle_binding":<sslvserver_sslcacertbundle_binding[]_value>,

"sslvserver_sslcertkeybundle_binding":<sslvserver_sslcertkeybundle_binding[]_value>,

"sslvserver_sslcipher_binding":<sslvserver_sslcipher_binding[]_value>

}]}
```
