Operations

(click to see Properties)

GET| GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get

vpnvserver_cachepolicy_binding

Binding object showing the cachepolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
gotopriorityexpression	<String>	Read-write	Next priority expression.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			authentication has succeeded.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on whether the policy

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

```

vpnvserver_feopolicy_binding

Binding object showing the feopolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
gotopriorityexpression	<String>	Read-write	Next priority expression.
policy	<String>	Read-write	Name of a policy to bind to the virtual server (for example, the name of an authentication, session, or endpoint analysis policy). Minimum length = 1
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
bindpoint	<String>	Read-write	Bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/vpnvserver_feopolicy_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{

"vpnvserver_feopolicy_binding":{

<b>"name":<String_value>,

</b>"policy":<String_value>,

"priority":<Double_value>,

"secondary":<Boolean_value>,

"groupextraction":<Boolean_value>,

"gotopriorityexpression":<String_value>,

"bindpoint":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_feopolicy_binding/name_value<String>

Query-parameters:

bulkbindings

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_intranetip_binding?**bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "vpnvserver_intranetip_binding": [ {

"name":<String_value>,

"intranetip":<String_value>,

"netmask":<String_value>,

"map":<String_value>,

"acttype":<Double_value>

}]}
```

count

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_intranetip_binding/name_value<String>?**count=yes**

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{"vpnvserver_intranetip_binding": [ { "__count": "#no"} ] }
```

vpnvserver_responderpolicy_binding

Binding object showing the responderpolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
gotopriorityexpression	<String>	Read-write	Next priority expression.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			and this will only be called if primary and/or secondary authentication has succeeded.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			RES_DEFAULT, depending on whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST
__count	<Double>	Read-write	count parameter

Operations

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/vpnvserver_responderpolicy_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{
"vpnvserver_responderpolicy_binding":{
<b>"name":<String_value>,
</b>"policy":<String_value>,
"priority":<Double_value>,
"secondary":<Boolean_value>,
"groupextraction":<Boolean_value>,
"gotopriorityexpression":<String_value>,
"bindpoint":<String_value>
}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_responderpolicy_binding/name_value<String>

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_responderpolicy_binding/name_value<String>?**args=policy:<String_value>,secondary:<Boolean_value>,groupextraction:<Boolean_value>,bindpoint:<**

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_responderpolicy_binding/name_value<String>

Query-parameters:

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{"vpnvserver_staserver_binding": [ { "__count": "#no"} ] }
```

vpnvserver_vpnclientlessaccesspolicy_binding

Binding object showing the vpnclientlessaccesspolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
gotopriorityexpression	<String>	Read-write	Next priority expression.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/or secondary authentication has succeeded.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
bindpoint	<String>	Read-write	Bindpoint to which the policy is bound. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST
acttype	<Double>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/vpnvserver_vpnclientlessaccesspolicy_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{

"vpnvserver_vpnclientlessaccesspolicy_binding":{

<b>"name":<String_value>,

</b>"policy":<String_value>,

"priority":<Double_value>,

"secondary":<Boolean_value>,

"groupextraction":<Boolean_value>,

"gotopriorityexpression":<String_value>,

"bindpoint":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_vpnclientlessaccesspolicy_binding/name_value<String>

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_vpnclientlessaccesspolicy_binding/name_value<String>?**args=policy:<String_value>,secondary:<Boolean_value>,groupextraction:<Boolean_value>,bindpoint:<**

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_vpnclientlessaccesspolicy_binding/name_value<String>

vpnvserver_vpnportaltheme_binding

Binding object showing the vpnportaltheme that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
portaltheme	<String>	Read-write	Name of the portal theme bound to VPN vserver.
acttype	<Double>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/vpnvserver_vpnportaltheme_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{

"vpnvserver_vpnportaltheme_binding":{

<b>"name":<String_value>,

</b>"portaltheme":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_vpnportaltheme_binding/name_value<String>

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_vpnportaltheme_binding/name_value<String>?**args=portaltheme:<String_value>**

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_vpnportaltheme_binding/name_value<String>

Query-parameters:

```

vpnvserver_vpnsessionpolicy_binding

Binding object showing the vpnsessionpolicy that can be bound to vpnvserver.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	Integer specifying the policy's priority. The lower the number, the higher the priority. Policies are evaluated in the order of their priority numbers. Maximum value for default syntax policies is 2147483647 and for classic policies is 64000. Minimum value = 0 Maximum value = 2147483647
gotopriorityexpression	<String>	Read-write	Applicable only to advance vpn session policy. Expression or other value specifying the next policy to evaluate if the current policy evaluates to TRUE. Specify one of the following values: *

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a number that is larger than the largest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
policy	<String>	Read-write	The name of the policy, if any, bound to the VPN virtual server.
groupextraction	<Boolean>	Read-write	Binds the authentication policy to a tertiary chain which will be used only for group extraction. The user will not authenticate against this server, and this will only be called if primary and/

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			or secondary authentication has succeeded.
name	<String>	Read-write	Name of the virtual server. Minimum length = 1
secondary	<Boolean>	Read-write	Binds the authentication policy as the secondary policy to use in a two-factor configuration. A user must then authenticate not only via a primary authentication method but also via a secondary authentication method. User groups are aggregated across both. The user name must be exactly the same for both authentication methods, but they can require different passwords.
bindpoint	<String>	Read-write	Bind point to which to bind the policy. Applies only to rewrite and cache policies. If you do not set this parameter, the policy is bound to REQ_DEFAULT or RES_DEFAULT, depending on

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			whether the policy rule is a response-time or a request-time expression. Possible values = REQUEST, RESPONSE, ICA_REQUEST, OTHERTCP_REQUEST
acttype	<Double>	Read-only	.
__count	<Double>	Read-only	count parameter

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/vpnvserver_vpnurl_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{

"vpnvserver_vpnurl_binding":{

<b>"name":<String_value>,

</b>"urlname":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/vpnvserver_vpnurl_binding/name_value<String>

Query-parameters:

{"vpnvserver_vpnurl_binding": [ { "__count": "#no"} ] }
```

Stream

Stream

Stream configuration.

NAME	DESCRIPTION
streamidentifier	Configuration for identifier
streamidentifier_binding	Binding object showing the resources that can be bound to streamidentifier

NAME	DESCRIPTION
streamidentifier_streamsession_binding	Binding object showing the streamsession that can be bound to streamidentifier
streamselector	Configuration for selector
streamsession	Configuration for active connection

streamidentifier

Configuration for identifier resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	The name of stream identifier.
selectorname	<String>	Read-write	Name of the selector to use with the stream identifier. Minimum length = 1
interval	<Double>	Read-write	Number of minutes of data to use when calculating session statistics (number of requests, bandwidth, and response times). The interval is a moving window that keeps the most recently collected data. Older data is discarded at regular intervals. Default value: 1 Minimum value = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
samplecount	<Double>	Read-write	Size of the sample from which to select a request for evaluation. The smaller the sample count, the more accurate is the statistical data. To evaluate all requests, set the sample count to 1. However, such a low setting can result in excessive consumption of memory and processing resources. Default value: 1 Minimum value = 1 Maximum value = 65535
sort	<String>	Read-write	Sort stored records by the specified statistics column, in descending order. Performed during data collection, the sorting enables real-time data evaluation through Citrix ADC policies (for example, compression and caching policies) that use functions such as IS_TOP(n).

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: REQUESTS Possible values = REQUESTS, CONNECTIONS, RESPTIME, BANDWIDTH, RESPTIME_BREACHES, NONE
snmptrap	<String>	Read-write	Enable/disable SNMP trap for stream identifier. Default value: DISABLED Possible values = ENABLED, DISABLED
appflowlog	<String>	Read-write	Enable/disable Appflow logging for stream identifier. Default value: DISABLED Possible values = ENABLED, DISABLED
trackackonlypackets	<String>	Read-write	Track ack only packets as well. This setting is applicable only when packet rate limiting is being used.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: DISABLED Possible values = ENABLED, DISABLED
tracktransactions	<String>	Read-write	Track transactions exceeding configured threshold. Transaction tracking can be enabled for following metric: ResponseTime. By default transaction tracking is disabled. Default value: NONE Possible values = RESPTIME, NONE
maxtransactionthreshold	<Double>	Read-write	Maximum per transcation value of metric. Metric to be tracked is specified by tracktransactions attribute. Default value: 0
mintransactionthreshold	<Double>	Read-write	Minimum per transcation value of metric. Metric to be tracked is specified by tracktransactions attribute. Default value: 0

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
acceptancethreshold	<String>	Read-write	Non-Breaching transactions to Total transactions threshold expressed in percent. Maximum of 6 decimal places is supported. Default value: 0.000000 Maximum length = 10
breachthreshold	<Double>	Read-write	Breaching transactions threshold calculated over interval. Default value: 0
rule	<String[]>	Read-only	Rule.
__count	<Double>	Read-only	count parameter

Operations

```

streamselector

Configuration for selector resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the selector. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. If the name includes one or more spaces, and you are using the Citrix ADC CLI, enclose the name in double or single quotation marks (for example, "my selector" or 'my selector').
rule	<String[]>	Read-write	Set of up to five expressions. Maximum length: 7499 characters. Each expression must identify a specific request characteristic, such as the client's IP address (with CLIENT.IP.SRC) or requested server resource (with HTTP.REQ.URL).

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Note: If two or more selectors contain the same expressions in different order, a separate set of records is created for each selector. Minimum length = 1
__count	<Double>	Read-only	count parameter

CLEAR

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

clear

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/streamsession?**action=clear**

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"streamsession":{

<b>"name":<String_value>

</b>}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

Subscriber

Subscriber

Subscriber configuration

NAME	DESCRIPTION
subscribergxinterface	Configuration for Gx interface Parameters
subscriberparam	Configuration for Subscriber Params
subscriberprofile	Configuration for Subscriber Profile
subscriberradiusinterface	Configuration for RADIUS interface Parameters
subscribersessions	Configuration for subscriber sesions

subscribergxinterface

Configuration for Gx interface Parameters resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
vserver	<String>	Read-write	Name of the load balancing, or content switching vserver to which the Gx connections are established. The service type of the virtual server must be DIAMETER/ SSL_DIAMETER. Mutually exclusive with the service parameter. Therefore, you cannot set both service and the Virtual Server in the Gx Interface. Minimum length = 1
service	<String>	Read-write	Name of DIAMETER/ SSL_DIAMETER service corresponding to PCRF to which the Gx connection is established. The service type of the service must be DIAMETER/ SSL_DIAMETER. Mutually exclusive with vserver parameter. Therefore, you cannot set both Service and the Virtual Server in the Gx Interface.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1
pcrfrealm	<String>	Read-write	PCRF realm is of type DiameterIdentity and contains the realm of PCRF to which the message is to be routed. This is the realm used in Destination-Realm AVP by Citrix ADC Gx client (as a Diameter node). Minimum length = 1
holdonsubscriberabsence	<String>	Read-write	Set this setting to yes if Citrix ADC needs to Hold pakcets till subscriber session is fetched from PCRF. Else set to NO. By default set to yes. If this setting is set to NO, then till Citrix ADC fetches subscriber from PCRF, default subscriber profile will be applied to this subscriber if configured. If default subscriber profile is also not configured an undef would be raised to expressions which use Subscriber attributes. . Default value: YES

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
requesttimeout	<Double>	Read-write	q!Time, in seconds, within which the Gx CCR request must complete. If the request does not complete within this time, the request is retransmitted for requestRetryAttempts time. If still reuqest is not complete then default subscriber profile will be applied to this subscriber if configured. If default subscriber profile is also not configured an undef would be raised to expressions which use Subscriber attributes. Zero disables the timeout. !. Default value: 10 Minimum value = 0 Maximum value = 86400
requestretryattempts	<Double>	Read-write	If the request does not complete within requestTimeout time, the request is retransmitted for requestRetryAttempts time.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: 3
idlettl	<Double>	Read-write	q!Idle Time, in seconds, after which the Gx CCR-U request will be sent after any PCRF activity on a session. Any RAR or CCA message resets the timer. Zero value disables the idle timeout. !. Default value: 900 Minimum value = 0 Maximum value = 86400
revalidationtimeout	<Double>	Read-write	q!Revalidation Timeout, in seconds, after which the Gx CCR-U request will be sent after any PCRF activity on a session. Any RAR or CCA message resets the timer. Zero value disables the idle timeout. !. Default value: 0 Minimum value = 0 Maximum value = 86400

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
healthcheck	<String>	Read-write	q!Set this setting to yes if Citrix ADC should send DWR packets to PCRF server. When the session is idle, healthcheck timer expires and DWR packets are initiated in order to check that PCRF server is active. By default set to No. !. Default value: NO Possible values = YES, NO
healthcheckttl	<Double>	Read-write	q!Healthcheck timeout, in seconds, after which the DWR will be sent in order to ensure the state of the PCRF server. Any CCR, CCA, RAR or RRA message resets the timer. !. Default value: 30 Minimum value = 6 Maximum value = 86400
cerrequesttimeout	<Double>	Read-write	q!Healthcheck request timeout, in seconds, after which the Citrix ADC considers that no CCA packet received

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			to the initiated CCR. After this time Citrix ADC should send again CCR to PCRF server. !. Default value: 0 Minimum value = 0 Maximum value = 86400
negativettl	<Double>	Read-write	q!Negative TTL, in seconds, after which the Gx CCR-I request will be resent for sessions that have not been resolved by PCRF due to server being down or no response or failed response. Instead of polling the PCRF server constantly, negative-TTL makes Citrix ADC stick to un-resolved session. Meanwhile Citrix ADC installs a negative session to avoid going to PCRF. For Negative Sessions, Netcaler inherits the attributes from default subscriber profile if default subscriber is configured. A

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			default subscriber could be configured as 'add subscriber profile *'. Or these attributes can be inherited from Radius as well if Radius is configued. Zero value disables the Negative Sessions. And Citrix ADC does not install Negative sessions even if subscriber session could not be fetched. !. Default value: 600 Minimum value = 0 Maximum value = 86400
negativettllimitedsuccess	<String>	Read-write	Set this to YES if Citrix ADC should create negative session for Result-Code DIAMETER_LIMITED_SUCCESS (2002) received in CCA-I. If set to NO, regular session is created. Default value: NO

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = YES, NO
purgesdbongxfailure	<String>	Read-write	Set this setting to YES if needed to purge Subscriber Database in case of Gx failure. By default set to NO. . Default value: NO Possible values = YES, NO
servicepathavp	<Double[]>	Read-write	The AVP code in which PCRF sends service path applicable for subscriber. Minimum value = 1
servicepathvendorid	<Double>	Read-write	The vendorid of the AVP in which PCRF sends service path for subscriber.
nodeid	<Double>	Read-write	Unique number that identifies the cluster node. Minimum value = 0 Maximum value = 31
svrstate	<String>	Read-only	The state of the gx service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
identity	<String>	Read-only	DiameterIdentity to be used by NS. DiameterIdentity is used to identify a Diameter node uniquely. Before setting up diameter configuration, Citrix ADC (as a Diameter node) MUST be assigned a unique DiameterIdentity. example => set ns diameter -identity Citrix ADC.com Now whenever Citrix ADC system needs to use identity in diameter messages. It will use 'netscaler.com' as Origin-Host AVP as defined in RFC3588 . Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
realm	<String>	Read-only	Diameter Realm to be used by NS. example => set ns diameter -realm com Now whenever Citrix ADC system needs to use realm in diameter messages. It will use 'com' as Origin-Realm AVP as defined in RFC3588 . Minimum length = 1
status	<String>	Read-only	Citrix ADC PCRF connection Status. (Gx Protocol State).
servicepathinfomode	<String>	Read-only	The type of info in which service path is passed from PCRF, SERVICE_FUNCTION: Denotes the service chain is passed as servicefunction names in-order in AVPS with code servicepathAVP SERVICE_PATH: Denotes the service path name is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			passed in AVPS with code servicepathAVP.q. Default value: SERVICEPATH Possible values = SERVICEFUNCTIONS, SERVICEPATH
gxreportingavp1	<Double[]>	Read-only	The AVP code to report as 1st custom AVP. Minimum value = 1
gxreportingavp1vendorid	<Double>	Read-only	The vendorid of the AVP which will be reported as 1st custom AVP.
gxreportingavp1type	<String>	Read-only	The type of the AVP which will be reported as 1st custom AVP. Default value: OctetString Possible values = OctetString, Integer32, Integer64, Unsigned32, Unsigned64, Float32, Float64
gxreportingavp2	<Double[]>	Read-only	The AVP code to report as 2nd custom AVP.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 1
gxreportingavp2vendorid	<Double>	Read-only	The vendorid of the AVP which will be reported as 2nd custom AVP.
gxreportingavp2type	<String>	Read-only	The type of the AVP which will be reported as 2nd custom AVP. Default value: OctetString Possible values = OctetString, Integer32, Integer64, Unsigned32, Unsigned64, Float32, Float64
gxreportingavp3	<Double[]>	Read-only	The AVP code to report as 3rd custom AVP. Minimum value = 1
gxreportingavp3vendorid	<Double>	Read-only	The vendorid of the AVP which will be reported as 3rd custom AVP.
gxreportingavp3type	<String>	Read-only	The type of the AVP which will be reported as 3rd custom AVP. Default value: OctetString

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = OctetString, Integer32, Integer64, Unsigned32, Unsigned64, Float32, Float64
gxreportingavp4	<Double[]>	Read-only	The AVP code to report as 4th custom AVP. Minimum value = 1
gxreportingavp4vendorid	<Double>	Read-only	The vendorid of the AVP which will be reported as 4th custom AVP.
gxreportingavp4type	<String>	Read-only	The type of the AVP which will be reported as 4th custom AVP. Default value: OctetString Possible values = OctetString, Integer32, Integer64, Unsigned32, Unsigned64, Float32, Float64
gxreportingavp5	<Double[]>	Read-only	The AVP code to report as 5th custom AVP. Minimum value = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gxreportingavp5vendorid	<Double>	Read-only	The vendorid of the AVP which will be reported as 5th custom AVP.
gxreportingavp5type	<String>	Read-only	The type of the AVP which will be reported as 5th custom AVP. Default value: OctetString Possible values = OctetString, Integer32, Integer64, Unsigned32, Unsigned64, Float32, Float64

subscriberparam

Configuration for Subscriber Params resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
keytype	<String>	Read-write	Type of subscriber key type IP or IPANDVLAN. IPANDVLAN option can be used only when the interfaceType is set to gxOnly. Changing the lookup method should result to the subscriber session

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			database being flushed. Default value: IP Possible values = IP, IPANDVLAN
interfacetype	<String>	Read-write	Subscriber Interface refers to Citrix ADC interaction with control plane protocols, RADIUS and GX. Types of subscriber interface: NONE, RadiusOnly, RadiusAndGx, GxOnly. NONE: Only static subscribers can be configured. RadiusOnly: GX interface is absent. Subscriber information is obtained through RADIUS Accounting messages. RadiusAndGx: Subscriber ID obtained through RADIUS Accounting is used to query PCRF. Subscriber information is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			obtained from both RADIUS and PCRF. GxOnly: RADIUS interface is absent. Subscriber information is queried using Subscriber IP or IP+VLAN. Default value: None Possible values = None, RadiusOnly, RadiusAndGx, GxOnly
idlettl	<Double>	Read-write	q!Idle Timeout, in seconds, after which Citrix ADC will take an idleAction on a subscriber session (refer to 'idleAction' arguement in 'set subscriber param' for more details on idleAction). Any data-plane or control plane activity updates the idleTimeout on subscriber session. idleAction could be to 'just delete the session' or 'delete and CCR-T' (if PCRF is configured) or 'do not delete but send a CCR-U'.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Zero value disables the idle timeout. !. Default value: 0 Minimum value = 0 Maximum value = 172800
idleaction	<String>	Read-write	q!Once idleTTL exprires on a subscriber session, Citrix ADC will take an idle action on that session. idleAction could be chosen from one of these ==> 1. ccrTerminate: (default) send CCR-T to inform PCRF about session termination and delete the session. 2. delete: Just delete the subscriber session without informing PCRF. 3. ccrUpdate: Do not delete the session and instead send a CCR-U to PCRF requesting

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			for an updated session. !. Default value: ccrTerminate Possible values = ccrTerminate, delete, ccrUpdate
ipv6prefixlookuplist	<Double[]>	Read-write	The ipv6PrefixLookupList should consist of all the ipv6 prefix lengths assigned to the UE's'. Minimum value = 1 Maximum value = 128

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "subscriberprofile": [ { "__count": "#no"} ] }
```

subscriberradiusinterface

Configuration for RADIUS interface Parameters resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
listeningservice	<String>	Read-write	Name of RADIUS LISTENING service that will process RADIUS accounting requests. Minimum length = 1
radiusinterimasstart	<String>	Read-write	Treat radius interim message as start radius messages. Default value: DISABLED Possible values = ENABLED, DISABLED
svrstate	<String>	Read-only	The state of the radius service. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED

Operations

(click to see Properties)

UPDATE| UNSET| GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

update

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/subscriberradiusinterface

HTTP Method:PUT

Request Headers:

```

subscribersessions

Configuration for subscriber sesions resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ip	<String>	Read-write	Subscriber IP Address. Default value: 0
vlan	<Double>	Read-write	The vlan number on which the subscriber is located. Default value: 0 Minimum value = 0 Maximum value = 4096
nodeid	<Double>	Read-write	Unique number that identifies the cluster node. Minimum value = 0 Maximum value = 31
subscriptionidtype	<String>	Read-only	Subscription-Id type. Possible values = E164, IMSI, SIP_URI, NAI, PRIVATE
subscriptionidvalue	<String>	Read-only	Subscription-Id value.
subscriberrules	<String[]>	Read-only	Rules stored in this session for this subscriber. When PCRF sends Charging-Rule-Name or Charging-Rule-Base-Name AVP for a subscriber, Citrix ADC stores these

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			AVPs in the subscriber session. These Rules can be retreived using 'Subscriber.Rule_Active(<rule name>)' expression. For static subscriber profiles, these rules are configured using '-subscriberRules <list of rules>'.
flags	<Double>	Read-only	Subscriber Session flags.
ttl	<Double>	Read-only	Subscriber Session revalidation Timeout remaining. This TTL gets refreshed when a radius or CCA or RAR message is received for this subscriber session. Citrix ADC will send a CCR-U after revalidation timer expires. If subscriber sessions is a negative session, then Citrix ADC will send a CCR-I after TTL expires. Negative Sessions are sessions which have not been resolved by PCRF

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			and instead of polling PCRF continously, Citrix ADC has installed a negative session. If default subscriber is configued, then Negative Sessions inherits default subscriber profile. .
idlettl	<Double>	Read-only	Subscriber Session Activity Timeout remaining. Citrix ADC will take an idleAction after ttl expires. idleaction could be --> 1. ccrTerminate: (default) send CCR-T to inform PCRF about session termination and delete the session. 2. delete: Just delete the subscriber session without informing PCRF. 3. ccrUpdate: Do not delete the session and instead send a CCR-U to PCRF requesting

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			for an updated session. But if this is a negative session and idleaction is ccrUpdate then Citrix ADC won't take any action. Also on negative sessions ccrTerminate translates to delete.
avpdisplaybuffer	<String>	Read-only	Subscriber Attributes Display.
servicepath	<String>	Read-only	Name of the servicepath to be taken for this subscriber.
__count	<Double>	Read-only	count parameter

```

SureConnect

Sure Connect

SureConnect configuration. SureConnect allows the system to deliver alternate content to clients when the system is under heavy load for the original URL. The original content will be served to the client, automatically, after an estimated delay period.

NAME	DESCRIPTION
scparameter	Configuration for SC parameter
scpolicy	Configuration for SureConnect policy

scparameter

Configuration for SC parameter resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sessionlife	<Double>	Read-write	Time, in seconds, between the first time and the next time the SureConnect alternative content window is displayed. The alternative content window is displayed only once during a session for the same browser accessing a configured URL, so this parameter determines the length of a session. Default value: 300 Minimum value = 1 Maximum value = 4294967294
vsr	<String>	Read-write	File containing the customized response to be displayed when the ACTION in the SureConnect policy is set to NS. Default value: "DEFAULT" Minimum length = 1

```

scpolicy

Configuration for SureConnect policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the policy. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Minimum length = 1 Maximum length = 31
url	<String>	Read-write	URL against which to match incoming client request. Maximum length = 127
rule	<String>	Read-write	Expression against which the traffic is evaluated. Maximum length of a string literal in the expression is 255 characters. A longer string can be split into smaller strings of up to 255 characters each, and the smaller strings concatenated with the + operator. For

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			example, you can create a 500-character string as follows: "'<string of 255 characters>" + "<string of 245 characters>'" The following requirements apply only to the Citrix ADC CLI: * If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation marks, escape the quotations by using the character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum length = 1499
delay	<Double>	Read-write	Delay threshold, in microseconds, for requests that match the policy's URL or rule. If the delay statistics gathered for the matching request exceed the specified delay, SureConnect is triggered for that request. Minimum value = 1 Maximum value = 599999999
maxconn	<Double>	Read-write	Maximum number of concurrent connections that can be open for requests that match the policy's URL or rule. Minimum value = 1 Maximum value = 4294967294
action	<String>	Read-write	Action to be taken when the delay or maximum-connections threshold is reached. Available settings function as follows:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ACS - Serve content from an alternative content service. NS - Serve alternative content from the Citrix ADC. NO ACTION - Serve no alternative content. However, delay statistics are still collected for the configured URLs, and, if the Maximum Client Connections parameter is set, the number of connections is limited to the value specified by that parameter. (However, alternative content is not served even if the maxConn threshold is met). Possible values = ACS, NS, NOACTION
altcontentsvcname	<String>	Read-write	Name of the alternative content service to be used in the ACS action.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1 Maximum length = 127
altcontentpath	<String>	Read-write	Path to the alternative content service to be used in the ACS action. Minimum length = 1 Maximum length = 127
__count	<Double>	Read-only	count parameter

systemglobal_authenticationlocalpolicy_binding	Binding object showing the authenticationlocalpolicy that can be bound to systemglobal
systemglobal_authenticationpolicy_binding	Binding object showing the authenticationpolicy that can be bound to systemglobal

NAME	DESCRIPTION
systemglobal_authenticationradiuspolicy_binding	Binding object showing the authenticationradiuspolicy that can be bound to systemglobal
systemglobal_authenticationtacacspolicy_binding	Binding object showing the authenticationtacacspolicy that can be bound to systemglobal
systemglobal_binding	Binding object showing the resources that can be bound to systemglobal
systemglobaldata	Configuration for global counter data
systemgroup	Configuration for system group
systemgroup_binding	Binding object showing the resources that can be bound to systemgroup
systemgroup_nspartition_binding	Binding object showing the nspartition that can be bound to systemgroup
systemgroup_systemcmdpolicy_binding	Binding object showing the systemcmdpolicy that can be bound to systemgroup
systemgroup_systemuser_binding	Binding object showing the systemuser that can be bound to systemgroup
systemhwerror	Configuration for Hardware errors
systemkek	
systemparameter	Configuration for system parameter
systemrestorepoint	Configuration for Setting restorepoints for auto restore
systemsession	Configuration for system session
systemsshkey	
systemuser	Configuration for system user

NAME	DESCRIPTION
systemuser_binding	Binding object showing the resources that can be bound to systemuser
systemuser_nspartition_binding	Binding object showing the nspartition that can be bound to systemuser
systemuser_systemcmdpolicy_binding	Binding object showing the systemcmdpolicy that can be bound to systemuser
systemuser_systemgroup_binding	Binding object showing the systemgroup that can be bound to systemuser

systembackup

Configuration for Backup Data for ns backup and restore resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
filename	<String>	Read-write	Name of the backup file(*.tgz) to be restored.
uselocaltimezone	<Boolean>	Read-write	This option will create backup file with local timezone timestamp.
level	<String>	Read-write	Level of data to be backed up. Default value: basic Possible values = basic, full
includekernel	<String>	Read-write	Use this option to add kernel in the backup file.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: NO Possible values = NO, YES
comment	<String>	Read-write	Comment specified at the time of creation of the backup file(*.tgz).
skipbackup	<Boolean>	Read-write	Use this option to skip taking backup during restore operation.
size	<Double>	Read-only	Size of the backup file(*.tgz) in KB.
creationtime	<String>	Read-only	Creation time of the backup file(*.tgz).
version	<String>	Read-only	Build version of the backup file(*.tgz).
createdby	<String>	Read-only	Name of user who created the backup file(*.tgz).
ipaddress	<String>	Read-only	Ip of Citrix ADC box where the backup file(*.tgz) was created.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

CREATE| RESTORE| ADD| DELETE| GET (ALL)| GET| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

create

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup?**action=create**

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"systembackup":{
```

```
"filename":<String_value>,

"uselocaltimezone":<Boolean_value>,

"level":<String_value>,

"includekernel":<String_value>,

"comment":<String_value>

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

restore

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup?**action=restore**

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"systembackup":{

<b>"filename":<String_value>,

</b>"skipbackup":<Boolean_value>

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

add

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"systembackup":{

<b>"filename":<String_value>

</b>}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup/filename_value<String>

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup

Query-parameters:

attrs

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup?**attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup?**filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of systembackup resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

view

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup?**view=summary**

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup?**pagesize=#no;pageno=#no**

Use this query-parameter to get the systembackup resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systembackup": [ {

"filename":<String_value>,

"level":<String_value>,

"includekernel":<String_value>,

"comment":<String_value>,

"size":<Double_value>,

"uselocaltimezone":<Boolean_value>,

"creationtime":<String_value>,

"version":<String_value>,

"createdby":<String_value>,

"ipaddress":<String_value>

}]}
```

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup/filename_value<String>

Query-parameters:

attrs

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup/filename_value<String>?**attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

view

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup/filename_value<String>?**view=summary**

Note: By default, the retrieved results are displayed in detail view (?view=detail).

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systembackup": [ {

"filename":<String_value>,

"level":<String_value>,

"includekernel":<String_value>,

"comment":<String_value>,

"size":<Double_value>,

"uselocaltimezone":<Boolean_value>,
```

```
"creationtime":<String_value>,

"version":<String_value>,

"createdby":<String_value>,

"ipaddress":<String_value>

}]}
```

count

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systembackup?**count=yes**

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systembackup": [ { "__count": "#no"} ] }
```

systemcmdpolicy

Configuration for command policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
policyname	<String>	Read-write	Name for a command policy. Must begin with a letter, number, or the underscore (_) character, and must contain only alphanumeric, hyphen (-), period (.), hash (#), space ( ), at (@), equal (=), colon (:), and underscore characters. Cannot be changed after the policy is created. CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my policy" or 'my policy'). Minimum length = 1
action	<String>	Read-write	Action to perform when a request matches the policy. Possible values = ALLOW, DENY
cmdspec	<String>	Read-write	Regular expression specifying the data that matches the policy. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

ADD| DELETE| UPDATE| GET (ALL)| GET| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemcmdpolicy

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"systemcmdpolicy":{

<b>"policyname":<String_value>,

</b><b>"action":<String_value>,

</b><b>"cmdspec":<String_value>

</b>}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemcmdpolicy/policyname_value<String>

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

update

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemcmdpolicy

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"systemcmdpolicy":{

<b>"policyname":<String_value>,

</b><b>"action":<String_value>,

</b><b>"cmdspec":<String_value>

</b>}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemcmdpolicy

Query-parameters:

attrs

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemcmdpolicy?**attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemcmdpolicy?**filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of systemcmdpolicy resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

view

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemcmdpolicy?**view=summary**

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemcmdpolicy?**pagesize=#no;pageno=#no**

Use this query-parameter to get the systemcmdpolicy resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemdatasource?**args=datasource:<String_value>**

Use this query-parameter to get systemdatasource resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systemdatasource": [ {

datasource:<String_value>"response":<String_value>

}]}
```

systementity

Configuration for entity resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
type	<String>	Read-write	Specify the entity type.
datasource	<String>	Read-write	Specifies the source which contains all the stored counter values.
core	<Integer>	Read-write	Specify core ID of the PE in nCore.
response	<String>	Read-only	.

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:` *

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systementity

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systementity?
args=type:<String_value>,datasource:<String_value>,core:<Integer_value>

Use this query-parameter to get systementity resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systementity": [ {

<b>type:<String_value>,</
b>datasource:<String_value>,core:<Integer_value>"response":<String_value>

}]}
```

systemglobal_auditnslogpolicy_binding

Binding object showing the auditnslogpolicy that can be bound to systemglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	The priority of the command policy.
globalbindtype	<String>	Read-write	. Default value: SYSTEM_GLOBAL Possible values = SYSTEM_GLOBAL, VPN_GLOBAL, RNAT_GLOBAL
nextfactor	<String>	Read-write	On success invoke label. Applicable for advanced authentication policy binding.
gotopriorityexpression	<String>	Read-write	Applicable only to advance authentication policy. Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation.
policyname	<String>	Read-write	The name of the command policy.
__count	<Double>	Read-write	count parameter

Operations

Query-parameters:

bulkbindings

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemglobal_auditnslogpolicy_binding?**bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systemglobal_auditnslogpolicy_binding": [ {

"priority":<Double_value>,

"globalbindtype":<String_value>,

"nextfactor":<String_value>,

"gotopriorityexpression":<String_value>,

"policyname":<String_value>

}]}
```

count

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemglobal_auditnslogpolicy_binding?**count=yes**

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systemglobal_auditnslogpolicy_binding": [ { "__count": "#no"} ] }
```

systemglobal_auditsyslogpolicy_binding

Binding object showing the auditsyslogpolicy that can be bound to systemglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	The priority of the command policy.
globalbindtype	<String>	Read-write	. Default value: SYSTEM_GLOBAL Possible values = SYSTEM_GLOBAL, VPN_GLOBAL, RNAT_GLOBAL
nextfactor	<String>	Read-write	On success invoke label. Applicable for advanced authentication policy binding.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Applicable only to advance authentication policy. Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation.
policyname	<String>	Read-write	The name of the command policy.
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/systemglobal_auditsyslogpolicy_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{

"systemglobal_auditsyslogpolicy_binding":{

"policyname":<String_value>,

"priority":<Double_value>,

"nextfactor":<String_value>,

"gotopriorityexpression":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemglobal_auditsyslogpolicy_binding

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemglobal_auditsyslogpolicy_binding?**args=policyname:<String_value>**

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemglobal_auditsyslogpolicy_binding

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemglobal_auditsyslogpolicy_binding?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of systemglobal_auditsyslogpolicy_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemglobal_auditsyslogpolicy_binding?**pagesize=#no;pageno=#no**

Use this query-parameter to get the systemglobal_auditsyslogpolicy_binding resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```

systemglobal_authenticationtacacspolicy_binding

Binding object showing the authenticationtacacspolicy that can be bound to systemglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	The priority of the command policy.
globalbindtype	<String>	Read-write	. Default value: SYSTEM_GLOBAL Possible values = SYSTEM_GLOBAL, VPN_GLOBAL, RNAT_GLOBAL
nextfactor	<String>	Read-write	On success invoke label. Applicable for advanced authentication policy binding.
gotopriorityexpression	<String>	Read-write	Applicable only to advance authentication policy. Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation.
policyname	<String>	Read-write	The name of the command policy.
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

systemgroup

Configuration for system group resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
groupname	<String>	Read-write	Name for the group. Must begin with a letter, number, or the underscore (_) character, and must contain only alphanumeric, hyphen (-), period (.), hash (#), space ( ), at (@), equal (=), colon (:), and underscore characters. Cannot be changed after the group is created.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my group" or 'my group'). Minimum length = 1
promptstring	<String>	Read-write	String to display at the command-line prompt. Can consist of letters, numbers, hyphen (-), period (.), hash (#), space ( ), at (@), equal (=), colon (:), underscore (_), and the following variables: * %u - Will be replaced by the user name. * %h - Will be replaced by the hostname of the Citrix ADC. * %t - Will be replaced by the current time in 12-hour format. * %T - Will be replaced by the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			current time in 24-hour format. * %d - Will be replaced by the current date. * %s - Will be replaced by the state of the Citrix ADC. Note: The 63-character limit for the length of the string does not apply to the characters that replace the variables. Minimum length = 1
timeout	<Double>	Read-write	CLI session inactivity timeout, in seconds. If Restrictedtimeout argument of system parameter is enabled, Timeout can have values in the range [300-86400] seconds.If Restrictedtimeout argument of system parameter is disabled, Timeout can have values in the range [0, 10-100000000]

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			seconds. Default value is 900 seconds.
__count	<Double>	Read-only	count parameter

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
partitionname	<String>	Read-write	Name of the Partition to bind to the system group. Minimum length = 1
groupname	<String>	Read-write	Name of the system group. Minimum length = 1
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/systemgroup_nspartition_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{

"systemgroup_nspartition_binding":{

<b>"groupname":<String_value>,

</b>"partitionname":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemgroup_nspartition_binding/groupname_value<String>

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemgroup_nspartition_binding/groupname_value<String>?**args=partitionname:<String_value>**

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemgroup_nspartition_binding/groupname_value<String>

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemgroup_nspartition_binding/groupname_value<String>?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of systemgroup_nspartition_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemgroup_nspartition_binding/groupname_value<String>?**pagesize=#no;pageno=#no**

Use this query-parameter to get the systemgroup_nspartition_binding resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systemgroup_nspartition_binding": [ {

"partitionname":<String_value>,

"groupname":<String_value>

}]}
```

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemgroup_nspartition_binding

Query-parameters:

bulkbindings

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemgroup_nspartition_binding?**bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systemgroup_nspartition_binding": [ {

"partitionname":<String_value>,

"groupname":<String_value>

}]}
```

count

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemgroup_nspartition_binding/groupname_value<String>?**count=yes**

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{"systemgroup_nspartition_binding": [ { "__count": "#no"} ] }
```

systemgroup_systemcmdpolicy_binding

Binding object showing the systemcmdpolicy that can be bound to systemgroup.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	The priority of the command policy.
policyname	<String>	Read-write	The name of command policy.
groupname	<String>	Read-write	Name of the system group. Minimum length = 1
__count	<Double>	Read-write	count parameter

```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

systemparameter

Configuration for system parameter resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
rbaonresponse	<String>	Read-write	Enable or disable Role-Based Authentication (RBA) on responses. Default value: ENABLED Possible values = ENABLED, DISABLED
promptstring	<String>	Read-write	String to display at the command-line prompt. Can consist of letters, numbers, hyphen (-), period (.), hash (#), space ( ), at (@), equal (=), colon (:), underscore (_), and the following variables: * %u - Will be replaced by the user name.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* %h - Will be replaced by the hostname of the Citrix ADC. * %t - Will be replaced by the current time in 12-hour format. * %T - Will be replaced by the current time in 24-hour format. * %d - Will be replaced by the current date. * %s - Will be replaced by the state of the Citrix ADC. Note: The 63-character limit for the length of the string does not apply to the characters that replace the variables. Minimum length = 1
natpcbforceflushlimit	<Double>	Read-write	Flush the system if the number of Network Address Translation Protocol

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Control Blocks (NATPCBs) exceeds this value. Default value: 2147483647 Minimum value = 1000
natpcbrstontimeout	<String>	Read-write	Send a reset signal to client and server connections when their NATPCBs time out. Avoids the buildup of idle TCP connections on both the sides. Default value: DISABLED Possible values = ENABLED, DISABLED
timeout	<Double>	Read-write	CLI session inactivity timeout, in seconds. If Restrictedtimeout argument is enabled, Timeout can have values in the range [300-86400] seconds. If Restrictedtimeout argument is disabled, Timeout can have values in the range [0, 10-100000000] seconds. Default

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			value is 900 seconds.
localauth	<String>	Read-write	When enabled, local users can access Citrix ADC even when external authentication is configured. When disabled, local users are not allowed to access the Citrix ADC, Local users can access the Citrix ADC only when the configured external authentication servers are unavailable. This parameter is not applicable to SSH Key-based authentication. Default value: ENABLED Possible values = ENABLED, DISABLED
minpasswordlen	<Double>	Read-write	Minimum length of system user password. When strong password is enabled default minimum length is 4. User entered value can be greater than or equal to 4. Default mininum value is 1 when strong

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			password is disabled. Maximum value is 127 in both cases. Minimum value = 1 Maximum value = 127
strongpassword	<String>	Read-write	After enabling strong password (enableall / enablelocal - not included in exclude list), all the passwords / sensitive information must have - Atleast 1 Lower case character, Atleast 1 Upper case character, Atleast 1 numeric character, Atleast 1 special character (~, `, !, @, #, $, %, \^, ;, *, -, _, =, +, {, }, [,], |, \, :, <, >, /, ., ,, " "). Exclude list in case of enablelocal is - NS_FIPS, NS_CRL, NS_RSAKEY, NS_PKCS12, NS_PKCS8, NS_LDAP, NS_TACACS, NS_TACACSACTION, NS_RADIUS, NS_RADIUSACTION, NS_ENCRYPTION_PARAMS. So no

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Strong Password checks will be performed on these ObjectType commands for enablelocal case. Default value: disabled Possible values = enableall, enablelocal, disabled
restrictedtimeout	<String>	Read-write	Enable/Disable the restricted timeout behaviour. When enabled, timeout cannot be configured beyond admin configured timeout and also it will have the [minimum - maximum] range check. When disabled, timeout will have the old behaviour. By default the value is disabled. Default value: DISABLED Possible values = ENABLED, DISABLED
fipsusermode	<String>	Read-write	Use this option to set the FIPS mode for key user-land processes. When

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			enabled, these user-land processes will operate in FIPS mode. In this mode, theses processes will use FIPS 140-2 Level-1 certified crypto algorithms. Default is disabled, wherein, these user-land processes will not operate in FIPS mode. Default value: DISABLED Possible values = ENABLED, DISABLED
doppler	<String>	Read-write	Enable or disable Doppler. Default value: 0 Possible values = ENABLED, DISABLED
googleanalytics	<String>	Read-write	Enable or disable Google analytics. Default value: DISABLED Possible values = ENABLED, DISABLED
totalauthtimeout	<Double>	Read-write	Total time a request can take for

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			authentication/ authorization. Default value: 20 Minimum value = 5 Maximum value = 120
cliloglevel	<String>	Read-write	Audit log level, which specifies the types of events to log for cli executed commands. Available values function as follows: * EMERGENCY - Events that indicate an immediate crisis on the server. * ALERT - Events that might require action. * CRITICAL - Events that indicate an imminent server crisis. * ERROR - Events that indicate some type of error. * WARNING - Events that require action in the near future.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* NOTICE - Events that the administrator should know about. * INFORMATIONAL - All but low-level events. * DEBUG - All events, in extreme detail. Default value: INFORMATIONAL Possible values = EMERGENCY, ALERT, CRITICAL, ERROR, WARNING, NOTICE, INFORMATIONAL, DEBUG
forcepasswordchange	<String>	Read-write	Enable or disable force password change for nsroot user. Default value: DISABLED Possible values = ENABLED, DISABLED
basicauth	<String>	Read-write	Enable or disable basic authentication for Nitro API.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: ENABLED Possible values = ENABLED, DISABLED
reauthonauthparamchange	<String>	Read-write	Enable or disable External user reauthentication when authentication parameter changes. Default value: DISABLED Possible values = ENABLED, DISABLED
removesensitivefiles	<String>	Read-write	Use this option to remove the sensitive files from the system like authorise keys, public keys etc. The commands which will remove sensitive files when this system paramter is enabled are rm cluster instance, rm cluster node, rm ha node, clear config full, join cluster and add cluster instance. Default value: DISABLED Possible values = ENABLED, DISABLED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
maxclient	<Double>	Read-only	Maximum number of client connection allowed by the system. Minimum value = 20 Maximum value = 40
allowdefaultpartition	<String>	Read-only	Enable/Disable the allowing partition users to access default partition. Default value: NO Possible values = YES, NO

Operations

UPDATE| UNSET| GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

update

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemparameter

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"systemparameter":{

```

systemsession

Configuration for system session resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sid	<Double>	Read-write	ID of the system session about which to display information. Minimum value = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
all	<Boolean>	Read-write	Terminate all the system sessions except the current session.
username	<String>	Read-only	user name of the session.
logintime	<String>	Read-only	logged-in time of this session.
logintimelocal	<String>	Read-only	logged-in time (in local ADC timezone) of this session.
lastactivitytime	<String>	Read-only	last activity time of this session.
lastactivitytimelocal	<String>	Read-only	last activity time (in local ADC timezone) of this session.
expirytime	<Integer>	Read-only	Time left in expire the session in seconds.
numofconnections	<Double>	Read-only	number of connection using this token.
currentconn	<Boolean>	Read-only	True if the token is used for current session.
clienttype	<String>	Read-only	client type of the session. Possible values = CLI, CONSOLE, API, GUI

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
partitionname	<String>	Read-only	Name of the partition where the user is currently present.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

KILL| GET (ALL)| GET| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:` *

Mandatory parameters are marked in redand placeholder content is marked in <green>.

kill

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemsession?**action=kill**

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"systemsession":{

"sid":<Double_value>,

"all":<Boolean_value>

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemsession

Query-parameters:

attrs

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemsession?**attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemsession?**filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of systemsession resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

view

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemsession?**view=summary**

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemsession?**pagesize=#no;pageno=#no**

Use this query-parameter to get the systemsession resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemsshkey?**args=sshkeytype:<String_value>**

Use this query-parameter to get systemsshkey resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systemsshkey": [ {

sshkeytype:<String_value>"name":<String_value>

}]}
```

systemuser

Configuration for system user resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
username	<String>	Read-write	Name for a user. Must begin with a letter, number, or the underscore (_) character, and must contain only alphanumeric, hyphen (-), period (.), hash (#), space ( ), at (@), equal (=),

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			colon (:), and underscore characters. Cannot be changed after the user is added. CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my user" or 'my user'). Minimum length = 1
password	<String>	Read-write	Password for the system user. Can include any ASCII character. Minimum length = 1
externalauth	<String>	Read-write	Whether to use external authentication servers for the system user authentication or not. Default value: ENABLED Possible values = ENABLED, DISABLED
promptstring	<String>	Read-write	String to display at the command-line prompt. Can consist of letters, numbers, hyphen (-), period (.),

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			hash (#), space ( ), at (@), equal (=), colon (:), underscore (_), and the following variables: * %u - Will be replaced by the user name. * %h - Will be replaced by the hostname of the Citrix ADC. * %t - Will be replaced by the current time in 12-hour format. * %T - Will be replaced by the current time in 24-hour format. * %d - Will be replaced by the current date. * %s - Will be replaced by the state of the Citrix ADC. Note: The 63-character limit for the length of the string does not apply to the characters that

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			replace the variables. Minimum length = 1
timeout	<Double>	Read-write	CLI session inactivity timeout, in seconds. If Restrictedtimeout argument of system parameter is enabled, Timeout can have values in the range [300-86400] seconds. If Restrictedtimeout argument of system parameter is disabled, Timeout can have values in the range [0, 10-100000000] seconds. Default value is 900 seconds.
logging	<String>	Read-write	Users logging privilege. Default value: DISABLED Possible values = ENABLED, DISABLED
maxsession	<Double>	Read-write	Maximum number of client connection allowed per user. Default value: 20

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 1 Maximum value = 40
encrypted	<Boolean>	Read-only	.
hashmethod	<String>	Read-only	. Possible values = SHA1, SHA512
promptinheritedfrom	<String>	Read-only	From where the prompt has been inherited. Possible values = User, Group, Global, Climode
timeoutkind	<String>	Read-only	From where the timeout has been inherited. Possible values = User, Group, Global, Climode
__count	<Double>	Read-only	count parameter

Query-parameters:

bulkbindings

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemuser_binding?**bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systemuser_binding": [ {

"username":<String_value>,

"systemuser_systemgroup_binding":<systemuser_systemgroup_binding[]_value>,

"systemuser_nspartition_binding":<systemuser_nspartition_binding[]_value>,

"systemuser_systemcmdpolicy_binding":<systemuser_systemcmdpolicy_binding[]
_value>

}]}
```

systemuser_nspartition_binding

Binding object showing the nspartition that can be bound to systemuser.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
username	<String>	Read-write	Name of the system-user entry to which to bind the command policy. Minimum length = 1
partitionname	<String>	Read-write	Name of the Partition to bind to the system user.
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/systemuser_nspartition_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{

"systemuser_nspartition_binding":{

<b>"username":<String_value>,

</b>"partitionname":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemuser_nspartition_binding/username_value<String>

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemuser_nspartition_binding/username_value<String>?**args=partitionname:<String_value>**

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemuser_nspartition_binding/username_value<String>

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemuser_nspartition_binding/username_value<String>?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of systemuser_nspartition_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemuser_nspartition_binding/username_value<String>?**pagesize=#no;pageno=#no**

Use this query-parameter to get the systemuser_nspartition_binding resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systemuser_nspartition_binding": [ {

"username":<String_value>,
```

```
"partitionname":<String_value>

}]}
```

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemuser_nspartition_binding

Query-parameters:

bulkbindings

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/systemuser_nspartition_binding?**bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Traffic Management

Traffic Management

TM session/policy configuration.

NAME	DESCRIPTION
tmformssoaction	Configuration for Form sso action
tmglobal_auditnslogpolicy_binding	Binding object showing the auditnslogpolicy that can be bound to tmglobal
tmglobal_auditsyslogpolicy_binding	Binding object showing the auditsyslogpolicy that can be bound to tmglobal
tmglobal_binding	Binding object showing the resources that can be bound to tmglobal
tmglobal_tmsessionpolicy_binding	Binding object showing the tmsessionpolicy that can be bound to tmglobal
tmglobal_tmtrafficpolicy_binding	Binding object showing the tmtrafficpolicy that can be bound to tmglobal
tmsamlssoprofile	Configuration for SAML sso action
tmsessionaction	Configuration for TM session action
tmsessionparameter	Configuration for session parameter
tmsessionpolicy	Configuration for TM session policy
tmsessionpolicy_aaagroup_binding	Binding object showing the aaagroup that can be bound to tmsessionpolicy
tmsessionpolicy_aaauser_binding	Binding object showing the aaauser that can be bound to tmsessionpolicy

NAME	DESCRIPTION
tmsessionpolicy_authenticationvserver_binding	Binding object showing the authenticationvserver that can be bound to tmsessionpolicy
tmsessionpolicy_binding	Binding object showing the resources that can be bound to tmsessionpolicy
tmsessionpolicy_tmglobal_binding	Binding object showing the tmglobal that can be bound to tmsessionpolicy
tmtrafficaction	Configuration for TM traffic action
tmtrafficpolicy	Configuration for TM traffic policy
tmtrafficpolicy_binding	Binding object showing the resources that can be bound to tmtrafficpolicy
tmtrafficpolicy_csvserver_binding	Binding object showing the csvserver that can be bound to tmtrafficpolicy
tmtrafficpolicy_lbvserver_binding	Binding object showing the lbvserver that can be bound to tmtrafficpolicy
tmtrafficpolicy_tmglobal_binding	Binding object showing the tmglobal that can be bound to tmtrafficpolicy

tmformssoaction

Configuration for Form sso action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the new form-based single sign-on profile. Must begin with an ASCII alphanumeric or underscore (_)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after an SSO action is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my action" or 'my action'). Minimum length = 1
actionurl	<String>	Read-write	URL to which the completed form is submitted. Minimum length = 1
userfield	<String>	Read-write	Name of the form field in which the user types in the user ID. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
passwdfield	<String>	Read-write	Name of the form field in which the user types in the password. Minimum length = 1
ssosuccessrule	<String>	Read-write	Expression, that checks to see if single sign-on is successful.
namevaluepair	<String>	Read-write	Name-value pair attributes to send to the server in addition to sending the username and password. Value names are separated by an ampersand (;) (for example, name1=value1;name2=value2).
responsesize	<Double>	Read-write	Number of bytes, in the response, to parse for extracting the forms. Default value: 8096
nvtype	<String>	Read-write	Type of processing of the name-value pair. If you specify STATIC, the values configured by the administrator are used. For DYNAMIC, the response is parsed, and the form is extracted and then submitted.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: DYNAMIC Possible values = STATIC, DYNAMIC
submitmethod	<String>	Read-write	HTTP method used by the single sign-on form to send the logon credentials to the logon server. Applies only to STATIC name-value type. Default value: GET Possible values = GET, POST
__count	<Double>	Read-only	count parameter

Operations

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	The priority of the policy.
policyname	<String>	Read-write	The name of the policy.
gotopriorityexpression	<String>	Read-write	Applicable only to advance tmsession policy. Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a priority number that is numerically higher than the highest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
bindpolicytype	<Double>	Read-only	Bound policy type.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/tmglobal_auditnslogpolicy_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{
"tmglobal_auditnslogpolicy_binding":{
"policyname":<String_value>,
"priority":<Double_value>,
"gotopriorityexpression":<String_value>
}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmglobal_auditnslogpolicy_binding

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmglobal_auditnslogpolicy_binding?**args=policyname:<String_value>**

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmglobal_auditnslogpolicy_binding

tmglobal_tmtrafficpolicy_binding

Binding object showing the tmtrafficpolicy that can be bound to tmglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	The priority of the policy.
globalbindtype	<String>	Read-write	. Default value: SYSTEM_GLOBAL Possible values = SYSTEM_GLOBAL, VPN_GLOBAL, RNAT_GLOBAL
policyname	<String>	Read-write	The name of the policy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-write	Applicable only to advance tmsession policy. Expression or other value specifying the next policy to be evaluated if the current policy evaluates to TRUE. Specify one of the following values: * NEXT - Evaluate the policy with the next higher priority number. * END - End policy evaluation. * An expression that evaluates to a number. If you specify an expression, the number to which it evaluates determines the next policy to evaluate, as follows: * If the expression evaluates to a higher numbered priority, the policy with that priority is evaluated next. * If the expression evaluates to the priority of the current policy, the policy with the next higher numbered priority is evaluated next. * If the expression evaluates to a priority number

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			that is numerically higher than the highest numbered priority, policy evaluation ends. An UNDEF event is triggered if: * The expression is invalid. * The expression evaluates to a priority number that is numerically lower than the current policy's priority. * The expression evaluates to a priority number that is between the current policy's priority number (say, 30) and the highest priority number (say, 100), but does not match any configured priority number (for example, the expression evaluates to the number 85). This example assumes that the priority number increments by 10 for every successive policy, and therefore a priority number of 85 does not exist in the policy label.
type	<String>	Read-write	Bindpoint to which the policy is bound.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = REQ_OVERRIDE, REQ_DEFAULT, RES_OVERRIDE, RES_DEFAULT
bindpolicytype	<Double>	Read-only	Bound policy type.
__count	<Double>	Read-only	count parameter

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmglobal_tmtrafficpolicy_binding?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of tmglobal_tmtrafficpolicy_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmglobal_tmtrafficpolicy_binding?**pagesize=#no;pageno=#no**

Use this query-parameter to get the tmglobal_tmtrafficpolicy_binding resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "tmglobal_tmtrafficpolicy_binding": [ {

"priority":<Double_value>,

"globalbindtype":<String_value>,

"policyname":<String_value>,

"gotopriorityexpression":<String_value>,

"type":<String_value>,

"bindpolicytype":<Double_value>

}]}
```

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmglobal_tmtrafficpolicy_binding

Query-parameters:

bulkbindings

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmglobal_tmtrafficpolicy_binding?**bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "tmglobal_tmtrafficpolicy_binding": [ {

"priority":<Double_value>,

"globalbindtype":<String_value>,

"policyname":<String_value>,

"gotopriorityexpression":<String_value>,

"bindpolicytype":<Double_value>

}]}
```

count

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmglobal_tmtrafficpolicy_binding?**count=yes**

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "tmglobal_tmtrafficpolicy_binding": [ { "__count": "#no"} ] }
```

tmsamlssoprofile

Configuration for SAML sso action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the new saml single sign-on profile. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after an SSO action is created.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my action" or 'my action'). Minimum length = 1
samlsigningcertname	<String>	Read-write	Name of the SSL certificate that is used to Sign Assertion. Minimum length = 1
assertionconsumerserviceurl	<String>	Read-write	URL to which the assertion is to be sent. Minimum length = 1
relaystaterule	<String>	Read-write	Expression to extract relaystate to be sent along with assertion. Evaluation of this expression should return TEXT content. This is typically a targ et url to which user is redirected after the recipient

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			validates SAML token.
sendpassword	<String>	Read-write	Option to send password in assertion. Default value: OFF Possible values = ON, OFF
samlissuername	<String>	Read-write	The name to be used in requests sent from Citrix ADC to IdP to uniquely identify Citrix ADC. Minimum length = 1
signaturealg	<String>	Read-write	Algorithm to be used to sign/verify SAML transactions. Default value: RSA-SHA256 Possible values = RSA-SHA1, RSA-SHA256
digestmethod	<String>	Read-write	Algorithm to be used to compute/verify digest for SAML transactions. Default value: SHA256 Possible values = SHA1, SHA256
audience	<String>	Read-write	Audience for which assertion sent by IdP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			is applicable. This is typically entity name or url that represents ServiceProvider.
nameidformat	<String>	Read-write	Format of Name Identifier sent in Assertion. Default value: transient Possible values = Unspecified, emailAddress, X509SubjectName, WindowsDomainQualifiedName, kerberos, entity, persistent, transient
nameidexpr	<String>	Read-write	Expression that will be evaluated to obtain NameIdentifier to be sent in assertion. Maximum length = 128
attribute1	<String>	Read-write	Name of attribute1 that needs to be sent in SAML Assertion.
attribute1expr	<String>	Read-write	Expression that will be evaluated to obtain attribute1's value to be sent in Assertion. Maximum length = 128

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute1friendlyname	<String>	Read-write	User-Friendly Name of attribute1 that needs to be sent in SAML Assertion.
attribute1format	<String>	Read-write	Format of Attribute1 to be sent in Assertion. Possible values = URI, Basic
attribute2	<String>	Read-write	Name of attribute2 that needs to be sent in SAML Assertion.
attribute2expr	<String>	Read-write	Expression that will be evaluated to obtain attribute2's value to be sent in Assertion. Maximum length = 128
attribute2friendlyname	<String>	Read-write	User-Friendly Name of attribute2 that needs to be sent in SAML Assertion.
attribute2format	<String>	Read-write	Format of Attribute2 to be sent in Assertion. Possible values = URI, Basic
attribute3	<String>	Read-write	Name of attribute3 that needs to be sent in SAML Assertion.
attribute3expr	<String>	Read-write	Expression that will be evaluated to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			obtain attribute3's value to be sent in Assertion. Maximum length = 128
attribute3friendlyname	<String>	Read-write	User-Friendly Name of attribute3 that needs to be sent in SAML Assertion.
attribute3format	<String>	Read-write	Format of Attribute3 to be sent in Assertion. Possible values = URI, Basic
attribute4	<String>	Read-write	Name of attribute4 that needs to be sent in SAML Assertion.
attribute4expr	<String>	Read-write	Expression that will be evaluated to obtain attribute4's value to be sent in Assertion. Maximum length = 128
attribute4friendlyname	<String>	Read-write	User-Friendly Name of attribute4 that needs to be sent in SAML Assertion.
attribute4format	<String>	Read-write	Format of Attribute4 to be sent in Assertion. Possible values = URI, Basic

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute5	<String>	Read-write	Name of attribute5 that needs to be sent in SAML Assertion.
attribute5expr	<String>	Read-write	Expression that will be evaluated to obtain attribute5's value to be sent in Assertion. Maximum length = 128
attribute5friendlyname	<String>	Read-write	User-Friendly Name of attribute5 that needs to be sent in SAML Assertion.
attribute5format	<String>	Read-write	Format of Attribute5 to be sent in Assertion. Possible values = URI, Basic
attribute6	<String>	Read-write	Name of attribute6 that needs to be sent in SAML Assertion.
attribute6expr	<String>	Read-write	Expression that will be evaluated to obtain attribute6's value to be sent in Assertion. Maximum length = 128
attribute6friendlyname	<String>	Read-write	User-Friendly Name of attribute6 that needs to be sent in SAML Assertion.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute6format	<String>	Read-write	Format of Attribute6 to be sent in Assertion. Possible values = URI, Basic
attribute7	<String>	Read-write	Name of attribute7 that needs to be sent in SAML Assertion.
attribute7expr	<String>	Read-write	Expression that will be evaluated to obtain attribute7's value to be sent in Assertion. Maximum length = 128
attribute7friendlyname	<String>	Read-write	User-Friendly Name of attribute7 that needs to be sent in SAML Assertion.
attribute7format	<String>	Read-write	Format of Attribute7 to be sent in Assertion. Possible values = URI, Basic
attribute8	<String>	Read-write	Name of attribute8 that needs to be sent in SAML Assertion.
attribute8expr	<String>	Read-write	Expression that will be evaluated to obtain attribute8's value to be sent in Assertion. Maximum length = 128

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute8friendlyname	<String>	Read-write	User-Friendly Name of attribute8 that needs to be sent in SAML Assertion.
attribute8format	<String>	Read-write	Format of Attribute8 to be sent in Assertion. Possible values = URI, Basic
attribute9	<String>	Read-write	Name of attribute9 that needs to be sent in SAML Assertion.
attribute9expr	<String>	Read-write	Expression that will be evaluated to obtain attribute9's value to be sent in Assertion. Maximum length = 128
attribute9friendlyname	<String>	Read-write	User-Friendly Name of attribute9 that needs to be sent in SAML Assertion.
attribute9format	<String>	Read-write	Format of Attribute9 to be sent in Assertion. Possible values = URI, Basic
attribute10	<String>	Read-write	Name of attribute10 that needs to be sent in SAML Assertion.
attribute10expr	<String>	Read-write	Expression that will be evaluated to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			obtain attribute10's value to be sent in Assertion. Maximum length = 128
attribute10friendlyname	<String>	Read-write	User-Friendly Name of attribute10 that needs to be sent in SAML Assertion.
attribute10format	<String>	Read-write	Format of Attribute10 to be sent in Assertion. Possible values = URI, Basic
attribute11	<String>	Read-write	Name of attribute11 that needs to be sent in SAML Assertion.
attribute11expr	<String>	Read-write	Expression that will be evaluated to obtain attribute11's value to be sent in Assertion. Maximum length = 128
attribute11friendlyname	<String>	Read-write	User-Friendly Name of attribute11 that needs to be sent in SAML Assertion.
attribute11format	<String>	Read-write	Format of Attribute11 to be sent in Assertion. Possible values = URI, Basic

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute12	<String>	Read-write	Name of attribute12 that needs to be sent in SAML Assertion.
attribute12expr	<String>	Read-write	Expression that will be evaluated to obtain attribute12's value to be sent in Assertion. Maximum length = 128
attribute12friendlyname	<String>	Read-write	User-Friendly Name of attribute12 that needs to be sent in SAML Assertion.
attribute12format	<String>	Read-write	Format of Attribute12 to be sent in Assertion. Possible values = URI, Basic
attribute13	<String>	Read-write	Name of attribute13 that needs to be sent in SAML Assertion.
attribute13expr	<String>	Read-write	Expression that will be evaluated to obtain attribute13's value to be sent in Assertion. Maximum length = 128
attribute13friendlyname	<String>	Read-write	User-Friendly Name of attribute13 that needs to be sent in SAML Assertion.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute13format	<String>	Read-write	Format of Attribute13 to be sent in Assertion. Possible values = URI, Basic
attribute14	<String>	Read-write	Name of attribute14 that needs to be sent in SAML Assertion.
attribute14expr	<String>	Read-write	Expression that will be evaluated to obtain attribute14's value to be sent in Assertion. Maximum length = 128
attribute14friendlyname	<String>	Read-write	User-Friendly Name of attribute14 that needs to be sent in SAML Assertion.
attribute14format	<String>	Read-write	Format of Attribute14 to be sent in Assertion. Possible values = URI, Basic
attribute15	<String>	Read-write	Name of attribute15 that needs to be sent in SAML Assertion.
attribute15expr	<String>	Read-write	Expression that will be evaluated to obtain attribute15's value to be sent in Assertion. Maximum length = 128

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
attribute15friendlyname	<String>	Read-write	User-Friendly Name of attribute15 that needs to be sent in SAML Assertion.
attribute15format	<String>	Read-write	Format of Attribute15 to be sent in Assertion. Possible values = URI, Basic
attribute16	<String>	Read-write	Name of attribute16 that needs to be sent in SAML Assertion.
attribute16expr	<String>	Read-write	Expression that will be evaluated to obtain attribute16's value to be sent in Assertion. Maximum length = 128
attribute16friendlyname	<String>	Read-write	User-Friendly Name of attribute16 that needs to be sent in SAML Assertion.
attribute16format	<String>	Read-write	Format of Attribute16 to be sent in Assertion. Possible values = URI, Basic
encryptassertion	<String>	Read-write	Option to encrypt assertion when Citrix ADC sends one. Default value: OFF

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ON, OFF
samlspcertname	<String>	Read-write	Name of the SSL certificate of peer/ receving party using which Assertion is encrypted. Minimum length = 1
encryptionalgorithm	<String>	Read-write	Algorithm to be used to encrypt SAML assertion. Default value: AES256 Possible values = DES3, AES128, AES192, AES256
skewtime	<Double>	Read-write	This option specifies the number of minutes on either side of current time that the assertion would be valid. For example, if skewTime is 10, then assertion would be valid from (current time - 10) min to (current time + 10) min, ie 20min in all. Default value: 5
signassertion	<String>	Read-write	Option to sign portions of assertion when Citrix ADC IDP sends one. Based on the user selection,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			either Assertion or Response or Both or none can be signed. Default value: ASSERTION Possible values = NONE, ASSERTION, RESPONSE, BOTH
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

ADD| DELETE| UPDATE| UNSET| GET (ALL)| GET| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:` *

Mandatory parameters are marked in redand placeholder content is marked in <green>.

```

tmsessionaction

Configuration for TM session action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the session action. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after a session action is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my action" or 'my action'). Minimum length = 1
sesstimeout	<Double>	Read-write	Session timeout, in minutes. If there is no traffic during the timeout period, the user is disconnected and must reauthenticate to access intranet resources. Minimum value = 1
defaultauthorizationaction	<String>	Read-write	Allow or deny access to content for which

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			there is no specific authorization policy. Possible values = ALLOW, DENY
sso	<String>	Read-write	Use single sign-on (SSO) to log users on to all web applications automatically after they authenticate, or pass users to the web application logon page to authenticate to each application individually. Default value: OFF Possible values = ON, OFF
ssocredential	<String>	Read-write	Use the primary or secondary authentication credentials for single sign-on (SSO). Possible values = PRIMARY, SECONDARY
ssodomain	<String>	Read-write	Domain to use for single sign-on (SSO). Minimum length = 1 Maximum length = 32

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httponlycookie	<String>	Read-write	Allow only an HTTP session cookie, in which case the cookie cannot be accessed by scripts. Possible values = YES, NO
kcdaccount	<String>	Read-write	Kerberos constrained delegation account name. Minimum length = 1 Maximum length = 32
persistentcookie	<String>	Read-write	Enable or disable persistent SSO cookies for the traffic management (TM) session. A persistent cookie remains on the user device and is sent with each HTTP request. The cookie becomes stale if the session ends. This setting is overwritten if a traffic action sets persistent cookie to OFF. Note: If persistent cookie is enabled, make sure you set the persistent cookie validity.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ON, OFF
persistentcookievalidity	<Double>	Read-write	Integer specifying the number of minutes for which the persistent cookie remains valid. Can be set only if the persistent cookie setting is enabled. Minimum value = 1
homepage	<String>	Read-write	Web address of the home page that a user is displayed when authentication vserver is bookmarked and used to login.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

ADD| DELETE| UPDATE| UNSET| GET (ALL)| GET| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionaction

tmsessionpolicy

Configuration for TM session policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the session policy. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. Cannot be changed after a session policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			name in double or single quotation marks (for example, "my policy" or 'my policy'). Minimum length = 1
rule	<String>	Read-write	Expression, against which traffic is evaluated. Both classic and advance expressions are supported in default partition but only advance expressions in non-default partition. The following requirements apply only to the Citrix ADC CLI: * If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation marks, escape the quotations by using the \ character.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks.
action	<String>	Read-write	Action to be applied to connections that match this policy. Minimum length = 1
expressiontype	<String>	Read-only	Type of policy (Classic/Advanced) . Possible values = Classic Policy, Advanced Policy
hits	<Double>	Read-only	Number of hits.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
__count	<Double>	Read-only	count parameter

Operations

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

update

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"tmsessionpolicy":{

<b>"name":<String_value>,

</b>"rule":<String_value>,

"action":<String_value>

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

unset

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy?**action=unset**

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"tmsessionpolicy":{

<b>"name":<String_value>,

</b>"rule":true,

"action":true

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy

Query-parameters:

attrs

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy?**attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy?**filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of tmsessionpolicy resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

view

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy?**view=summary**

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy?**pagesize=#no;pageno=#no**

Use this query-parameter to get the tmsessionpolicy resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```

```

tmsessionpolicy_aaagroup_binding

Binding object showing the aaagroup that can be bound to tmsessionpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	The entity name to which policy is bound.
name	<String>	Read-write	Name of the session policy for which to display detailed information. Minimum length = 1
priority	<Double>	Read-only	.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
activepolicy	<Double>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy_aaagroup_binding/name_value<String>

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy_aaagroup_binding/name_value<String>?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of tmsessionpolicy_aaagroup_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy_aaagroup_binding/name_value<String>?**pagesize=#no;pageno=#no**

Use this query-parameter to get the tmsessionpolicy_aaagroup_binding resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "tmsessionpolicy_aaagroup_binding": [ {

"boundto":<String_value>,

"name":<String_value>,
```

```
"priority":<Double_value>,

"activepolicy":<Double_value>

}]}
```

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy_aaagroup_binding

Query-parameters:

bulkbindings

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmsessionpolicy_aaagroup_binding?**bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

tmtrafficaction

Configuration for TM traffic action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the traffic action. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after a traffic action is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			name in double or single quotation marks (for example, "my action" or 'my action'). Minimum length = 1
apptimeout	<Double>	Read-write	Time interval, in minutes, of user inactivity after which the connection is closed. Minimum value = 1 Maximum value = 715827
sso	<String>	Read-write	Use single sign-on for the resource that the user is accessing now. Possible values = ON, OFF
formssoaction	<String>	Read-write	Name of the configured form-based single sign-on profile.
persistentcookie	<String>	Read-write	Use persistent cookies for the traffic session. A persistent cookie remains on the user device and is sent with each HTTP request. The cookie becomes stale if the session ends.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = ON, OFF
initiatelogout	<String>	Read-write	Initiate logout for the traffic management (TM) session if the policy evaluates to true. The session is then terminated after two minutes. Possible values = ON, OFF
kcdaccount	<String>	Read-write	Kerberos constrained delegation account name. Default value: "None" Minimum length = 1 Maximum length = 32
samlssoprofile	<String>	Read-write	Profile to be used for doing SAML SSO to remote relying party. Minimum length = 1
forcedtimeout	<String>	Read-write	Setting to start, stop or reset TM session force timer. Possible values = START, STOP, RESET
forcedtimeoutval	<Double>	Read-write	Time interval, in minutes, for which

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			force timer should be set.
userexpression	<String>	Read-write	expression that will be evaluated to obtain username for SingleSignOn. Maximum length = 256
passwdexpression	<String>	Read-write	expression that will be evaluated to obtain password for SingleSignOn. Maximum length = 256
__count	<Double>	Read-only	count parameter

Operations

ADD| DELETE| UPDATE| UNSET| GET (ALL)| GET| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmtrafficaction

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"tmtrafficaction":{

<b>"name":<String_value>,

tmtrafficpolicy

Configuration for TM traffic policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the traffic policy. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after the policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my policy" or 'my policy'). Minimum length = 1
rule	<String>	Read-write	Name of the Citrix ADC named expression, or an expression, that the policy uses to determine whether to apply certain action on the current traffic.
action	<String>	Read-write	Name of the action to apply to requests or connections that match this policy. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
hits	<Double>	Read-only	Number of hits.
__count	<Double>	Read-only	count parameter

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmtrafficpolicy_lbvserver_binding/name_value<String>?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of tmtrafficpolicy_lbvserver_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmtrafficpolicy_lbvserver_binding/name_value<String>?**pagesize=#no;pageno=#no**

Use this query-parameter to get the tmtrafficpolicy_lbvserver_binding resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "tmtrafficpolicy_lbvserver_binding": [ {

"boundto":<String_value>,

"name":<String_value>,

"priority":<Double_value>,

"activepolicy":<Double_value>

}]}
```

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmtrafficpolicy_lbvserver_binding

Query-parameters:

bulkbindings

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmtrafficpolicy_lbvserver_binding?**bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "tmtrafficpolicy_lbvserver_binding": [ {

"boundto":<String_value>,

"name":<String_value>,

"priority":<Double_value>,

"activepolicy":<Double_value>

}]}
```

count

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmtrafficpolicy_lbvserver_binding/name_value<String>?**count=yes**

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{"tmtrafficpolicy_lbvserver_binding": [ { "__count": "#no"} ] }
```

tmtrafficpolicy_tmglobal_binding

Binding object showing the tmglobal that can be bound to tmtrafficpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	The entity name to which policy is bound.
name	<String>	Read-write	Name of the traffic policy for which to display detailed information. Minimum length = 1
priority	<Double>	Read-only	.
activepolicy	<Double>	Read-only	.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmtrafficpolicy_tmglobal_binding/name_value<String>

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmtrafficpolicy_tmglobal_binding/name_value<String>?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of tmtrafficpolicy_tmglobal_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tmtrafficpolicy_tmglobal_binding/name_value<String>?**pagesize=#no;pageno=#no**

Use this query-parameter to get the tmtrafficpolicy_tmglobal_binding resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```

Transform

Transform

URL Transformation configuration.

NAME	DESCRIPTION
transformaction	Configuration for transform action
transformglobal_binding	Binding object showing the resources that can be bound to transformglobal
transformglobal_transformpolicy_binding	Binding object showing the transformpolicy that can be bound to transformglobal
transformpolicy	Configuration for URL Transformation policy

NAME	DESCRIPTION
transformpolicy_binding	Binding object showing the resources that can be bound to transformpolicy
transformpolicy_csvserver_binding	Binding object showing the csvserver that can be bound to transformpolicy
transformpolicy_lbvserver_binding	Binding object showing the lbvserver that can be bound to transformpolicy
transformpolicy_transformglobal_binding	Binding object showing the transformglobal that can be bound to transformpolicy
transformpolicy_transformpolicylabel_binding	Binding object showing the transformpolicylabel that can be bound to transformpolicy
transformpolicylabel	Configuration for transform policy label
transformpolicylabel_binding	Binding object showing the resources that can be bound to transformpolicylabel
transformpolicylabel_policybinding_binding	Binding object showing the policybinding that can be bound to transformpolicylabel
transformpolicylabel_transformpolicy_binding	Binding object showing the transformpolicy that can be bound to transformpolicylabel
transformprofile	Configuration for URL Transformation profile
transformprofile_binding	Binding object showing the resources that can be bound to transformprofile
transformprofile_transformaction_binding	Binding object showing the transformaction that can be bound to transformprofile

transformaction

Configuration for transform action resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the URL transformation action. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after the URL Transformation action is added. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, ?my transform action? or ?my transform action). Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
profilename	<String>	Read-write	Name of the URL Transformation profile with which to associate this action. Minimum length = 1
priority	<Double>	Read-write	Positive integer specifying the priority of the action within the profile. A lower number specifies a higher priority. Must be unique within the list of actions bound to the profile. Policies are evaluated in the order of their priority numbers, and the first policy that matches is applied. Minimum value = 1 Maximum value = 2147483647
state	<String>	Read-write	Enable or disable this action. Default value: ENABLED Possible values = ENABLED, DISABLED
requrlfrom	<String>	Read-write	PCRE-format regular expression that describes the request URL pattern to be transformed.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1
requrlinto	<String>	Read-write	PCRE-format regular expression that describes the transformation to be performed on URLs that match the reqUrlFrom pattern. Minimum length = 1
resurlfrom	<String>	Read-write	PCRE-format regular expression that describes the response URL pattern to be transformed. Minimum length = 1
resurlinto	<String>	Read-write	PCRE-format regular expression that describes the transformation to be performed on URLs that match the resUrlFrom pattern. Minimum length = 1
cookiedomainfrom	<String>	Read-write	Pattern that matches the domain to be transformed in Set-Cookie headers. Minimum length = 1
cookiedomaininto	<String>	Read-write	PCRE-format regular expression that describes the transformation to be performed on cookie domains that match the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			cookieDomainFrom pattern. NOTE: The cookie domain to be transformed is extracted from the request. Minimum length = 1
comment	<String>	Read-write	Any comments to preserve information about this URL Transformation action.
continuematching	<String>	Read-only	Continue transforming using the next rule in the list. Possible values = ON, OFF
__count	<Double>	Read-only	count parameter

{ "transformglobal_binding": [ {

"transformglobal_transformpolicy_binding":<transformglobal_transformpolicy
_binding[]_value>
```

```
}]}
```

transformglobal_transformpolicy_binding

Binding object showing the transformpolicy that can be bound to transformglobal.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	Specifies the priority of the policy.
globalbindtype	<String>	Read-write	. Default value: SYSTEM_GLOBAL Possible values = SYSTEM_GLOBAL, VPN_GLOBAL, RNAT_GLOBAL
policyname	<String>	Read-write	Name of the transform policy.
labelname	<String>	Read-write	Name of the policy label to invoke if the current policy evaluates to TRUE, the invoke parameter is set, and the label type is Policy Label.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			current policy rule evaluates to TRUE.
invoke	<Boolean>	Read-write	If the current policy evaluates to TRUE, terminate evaluation of policies bound to the current policy label, and then forwards the request or response to the specified virtual server or evaluates the specified policy label.
type	<String>	Read-write	Specifies the bind point to which to bind the policy. Available settings function as follows: * REQ_OVERRIDE. Request override. Binds the policy to the priority request queue. * REQ_DEFAULT. Binds the policy to the default request queue. Possible values = REQ_OVERRIDE, REQ_DEFAULT
labeltype	<String>	Read-write	Type of invocation. Available settings function as follows: * reqvserver - Send the request to the specified request virtual server. *

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			resvserver - Send the response to the specified response virtual server. * policylabel - Invoke the specified policy label. Possible values = reqvserver, resvserver, policylabel
numpol	<Double>	Read-only	The number of policies bound to the bindpoint.
flowtype	<Double>	Read-only	flowtype of the bound transform policy.
__count	<Double>	Read-only	count parameter

transformpolicy

Configuration for URL Transformation policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the URL Transformation policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Can be changed after the URL Transformation policy is added. The following requirement applies only to the Citrix ADC CLI:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, ?my transform policy? or ?my transform policy). Minimum length = 1
rule	<String>	Read-write	Expression, or name of a named expression, against which to evaluate traffic. The following requirements apply only to the Citrix ADC CLI: * If the expression includes blank spaces, the entire expression must be enclosed in double quotation marks. * If the expression itself includes double quotation marks, you must escape the quotations by using the \ character.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks.
profilename	<String>	Read-write	Name of the URL Transformation profile to use to transform requests and responses that match the policy. Minimum length = 1
comment	<String>	Read-write	Any comments to preserve information about this URL Transformation policy.
logaction	<String>	Read-write	Log server to use to log connections that match this policy.
newname	<String>	Read-write	New name for the policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, ?my transform policy? or ?my transform policy). Minimum length = 1
hits	<Double>	Read-only	Number of hits.
isdefault	<Boolean>	Read-only	A value of true is returned if it is a default transform policy.
__count	<Double>	Read-only	count parameter

ADD| DELETE| UPDATE| UNSET| RENAME| GET (ALL)| GET| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicy

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"transformpolicy":{

<b>"name":<String_value>,

</b><b>"rule":<String_value>,

</b><b>"profilename":<String_value>,
```

```
</b>"comment":<String_value>,

"logaction":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicy/name_value<String>

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

update

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicy

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

Response Payload:

```
{"transformpolicylabel_policybinding_binding": [ { "__count": "#no"} ] }
```

transformpolicylabel_transformpolicy_binding

Binding object showing the transformpolicy that can be bound to transformpolicylabel.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	Specifies the priority of the policy.
policyname	<String>	Read-write	Name of the URL Transformation policy to bind to the policy label.
labelname	<String>	Read-write	Name of the URL Transformation policy label to which to bind the policy.
invoke_labelname	<String>	Read-write	Name of the policy label.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			evaluated if the current policy rule evaluates to TRUE.
invoke	<Boolean>	Read-write	If the current policy evaluates to TRUE, terminate evaluation of policies bound to the current policy label, and then forward the request to the specified virtual server or evaluate the specified policy label.
labeltype	<String>	Read-write	Type of invocation. Available settings function as follows: * reqvserver - Forward the request to the specified request virtual server. * policylabel - Invoke the specified policy label. Possible values = reqvserver, policylabel
__count	<Double>	Read-write	count parameter

Operations

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/transformpolicylabel_transformpolicy_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{
```

```
"transformpolicylabel_transformpolicy_binding":{

<b>"labelname":<String_value>,

</b><b>"policyname":<String_value>,

</b><b>"priority":<Double_value>,

</b>"gotopriorityexpression":<String_value>,

"invoke":<Boolean_value>,

"labeltype":<String_value>,

"invoke_labelname":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicylabel_transformpolicy_binding/labelname_value<String>

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicylabel_transformpolicy_binding/labelname_value<String>?**args=policyname:<String_value>,priority:<Double_value>**

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicylabel_transformpolicy_binding/labelname_value<String>

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicylabel_transformpolicy_binding/labelname_value<String>?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of transformpolicylabel_transformpolicy_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicylabel_transformpolicy_binding/labelname_value<String>?**pagesize=#no;pageno=#no**

Use this query-parameter to get the transformpolicylabel_transformpolicy_binding resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicy_transformpolicylabel_binding/name_value<String>

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicy_transformpolicylabel_binding/name_value<String>?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of transformpolicy_transformpolicylabel_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicy_transformpolicylabel_binding/name_value<String>?**pagesize=#no;pageno=#no**

Use this query-parameter to get the transformpolicy_transformpolicylabel_binding resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "transformpolicy_transformpolicylabel_binding": [ {

"name":<String_value>,

"boundto":<String_value>,

"priority":<Double_value>,

"gotopriorityexpression":<String_value>,

"labeltype":<String_value>,

"activepolicy":<Integer_value>,

"labelname":<String_value>

}]}
```

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicy_transformpolicylabel_binding

Query-parameters:

bulkbindings

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicy_transformpolicylabel_binding?**bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "transformpolicy_transformpolicylabel_binding": [ {

"name":<String_value>,

"boundto":<String_value>,

"priority":<Double_value>,

"gotopriorityexpression":<String_value>,

"labeltype":<String_value>,
```

```
"activepolicy":<Integer_value>,

"labelname":<String_value>

}]}
```

count

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/transformpolicy_transformpolicylabel_binding/name_value<String>?**count=yes**

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{"transformpolicy_transformpolicylabel_binding": [ { "__count": "#no"} ] }
```

transformprofile

Configuration for URL Transformation profile resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the URL transformation profile. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after the URL transformation profile is added. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, ?my transform profile? or ?my transform profile?). Minimum length = 1
type	<String>	Read-write	Type of transformation. Always URL for URL

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Transformation profiles. Possible values = URL
onlytransformabsurlinbody	<String>	Read-write	In the HTTP body, transform only absolute URLs. Relative URLs are ignored. Possible values = ON, OFF
comment	<String>	Read-write	Any comments to preserve information about this URL Transformation profile.
regexforfindingurlinjavascript	<String>	Read-only	Patclass having regexes to find the URLs in JavaScript.
regexforfindingurlincss	<String>	Read-only	Patclass having regexes to find the URLs in CSS.
regexforfindingurlinxcomponent	<String>	Read-only	Patclass having regexes to find the URLs in X-Component.
regexforfindingurlinxml	<String>	Read-only	Patclass having regexes to find the URLs in XML.
additionalreqheaderslist	<String>	Read-only	Patclass having a list of additional request header names that should transformed.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
additionalrespheaderslist	<String>	Read-only	Patclass having a list of additional response header names that should transformed.
__count	<Double>	Read-only	count parameter

tunneltrafficpolicy

Configuration for tunnel policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the tunnel traffic policy. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters. Cannot be changed after

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the policy is created. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my policy" or 'my policy)'. Minimum length = 1
rule	<String>	Read-write	Expression, against which traffic is evaluated. The following requirements apply only to the Citrix ADC CLI: * If the expression includes blank spaces, the entire expression must be enclosed in double quotation marks. * If the expression itself includes double quotation marks, you must

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			escape the quotations by using the \ character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks.
action	<String>	Read-write	Name of the built-in compression action to associate with the policy. Minimum length = 1
comment	<String>	Read-write	Any comments to preserve information about this policy.
logaction	<String>	Read-write	Name of the messagelog action to use for requests that match this policy.
newname	<String>	Read-write	New name for the tunnel traffic policy. Must begin with an ASCII alphabetic or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), e

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			quals (=), and hyphen (-) characters. Choose a name that reflects the function that the policy performs. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my tunnel policy" or 'my tunnel policy'). Minimum length = 1
expressiontype	<String>	Read-only	Type of policy (Classic/Advanced). Possible values = Classic Policy, Advanced Policy
hits	<Double>	Read-only	No of hits.
undefhits	<Double>	Read-only	Number of policy UNDEF hits.
txbytes	<Double>	Read-only	Number of bytes transmitted.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
rxbytes	<Double>	Read-only	Number of bytes received.
clientttlb	<Double>	Read-only	Total client TTLB value.
clienttransactions	<Double>	Read-only	Number of client transactions.
serverttlb	<Double>	Read-only	Total server TTLB value.
servertransactions	<Double>	Read-only	Number of server transactions.
isdefault	<Boolean>	Read-only	A value of true is returned if it is a default tunnelpolicy.
__count	<Double>	Read-only	count parameter

Operations

ADD| DELETE| UPDATE| UNSET| RENAME| GET (ALL)| GET| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/tunneltrafficpolicy

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/ulfdserver/loggerip_value<String>?**view=summary**

Note: By default, the retrieved results are displayed in detail view (?view=detail).

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "ulfdserver": [ {

"loggerip":<String_value>,

"state":<String_value>

}]}
```

count

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/ulfdserver?**count=yes**

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "ulfdserver": [ { "__count": "#no"} ] }
```

URL Filtering

Urlfiltering

URL Filtering feature is used control access to webpages based on category.

NAME	DESCRIPTION
urlfilteringcategories	Configuration for Categories
urlfilteringcategorization	Configuration for Categorization
urlfilteringcategorygroups	Configuration for Category Groups
urlfilteringparameter	Configuration for URLFILTERING paramter

urlfilteringcategories

Configuration for Categories resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
group	<String>	Read-write	URL Filtering SDK Category per Group. Minimum length = 1
categories	<String>	Read-only	URL Filtering SDK Categories. Minimum length = 1

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/urlfilteringcategories

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/urlfilteringcategories?
args=group:<String_value>

Use this query-parameter to get urlfilteringcategories resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "urlfilteringcategories": [ {

group:<String_value>"categories":<String_value>

}]}
```

urlfilteringcategorygroups

Configuration for Category Groups resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
categorygroups	<String>	Read-only	URL Filtering SDK Category Groups. Minimum length = 1

Operations

(click to see Properties)

```

uservserver

Configuration for virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the virtual server. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my vserver" or 'my vserver'). . Minimum length = 1
userprotocol	<String>	Read-write	User protocol uesd by the service.
ipaddress	<String>	Read-write	IPv4 or IPv6 address to assign to the virtual server.
port	<Integer>	Read-write	Port number for the virtual server. Range 1 - 65535 * in CLI is represented as

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			65535 in NITRO API
defaultlb	<String>	Read-write	Name of the default Load Balancing virtual server used for load balancing of services. The protocol type of default Load Balancing virtual server should be a user type.
Params	<String>	Read-write	Any comments associated with the protocol.
comment	<String>	Read-write	Any comments that you might want to associate with the virtual server.
state	<String>	Read-write	Initial state of the user vserver. Default value: ENABLED Possible values = ENABLED, DISABLED
curstate	<String>	Read-only	Current user vserver state. Possible values = UP, DOWN, UNKNOWN, BUSY, OUT OF SERVICE, GOING OUT OF SERVICE, DOWN

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			WHEN GOING OUT OF SERVICE, NS_EMPTY_STR, Unknown, DISABLED
value	<String>	Read-only	SSL status. Possible values = Certkey not bound, SSL feature disabled
statechangetimesec	<String>	Read-only	Time when last state change happened. Seconds part.
statechangetimemsec	<Double>	Read-only	Time at which last state change happened. Milliseconds part.
tickssincelaststatechange	<Double>	Read-only	Time in 10 millisecond ticks since the last state change.
nodefaultbindings	<String>	Read-only	to determine if the configuration will have default ssl CIPHER and ECC curve bindings. Default value: NO Possible values = YES, NO
__count	<Double>	Read-only	count parameter

NAME	DESCRIPTION
callhome	Configuration for callhome
install	
ping	
ping6	
raid	Configuration for raid support
techsupport	Configuration for tech support
traceroute	
traceroute6	

callhome

Configuration for callhome resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
nodeid	<Double>	Read-write	Unique number that identifies the cluster node. Minimum value = 0 Maximum value = 31
mode	<String>	Read-write	CallHome mode of operation. Default value: Default Possible values = Default, CSP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
emailaddress	<String>	Read-write	Email address of the contact administrator. Maximum length = 78
hbcustominterval	<Double>	Read-write	Interval (in days) between CallHome heartbeats. Default value: 7 Minimum value = 1 Maximum value = 30
proxymode	<String>	Read-write	Enables or disables the proxy mode. The proxy server can be set by either specifying the IP address of the server or the name of the service representing the proxy server. Default value: NO Possible values = YES, NO
ipaddress	<String>	Read-write	IP address of the proxy server. Minimum length = 1
proxyauthservice	<String>	Read-write	Name of the service that represents the proxy server. Maximum length = 128

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
port	<Integer>	Read-write	HTTP port on the Proxy server. This is a mandatory parameter for both IP address and service name based configuration. Minimum value = 1 Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
sslcardfirstfailure	<String>	Read-only	First occurrence SSL card failure.
sslcardlatestfailure	<String>	Read-only	Latest occurrence SSL card failure.
powfirstfail	<String>	Read-only	First occurrence power supply unit failure.
powlatestfailure	<String>	Read-only	Latest occurrence power supply unit failure.
hddfirstfail	<String>	Read-only	First occurrence hard disk drive failure.
hddlatestfailure	<String>	Read-only	Latest occurrence hard disk drive failure.
flashfirstfail	<String>	Read-only	First occurrence compact flash failure.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
flashlatestfailure	<String>	Read-only	Latest occurrence compact flush failure.
rlfirsthighdrop	<String>	Read-only	First occurence of high rate limit drops.
rllatesthighdrop	<String>	Read-only	Latest occurence of high rate limit drops.
restartlatestfail	<String>	Read-only	Latest occurrence warm restart failure.
memthrefirstanomaly	<String>	Read-only	First occurrence of memory anomaly.
memthrelatestanomaly	<String>	Read-only	Latest occurrence of memory anomaly.
callhomestatus	<String[]>	Read-only	Callhome feature enabled/disable, register with upload server successful/ failed. Possible values = ENABLED, DISABLED, SUCCESSFUL, FAILED, INVALID HOSTNAME, NO DNSSERVER, HOSTNAME RESOLUTION FAILED

Operations

(click to see Properties)

UPDATE| UNSET| GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

update

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/callhome

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"callhome":{

"mode":<String_value>,

"emailaddress":<String_value>,

"hbcustominterval":<Double_value>,

"proxymode":<String_value>,

"ipaddress":<String_value>,

"proxyauthservice":<String_value>,

"port":<Integer_value>

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

unset

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/callhome?**action=unset**

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"callhome":{
```

```
"mode":true,

"emailaddress":true,

"hbcustominterval":true,

"proxymode":true,

"ipaddress":true,

"proxyauthservice":true,

"port":true

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/callhome

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/callhome?**args=nodeid:<Double_value>**

Use this query-parameter to get callhome resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

INSTALL

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

Install

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/install

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"install":{

<b>"url":<String_value>,

</b>"y":<Boolean_value>,

"l":<Boolean_value>,
```

```
"enhancedupgrade":<Boolean_value>,

"resizeswapvar":<Boolean_value>

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

ping

Configuration for 0 resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
c	<Double>	Read-write	Number of packets to send. The default value is infinite. For Nitro API, defalut value is taken as 5. Minimum value = 1 Maximum value = 65535
i	<Double>	Read-write	Waiting time, in seconds. The default value is 1 second. Minimum value = 0 Maximum value = 65535

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
I	<String>	Read-write	Network interface on which to ping, if you have multiple interfaces. Minimum length = 1 Maximum length = 15
n	<Boolean>	Read-write	Numeric output only. No name resolution.
p	<String>	Read-write	Pattern to fill in packets. Can be up to 16 bytes, useful for diagnosing data-dependent problems. Minimum length = 1 Maximum length = 32
q	<Boolean>	Read-write	Quiet output. Only the summary is printed. For Nitro API, this flag is set by default.
s	<Double>	Read-write	Data size, in bytes. The default value is 56. Minimum value = 0 Maximum value = 65507
S	<String>	Read-write	Source IP address to be used in the outgoing query packets. If the IP addrESS does not

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			belongs to this appliance, an error is returned and nothing is sent. Minimum length = 1
T	<Double>	Read-write	Traffic Domain Id. Minimum value = 1 Maximum value = 4094
t	<Double>	Read-write	Time-out, in seconds, before ping exits. Minimum value = 1 Maximum value = 3600
hostName	<String>	Read-write	Address of host to ping. Minimum length = 1 Maximum length = 256
response	<String>	Read-only	.

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

Ping

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/ping

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"ping":{

"c":<Double_value>,

"i":<Double_value>,

"I":<String_value>,
```

```
"n":<Boolean_value>,

"p":<String_value>,

"q":<Boolean_value>,

"s":<Double_value>,

"S":<String_value>,

"T":<Double_value>,

"t":<Double_value>,

<b>"hostName":<String_value>

</b>}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Payload:**

```
{ "ping": [ {

"response":<String_value>

}]}
```

ping6

Configuration for 0 resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
b	<Double>	Read-write	Set socket buffer size. If used, should be used with roughly +100 then the datalen (-s option). The default value is 8192. Minimum value = 132 Maximum value = 131071
c	<Double>	Read-write	Number of packets to send. The default value is infinite. For Nitro API, defalut value is taken as 5. Minimum value = 1 Maximum value = 65535
i	<Double>	Read-write	Waiting time, in seconds. The default value is 1 second. Minimum value = 0 Maximum value = 65535
I	<String>	Read-write	Network interface on which to ping, if you have multiple interfaces. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Maximum length = 15
m	<Boolean>	Read-write	By default, ping6 asks the kernel to fragment packets to fit into the minimum IPv6 MTU.The -m option will suppress the behavior for unicast packets.
n	<Boolean>	Read-write	Numeric output only. No name resolution.
p	<String>	Read-write	Pattern to fill in packets. Can be up to 16 bytes, useful for diagnosing data-dependent problems. Minimum length = 1 Maximum length = 32
q	<Boolean>	Read-write	Quiet output. Only summary is printed. For Nitro API, this flag is set by default.
s	<Double>	Read-write	Data size, in bytes. The default value is 32. Minimum value = 0 Maximum value = 65527
V	<Double>	Read-write	VLAN ID for link local address.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 1 Maximum value = 4094
S	<String>	Read-write	Source IP address to be used in the outgoing query packets. Minimum length = 1
T	<Double>	Read-write	Traffic Domain Id. Minimum value = 1 Maximum value = 4094
t	<Double>	Read-write	Timeout in seconds before ping6 exits.
hostName	<String>	Read-write	Address of host to ping. Minimum length = 1 Maximum length = 256
response	<String>	Read-only	.

```

techsupport

Configuration for tech support resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
scope	<String>	Read-write	Use this option to gather data on the present node, all cluster nodes, or for the specified partitions. The CLUSTER scope generates smaller abbreviated archives

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			for all nodes. The PARTITION scope collects the admin partition in addition to those specified. The partitionName option is only required for the PARTITION scope. Default value: NODE Possible values = NODE, CLUSTER, PARTITION
partitionname	<String>	Read-write	Name of the partition. Minimum length = 1
upload	<Boolean>	Read-write	Securely upload the collector archive to Citrix Technical Support using SSL. MyCitrix credentials will be required. If used with the -file option, no new collector archive is generated. Instead, the specified archive is uploaded. Note that the upload operation time depends on the size of the archive file, and the connection bandwidth.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
proxy	<String>	Read-write	Specifies the proxy server to be used when uploading a collector archive. Use this parameter if the Citrix ADC does not have direct internet connectivity. The basic format of the proxy string is: "proxy_IP:<proxy_port>" (without quotes). If the proxy requires authentication the format is: "username:password@proxy_IP:<proxy_port>".
casenumber	<String>	Read-write	Specifies the associated case or service request number if it has already been opened with Citrix Technical Support.
file	<String>	Read-write	Specifies the name (with full path) of the collector archive file to be uploaded. If this is specified, no new collector archive is generated.
description	<String>	Read-write	Provides a text description for the the upload, and can be used for logging purposes.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
username	<String>	Read-write	Specifies My Citrix user name, which is used to login to Citrix upload server.
password	<String>	Read-write	Specifies My Citrix password, which is used to login to Citrix upload server.
response	<String>	Read-only	Output as text printed to console and syslog at NOTICE level.
servername	<String>	Read-only	.

Operations

```

traceroute

Configuration for 0 resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
S	<Boolean>	Read-write	Print a summary of how many probes were not answered for each hop.
n	<Boolean>	Read-write	Print hop addresses numerically instead of symbolically and numerically.
r	<Boolean>	Read-write	Bypass normal routing tables and send directly to a host on an attached network. If the host is not on a directly attached network, an error is returned.
v	<Boolean>	Read-write	Verbose output. List received ICMP packets other than TIME_EXCEEDED

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			and UNREACHABLE.
M	<Double>	Read-write	Minimum TTL value used in outgoing probe packets. Default value: 1 Minimum value = 1 Maximum value = 255
m	<Integer>	Read-write	Maximum TTL value used in outgoing probe packets. For Nitro API, default value is taken as 10. Default value: 64 Minimum value = 1 Maximum value = 255
P	<String>	Read-write	Send packets of specified IP protocol. The currently supported protocols are UDP and ICMP. Minimum length = 1 Maximum length = 20
p	<Integer>	Read-write	Base port number used in probes. Default value: 33434

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 1 Maximum value = 65535
q	<Integer>	Read-write	Number of queries per hop. For Nitro API, defalut value is taken as 1. Default value: 3 Minimum value = 1 Maximum value = 65535
s	<String>	Read-write	Source IP address to use in the outgoing query packets. If the IP address does not belong to this appliance, an error is returned and nothing is sent. Minimum length = 1
T	<Double>	Read-write	Traffic Domain Id. Minimum value = 1 Maximum value = 4094
t	<Integer>	Read-write	Type-of-service in query packets. Minimum value = 0 Maximum value = 255
w	<Integer>	Read-write	Time (in seconds) to wait for a response

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			to a query. For Nitro API, defalut value is set to 3. Default value: 5 Minimum value = 2 Maximum value = 86399
host	<String>	Read-write	Destination host IP address or name. Minimum length = 1 Maximum length = 64
packetlen	<Integer>	Read-write	Length (in bytes) of the query packets. Default value: 44 Minimum value = 44 Maximum value = 32768
response	<String>	Read-only	.

Operations

<b>"host":<String_value>,

</b>"packetlen":<Integer_value>

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Payload:**

```
{ "traceroute": [ {

"response":<String_value>

}]}
```

traceroute6

Configuration for 0 resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
n	<Boolean>	Read-write	Print hop addresses numerically rather than symbolically and numerically.
I	<Boolean>	Read-write	Use ICMP ECHO for probes.
r	<Boolean>	Read-write	Bypass normal routing tables and send directly to a host on an attached network. If the host is not on a directly attached network, an error is returned.
v	<Boolean>	Read-write	Verbose output. List received ICMP packets other than TIME_EXCEEDED and UNREACHABLE.
m	<Integer>	Read-write	Maximum hop value for outgoing probe packets. For Nitro API, default value is taken as 10. Default value: 64

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum value = 1 Maximum value = 255
p	<Integer>	Read-write	Base port number used in probes. Default value: 33434 Minimum value = 1 Maximum value = 65535
q	<Integer>	Read-write	Number of probes per hop. For Nitro API, default value is taken as 1. Default value: 3 Minimum value = 1 Maximum value = 65535
s	<String>	Read-write	Source IP address to use in the outgoing query packets. If the IP address does not belong to this appliance, an error is returned and nothing is sent. Minimum length = 1
T	<Double>	Read-write	Traffic Domain Id. Minimum value = 1 Maximum value = 4094

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
w	<Integer>	Read-write	Time (in seconds) to wait for a response to a query. For Nitro API, defalut value is set to 3. Default value: 5 Minimum value = 2 Maximum value = 86399
host	<String>	Read-write	Destination host IP address or name. Minimum length = 1 Maximum length = 256
packetlen	<Integer>	Read-write	Length (in bytes) of the query packets. Default value: 44 Minimum value = 44 Maximum value = 32768
response	<String>	Read-only	.

Operations

(click to see Properties)

TRACEROUTE6

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

Traceroute6

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/traceroute6

HTTP Method:POST

Request Headers:

videooptimizationdetectionpolicy

Configuration for videooptimization detectionpolicy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the videooptimization detection policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters.Can be

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			modified, removed or renamed.
rule	<String>	Read-write	Expression that determines which request or response match the video optimization detection policy. The following requirements apply only to the Citrix ADC CLI: * If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation marks, escape the quotations by using the \ character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
action	<String>	Read-write	Name of the videooptimization detection action to perform if the request matches this videooptimization detection policy. Built-in actions should be used. These are: * DETECT_CLEARTEXT_PD - Cleartext PD is detected and increment related counters. * DETECT_CLEARTEXT_ABR - Cleartext ABR is detected and increment related counters. * DETECT_ENCRYPTED_ABR - Encrypted ABR is detected and increment related counters. * TRIGGER_ENC_ABR_DETECTION - This is potentially encrypted ABR.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Internal traffic heuristics algorithms will further process traffic to confirm detection. * TRIGGER_CT_ABR_BODY_DETECTION - This is potentially cleartext ABR. Internal traffic heuristics algorithms will further process traffic to confirm detection. * RESET - Reset the client connection by closing it. * DROP - Drop the connection without sending a response.
undefaction	<String>	Read-write	Action to perform if the result of policy evaluation is undefined (UNDEF). An UNDEF event indicates an internal error condition. Only the above built-in actions can be used.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
comment	<String>	Read-write	Any type of information about this videooptimization detection policy.
logaction	<String>	Read-write	Name of the messagelog action to use for requests that match this policy.
newname	<String>	Read-write	New name for the videooptimization detection policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Minimum length = 1
hits	<Double>	Read-only	Number of hits.
undefhits	<Double>	Read-only	Number of policy UNDEF hits.
__count	<Double>	Read-only	count parameter

videooptimizationdetectionpolicy_binding

Binding object which returns the resources bound to videooptimizationdetectionpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the videooptimization detection policy for which to display settings.Must provide policy name.
videooptimizationdetectionpolicy_lbvserver_binding	<videooptimizationdetectionpolicy_lbvserver_binding[]>	Read-only	lbvserver that can be bound to videooptimizationdetectionpolicy.
videooptimizationdetectionpolicy_videooptimizationglobaldetection_binding	<videooptimizationdetectionpolicy_videooptimizationglobaldetection_binding[]>	Read-only	videooptimizationglobaldetection that can be bound to videooptimizationdetectionpolicy.

Operations

(click to see Properties)

GET| GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationdetectionpolicy_binding/name_value<String>

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "videooptimizationdetectionpolicy_binding": [ {
```

```
"name":<String_value>,

"videooptimizationdetectionpolicy_videooptimizationglobaldetection_binding
":<videooptimizationdetectionpolicy_videooptimizationglobaldetection_bindi
ng[]_value>,

"videooptimizationdetectionpolicy_lbvserver_binding":<videooptimizationdet
ectionpolicy_lbvserver_binding[]_value>

}]}
```

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationdetectionpolicy_binding

Query-parameters:

bulkbindings

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationdetectionpolicy_binding?**bulkbindings=yes**

NITRO allows you to fetch bindings in bulk.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "videooptimizationdetectionpolicy_binding": [ {

"name":<String_value>,

"videooptimizationdetectionpolicy_videooptimizationglobaldetection_binding

ng[]_value>,

"videooptimizationdetectionpolicy_lbvserver_binding":<videooptimizationdet
ectionpolicy_lbvserver_binding[]_value>

}]}
```

videooptimizationdetectionpolicy_lbvserver_binding

Binding object showing the lbvserver that can be bound to videooptimizationdetectionpolicy.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
boundto	<String>	Read-write	Location where policy is bound.
name	<String>	Read-write	Name of the videooptimization detection policy for which to display settings.Must provide policy name.
priority	<Double>	Read-only	Specifies the priority of the policy.
labelname	<String>	Read-only	Name of the label to invoke if the current policy rule evaluates to TRUE.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
labeltype	<String>	Read-only	Type of policy label invocation. Possible values = vserver, policylabel
activepolicy	<Integer>	Read-only	Indicates whether policy is bound or not.
__count	<Double>	Read-only	count parameter

Operations

(click to see Properties)

GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationdetectionpolicy_lbvserver_binding/name_value<String>

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationdetectionpolicy_lbvserver_binding/name_value<String>?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of videooptimizationdetectionpolicy_lbvserver_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationdetectionpolicy_lbvserver_binding/name_value<String>?**pagesize=#no;pageno=#no**

Use this query-parameter to get the videooptimizationdetectionpolicy_lbvserver_binding resources in chunks.

HTTP Method:GET

```

videooptimizationdetectionpolicylabel

Configuration for videooptimization detection policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name for the Video optimization detection policy label. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Cannot be changed after the videooptimization detection policy label is added. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my videooptimization detection policy label" or my videooptimization detection policy label').
policylabeltype	<String>	Read-write	Type of responses sent by the policies bound to this policy label. Types are: * HTTP - HTTP responses.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* OTHERTCP - NON-HTTP TCP responses. Default value: NS_PLTMAP_RSP _REQ Possible values = videoopt_req, videoopt_res
comment	<String>	Read-write	Any comments to preserve information about this videooptimization detection policy label.
newname	<String>	Read-write	New name for the videooptimization detection policy label. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Minimum length = 1
numpol	<Double>	Read-only	number of polices bound to label.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
hits	<Double>	Read-only	Number of times policy label was invoked.
priority	<Double>	Read-only	Specifies the priority of the policy.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
labeltype	<String>	Read-only	Type of policy label to invoke. Available settings function as follows: * vserver - Invoke an unnamed policy label associated with a virtual server. * policylabel - Invoke a user-defined policy label. Possible values = vserver, policylabel
invoke_labelname	<String>	Read-only	* If labelType is policylabel, name of the policy label to invoke. * If labelType is reqvserver or resvserver, name of the virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
__count	<Double>	Read-only	count parameter

```

videooptimizationglobalpacing_videooptimizationpacingpolicy_binding

Binding object showing the videooptimizationpacingpolicy that can be bound to videooptimizationglobalpacing.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-write	Specifies the priority of the policy.
globalbindtype	<String>	Read-write	. Default value: SYSTEM_GLOBAL Possible values = SYSTEM_GLOBAL, VPN_GLOBAL, RNAT_GLOBAL
policyname	<String>	Read-write	Name of the videooptimization pacing policy.
labelname	<String>	Read-write	Name of the policy label to invoke. If the current policy evaluates to TRUE, the invoke parameter is set, and Label Type is policylabel.
gotopriorityexpression	<String>	Read-write	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
invoke	<Boolean>	Read-write	If the current policy evaluates to TRUE, terminate evaluation of policies bound to the current policy label, and then forward the request to the specified virtual server or evaluate the specified policy label.
type	<String>	Read-write	Specifies the bind point whose policies you want to display. Possible values = REQ_OVERRIDE, REQ_DEFAULT, RES_OVERRIDE, RES_DEFAULT
labeltype	<String>	Read-write	Type of invocation, Available settings function as follows: * vserver - Forward the request to the specified virtual server. * policylabel - Invoke the specified policy label. Possible values = vserver, policylabel
numpol	<Double>	Read-only	number of polices bound.
__count	<Double>	Read-only	count parameter

videooptimizationpacingpolicy

Configuration for videooptimization pacingpolicy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name for the videooptimization pacing policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) pound (#), space ( ), at (@), equals (=), colon (:), and underscore characters.Can be modified, removed or renamed.
rule	<String>	Read-write	Expression that determines which request or response match the video optimization pacing policy. The following requirements apply only to the Citrix ADC CLI:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* If the expression includes one or more spaces, enclose the entire expression in double quotation marks. * If the expression itself includes double quotation marks, escape the quotations by using the \ character. * Alternatively, you can use single quotation marks to enclose the rule, in which case you do not have to escape the double quotation marks.
action	<String>	Read-write	Name of the videooptimization pacing action to perform if the request matches this videooptimization pacing policy.
undefaction	<String>	Read-write	Action to perform if the result of policy evaluation is undefined (UNDEF). An UNDEF event indicates an internal error condition. Only

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the above built-in actions can be used.
comment	<String>	Read-write	Any type of information about this videooptimization pacing policy.
logaction	<String>	Read-write	Name of the messagelog action to use for requests that match this policy.
newname	<String>	Read-write	New name for the videooptimization pacing policy. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Minimum length = 1
hits	<Double>	Read-only	Number of hits.
undefhits	<Double>	Read-only	Number of policy UNDEF hits.
__count	<Double>	Read-only	count parameter

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicy

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"videooptimizationpacingpolicy":{

<b>"name":<String_value>,

</b><b>"rule":<String_value>,

</b><b>"action":<String_value>,

</b>"undefaction":<String_value>,

"comment":<String_value>,

"logaction":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicy/name_value<String>

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

update

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicy

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"videooptimizationpacingpolicy":{

<b>"name":<String_value>,

</b>"rule":<String_value>,

"action":<String_value>,

"undefaction":<String_value>,

"comment":<String_value>,

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

unset

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicy?**action=unset**

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"videooptimizationpacingpolicy":{

<b>"name":<String_value>,

</b>"undefaction":true,

"comment":true,

"logaction":true

}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

rename

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicy?**action=rename**

HTTP Method:POST

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{"videooptimizationpacingpolicy":{

<b>"name":<String_value>,
```

```
</b><b>"newname":<String_value>

</b>}}
```

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicy

Query-parameters:

attrs

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicy?**attrs=property-name1,property-name2**

Use this query parameter to specify the resource details that you want to retrieve.

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicy?**filter=property-name1:property-val1,property-name2:property-val2**

Use this query-parameter to get the filtered set of videooptimizationpacingpolicy resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

view

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicy?**view=summary**

Note: By default, the retrieved results are displayed in detail view (?view=detail).

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicy?**pagesize=#no;pageno=#no**

Use this query-parameter to get the videooptimizationpacingpolicy resources in chunks.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "videooptimizationpacingpolicy": [ {

videooptimizationpacingpolicylabel

Configuration for videooptimization pacing policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	Name for the Video optimization pacing policy label. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			characters. Cannot be changed after the videooptimization pacing policy label is added. The following requirement applies only to the Citrix ADC CLI: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my videooptimization pacing policy label" or my videooptimization pacing policy label').
policylabeltype	<String>	Read-write	Type of responses sent by the policies bound to this policy label. Types are: * HTTP - HTTP responses. * OTHERTCP - NON-HTTP TCP responses.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: NS_PLTMAP_RSP_REQ Possible values = videoopt_req, videoopt_res
comment	<String>	Read-write	Any comments to preserve information about this videooptimization pacing policy label.
newname	<String>	Read-write	New name for the videooptimization pacing policy label. Must begin with a letter, number, or the underscore character (_), and must contain only letters, numbers, and the hyphen (-), period (.) hash (#), space ( ), at (@), equals (=), colon (:), and underscore characters. Minimum length = 1
numpol	<Double>	Read-only	number of polices bound to label.
hits	<Double>	Read-only	Number of times policy label was invoked.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
priority	<Double>	Read-only	Specifies the priority of the policy.
gotopriorityexpression	<String>	Read-only	Expression specifying the priority of the next policy which will get evaluated if the current policy rule evaluates to TRUE.
labeltype	<String>	Read-only	Type of policy label to invoke. Available settings function as follows: * vserver - Invoke an unnamed policy label associated with a virtual server. * policylabel - Invoke a user-defined policy label. Possible values = vserver, policylabel
invoke_labelname	<String>	Read-only	* If labelType is policylabel, name of the policy label to invoke. * If labelType is reqvserver or resvserver, name of the virtual server.
__count	<Double>	Read-only	count parameter

GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:` *

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicylabel_policybinding_binding/labelname_value<String>

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicylabel_policybinding_binding/labelname_value<String>?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of videooptimizationpacingpolicylabel_policybinding_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/videooptimizationpacingpolicylabel_policybinding_binding/labelname_value<String>?**pagesize=#no;pageno=#no**

Use this query-parameter to get the videooptimizationpacingpolicylabel_policybinding_binding resources in chunks.

HTTP Method:GET

Request Headers:

```

wisite

Configuration for WI site resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sitepath	<String>	Read-write	Path to the Web Interface site being created on the Citrix ADC. Minimum length = 1 Maximum length = 250
agurl	<String>	Read-write	Call back URL of the Gateway.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1 Maximum length = 255
staurl	<String>	Read-write	URL of the Secure Ticket Authority (STA) server. Minimum length = 1 Maximum length = 255
secondstaurl	<String>	Read-write	URL of the second Secure Ticket Authority (STA) server. Minimum length = 1 Maximum length = 255
sessionreliability	<String>	Read-write	Enable session reliability through Access Gateway. Default value: OFF Possible values = ON, OFF
usetwotickets	<String>	Read-write	Request tickets issued by two separate Secure Ticket Authorities (STA) when a resource is accessed. Default value: OFF Possible values = ON, OFF

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
authenticationpoint	<String>	Read-write	Authentication point for the Web Interface site. Possible values = WebInterface, AccessGateway
agauthenticationmethod	<String>	Read-write	Method for authenticating a Web Interface site if you have specified Web Interface as the authentication point. Available settings function as follows: * Explicit - Users must provide a user name and password to log on to the Web Interface. * Anonymous - Users can log on to the Web Interface without providing a user name and password. They have access to resources published for anonymous users. Possible values = Explicit, SmartCard
wiauthenticationmethods	<String[]>	Read-write	The method of authentication to be

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			used at Web Interface. Default value: Explicit Possible values = Explicit, Anonymous
defaultcustomtextlocale	<String>	Read-write	Default language for the Web Interface site. Default value: English Possible values = German, English, Spanish, French, Japanese, Korean, Russian, Chinese_simplified, Chinese_traditional
websessiontimeout	<Double>	Read-write	Time-out, in minutes, for idle Web Interface browser sessions. If a client's session is idle for a time that exceeds the time-out value, the Citrix ADC terminates the connection. Default value: 20 Minimum value = 1 Maximum value = 1440

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
defaultaccessmethod	<String>	Read-write	Default access method for clients accessing the Web Interface site. Note: Before you configure an access method based on the client IP address, you must enable USIP mode on the Web Interface service to make the client's IP address available with the Web Interface. Depending on whether the Web Interface site is configured to use an HTTP or HTTPS virtual server or to use access gateway, you can send clients or access gateway the IP address, or the alternate address, of a XenApp or XenDesktop server. Or, you can send the IP address translated from a mapping entry, which defines

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			mapping of an internal address and port to an external address and port. Note: In the Citrix ADC command line, mapping entries can be created by using the bind wi site command. Possible values = Direct, Alternate, Translated, GatewayDirect, GatewayAlternate, GatewayTranslated
logintitle	<String>	Read-write	A custom login page title for the Web Interface site. Default value: "Welcome to Web Interface on Citrix ADC" Minimum length = 1 Maximum length = 255
appwelcomemessage	<String>	Read-write	Specifies localized text to appear at the top of the main content area of the Applications screen. LanguageCode is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			en, de, es, fr, ja, or any other supported language identifier. Minimum length = 1 Maximum length = 255
welcomemessage	<String>	Read-write	Localized welcome message that appears on the welcome area of the login screen. Minimum length = 1 Maximum length = 255
footertext	<String>	Read-write	Localized text that appears in the footer area of all pages. Minimum length = 1 Maximum length = 255
loginsysmessage	<String>	Read-write	Localized text that appears at the bottom of the main content area of the login screen. Minimum length = 1 Maximum length = 255
preloginbutton	<String>	Read-write	Localized text that appears as the name of the pre-login message confirmation button.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Minimum length = 1 Maximum length = 255
preloginmessage	<String>	Read-write	Localized text that appears on the pre-login message page. Minimum length = 1 Maximum length = 2048
prelogintitle	<String>	Read-write	Localized text that appears as the title of the pre-login message page. Minimum length = 1 Maximum length = 255
domainselection	<String>	Read-write	Domain names listed on the login screen for explicit authentication. Minimum length = 1 Maximum length = 255
sitetype	<String>	Read-write	Type of access to the Web Interface site. Available settings function as follows: * XenApp/ XenDesktop web site - Configures the Web Interface site

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			for access by a web browser. * XenApp/ XenDesktop services site - Configures the Web Interface site for access by the XenApp plug-in. Default value: XenAppWeb Possible values = XenAppWeb, XenAppServices
userinterfacebrandin g	<String>	Read-write	Specifies whether the site is focused towards users accessing applications or desktops. Setting the parameter to Desktops changes the functionality of the site to improve the experience for XenDesktop users. Citrix recommends using this setting for any deployment that includes XenDesktop. Default value: Applications

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values = Desktops, Applications
publishedresourcetype	<String>	Read-write	Method for accessing the published XenApp and XenDesktop resources. Available settings function as follows: * Online - Allows applications to be launched on the XenApp and XenDesktop servers. * Offline - Allows streaming of applications to the client. * DualMode - Allows both online and offline modes. Default value: Online Possible values = Online, Offline, DualMode
kioskmode	<String>	Read-write	User settings do not persist from one session to another.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: OFF Possible values = ON, OFF
showsearch	<String>	Read-write	Enables search option on XenApp websites. Default value: OFF Possible values = ON, OFF
showrefresh	<String>	Read-write	Provides the Refresh button on the applications screen. Default value: OFF Possible values = ON, OFF
wiuserinterfacemodes	<String>	Read-write	Appearance of the login screen. * Simple - Only the login fields for the selected authentication method are displayed. * Advanced - Displays the navigation bar, which provides access to the pre-login messages and preferences screens.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: SIMPLE Possible values = SIMPLE, ADVANCED
userinterfacelayouts	<String>	Read-write	Specifies whether or not to use the compact user interface. Default value: AUTO Possible values = AUTO, NORMAL, COMPACT
restrictdomains	<String>	Read-write	The RestrictDomains setting is used to enable/disable domain restrictions. If domain restriction is enabled, the LoginDomains list is used for validating the login domain. It is applied to all the authentication methods except Anonymous for XenApp Web and XenApp Services sites. Default value: OFF Possible values = ON, OFF

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
logindomains	<String>	Read-write	[List of NetBIOS domain names], Domain names to use for access restriction. Only takes effect when used in conjunction with the RestrictDomains setting. Minimum length = 1 Maximum length = 255
hidedomainfield	<String>	Read-write	The HideDomainField setting is used to control whether the domain field is displayed on the logon screen. Default value: OFF Possible values = ON, OFF
agcallbackurl	<String>	Read-write	Callback AGURL to which Web Interface contacts. . Minimum length = 1 Maximum length = 255
__count	<Double>	Read-only	count parameter

wisite_accessmethod_binding

Binding object showing the accessmethod that can be bound to wisite.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clientipaddress	<String>	Read-write	IPv4 or network address of the client for which you want to associate an access method. Default value: 0
clientnetmask	<String>	Read-write	Subnet mask associated with the IPv4 or network address specified by the Client IP Address parameter. Default value: 0
accessmethod	<String>	Read-write	Secure access method to be applied to the IPv4 or network address of the client specified by the Client IP Address parameter. Depending on whether the Web Interface site is configured to use an HTTP or HTTPS

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			virtual server or to use access gateway, you can send clients or access gateway the IP address, or the alternate address, of a XenApp or XenDesktop server. Or, you can send the IP address translated from a mapping entry, which defines mapping of an internal address and port to an external address and port. Possible values = Direct, Alternate, Translated, GatewayDirect, GatewayAlternate, GatewayTranslated
sitepath	<String>	Read-write	Path to the Web Interface site. Minimum length = 1 Maximum length = 250
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/wisite_accessmethod_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{
```

```
"wisite_accessmethod_binding":{

<b>"sitepath":<String_value>,

}]}
```

wisite_farmname_binding

Binding object showing the farmname that can be bound to wisite.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sitepath	<String>	Read-write	Path to the Web Interface site. Minimum length = 1 Maximum length = 250
groups	<String>	Read-write	Active Directory groups that are permitted to enumerate resources from server farms. Including a setting for this parameter activates the user roaming feature. A maximum of 512 user groups can be specified for each farm defined with the Farm<n> parameter. The groups must be comma separated.
xmlport	<Double>	Read-write	Port number at which to contact the XML service.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
transport	<String>	Read-write	Transport protocol to use for transferring data, related to the Web Interface site, between the Citrix ADC and the XML service. Possible values = HTTP, HTTPS, SSLRELAY
sslrelayport	<Double>	Read-write	TCP port at which the XenApp or XenDesktop servers listenfor SSL Relay traffic from the Citrix ADC. This parameter is required if you have set SSL Relay as the transport protocol. Web Interface uses root certificates when authenticating a server running SSL Relay. Make sure that all the servers running SSL Relay are configured to listen on the same port.
farmname	<String>	Read-write	Name for the logical representation of a XenApp or XenDesktop farm to be bound to the Web Interface site. Must begin with an ASCII alphabetic or

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at (@), equals (=), and hyphen (-) characters.
loadbalance	<String>	Read-write	Use all the XML servers (load balancing mode) or only one server (failover mode). Possible values = ON, OFF
recoveryfarm	<String>	Read-write	Binded farm is set as a recovery farm. Default value: OFF Possible values = ON, OFF
xmlserveraddresses	<String>	Read-write	Comma-separated IP addresses or host names of XenApp or XenDesktop servers providing XML services.
__count	<Double>	Read-write	count parameter

accesstype	<String>	Read-write	Type of access to the XenApp or XenDesktop server. Available settings function as follows: * User Device - Clients can use the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			translated address of the mapping entry to connect to the XenApp or XenDesktop server. * Gateway - Access Gateway can use the translated address of the mapping entry to connect to the XenApp or XenDesktop server. * User Device and Gateway - Both clients and Access Gateway can use the translated address of the mapping entry to connect to the XenApp or XenDesktop server. Default value: UserDevice Possible values = UserDevice, Gateway, UserDeviceAndGateway
translationexternalport	<Integer>	Read-write	External port number associated with the server's port number. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
translationinternalip	<String>	Read-write	IP address of the server for which you want to associate an external IP address. (Clients access the server through the associated external address and port.). Default value: 0
translationexternalip	<String>	Read-write	External IP address associated with server's IP address.
translationinternalport	<Integer>	Read-write	Port number of the server for which you want to associate an external port. (Clients access the server through the associated external address and port.). Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
__count	<Double>	Read-write	count parameter

Operations

(click to see Properties)

ADD:| DELETE:| GET| GET (ALL)| COUNT

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

add

URL:http://<Citrix-ADC-IP-address(NSIP)/nitro/v1/config/wisite_translationinternalip_binding

HTTP Method:PUT

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Content-Type:application/json

Request Payload:

```
{
```

```
"wisite_translationinternalip_binding":{

<b>"sitepath":<String_value>,

</b>"translationinternalip":<String_value>,

"translationinternalport":<Integer_value>,

"translationexternalip":<String_value>,

"translationexternalport":<Integer_value>,

"accesstype":<String_value>

}}
```

Response:

HTTP Status Code on Success: 201 Created HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

delete

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/wisite_translationinternalip_binding/sitepath_value<String>

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/wisite_translationinternalip_binding/sitepath_value<String>?
args=translationinternalip:<String_value>,translationinternalport:<Integer_value>,translationexternalip:

HTTP Method:DELETE

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/wisite_translationinternalip_binding/sitepath_value<String>

Query-parameters:

filter

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/wisite_translationinternalip_binding/sitepath_value<String>?**filter=property-name1:property-value1,property-name2:property-value2**

Use this query-parameter to get the filtered set of wisite_translationinternalip_binding resources configured on Citrix ADC. Filtering can be done on any of the properties of the resource.

pagination

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/wisite_translationinternalip_binding/sitepath_value<String>?**pagesize=#no;pageno=#no**

Use this query-parameter to get the wisite_translationinternalip_binding resources in chunks.

HTTP Method:GET

Request Headers:

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "xmpackage": [ { "__count": "#no"} ] }
```

Statistics

The statistics API is arranged in a logical groups of objects. Choose an appropriate group to find more details.

NAME	DESCRIPTION
AAA	Authentication, authorization, and accounting service statistics.
Appflow	AppFlow statistics.
Application Firewall	Application Firewall statistics.
Appqoe	Application Level Quality of Experience statistics
Audit	Audit statistics.
Authentication	Authentication statistics.
Authorization	Authorization statistics. Authorization services check which resources users are authorized to access, and grant permissions accordingly.
Autoscale	AutoScale statistics.
Basic	Basic system statistics.
Ca	Content Accelerator statistics. The Content Accelerator feature is used to cache static and dynamic web application data.
Integrated Caching	Integrated Caching statistics. The Integrated Caching feature is used to cache static and dynamic web application data.
Cluster	Cluster commands.

NAME	DESCRIPTION
Compression	Compression statistics. The systems feature for compressing HTTP responses to compression-aware browsers.
CI	Content Inspection
Cache Redirection	Cache redirection statistics. The cache redirection feature can transparently redirect cacheable HTTP requests to a cache and send non-cacheable or dynamic HTTP requests to the origin server. A cache stores or caches frequently requested web content and serves such web content to a client on behalf of the origin servers, alleviating the load on the origin server farm.
Content Switching	Content Switching statistics. Content Switching feature that enables you to direct traffic to servers on the basis of content.
Domain Name Service	Domain Name Service(DNS) statistics.
HTTP DoS Protection	HTTP DOS protection statistics.
Front-end-optimization	Front end optimization statistics. The systems feature to optimize Web content for performance.
Global Server Load Balancing	Global Server Load Balancing (GSLB) statistics. GSLB feature ensures that client requests are directed to a best performing site available in a global enterprise and distributed Internet environment.
High Availability	High-availability commands.
Ica	ICA statistics.
Ipsec	IPSEC statistics.
Ipsecalg	IPSECALG statistics.

NAME	DESCRIPTION
Load Balancing	Load Balancing statistics. The load balancing methods manage the selection of an appropriate physical server in a server farm.
LLDP	Link Layer Discovery Protocol.
Lsn	Large Scale NAT commands
Network	Networking commands.
NS	System/Global level statistics.
Pcp	Port Control Protocol statistics.
Priority Queuing	Priority Queuing statistics. Priority Queuing ensures that key customer web sites get the timely responses they need. System provides priority-based queuing, which provides different levels of service to customers.
Protocol	Protocol statistics.
Qos	QoS statistics.
Responder	Responder statistics.
Rewrite	Rewrite statistics.
Sure Connect	SureConnect statistics. SureConnect allows the system to deliver alternate content to clients when the system is under heavy load for the original URL. The original content will be served to the client, automatically, after an estimated delay period.
SNMP	SNMP(Simple Network Management Protocol) statistics.
Spillover	Spillover policies and actions.
SSL	SSL statistics

NAME	DESCRIPTION
Stream	Stream statistics.
System	System statistics.
Traffic Management	TM session/policy statistics.
Transform	URL Transformation statistics.
Tunnel	SSL VPN Tunnel statistics.
User	User protocol statistics.
VideoOptimization	Video optimization feature is used to show (i) the stats of different media types that are being served by the Citrix ADC and (ii) the details of optimization applied on ABR videos
SSL VPN	Virtual Private Network statistics.

aaa

Statistics for aaa.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
aaaauthsuccess	<Double>	Read-only	Count of authentication successes.
aaaauthsuccessrate	<Double>	Read-only	Rate (/s) counter for aaaauthsuccess

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
aaaauthfail	<Double>	Read-only	Count of authentication failures.
aaaauthfailrate	<Double>	Read-only	Rate (/s) counter for aaaauthfail
aaaauthonlyhttpsuccess	<Double>	Read-only	Count of HTTP connections that succeeded authorization.
aaaauthonlyhttpsuccessrate	<Double>	Read-only	Rate (/s) counter for aaaauthonlyhttpsuccess
aaaauthonlyhttpfail	<Double>	Read-only	Count of HTTP connections that failed authorization.
aaaauthonlyhttpfailrate	<Double>	Read-only	Rate (/s) counter for aaaauthonlyhttpfail
aaaauthnonhttpsuccess	<Double>	Read-only	Count of non HTTP connections that succeeded authorization.
aaaauthnonhttpsuccessrate	<Double>	Read-only	Rate (/s) counter for aaaauthnonhttpsuccess
aaaauthnonhttpfail	<Double>	Read-only	Count of non HTTP connections that failed authorization.
aaaauthnonhttpfailrate	<Double>	Read-only	Rate (/s) counter for aaaauthnonhttpfail

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
aaacursessions	<Double>	Read-only	Count of current SmartAccess AAA sessions.
aaacursessionsrate	<Double>	Read-only	Rate (/s) counter for aaacursessions
aaatotsessions	<Double>	Read-only	Count of all SmartAccess AAA sessions.
aaasessionsrate	<Double>	Read-only	Rate (/s) counter for aaatotsessions
aaatotsessiontimeout	<Double>	Read-only	Count of AAA sessions that have timed out.
aaasessiontimeoutrate	<Double>	Read-only	Rate (/s) counter for aaatotsessiontimeout
aaacuricasessions	<Double>	Read-only	Count of current Basic ICA only sessions.
aaacuricasessionsrate	<Double>	Read-only	Rate (/s) counter for aaacuricasessions
aaacuricaonlyconn	<Double>	Read-only	Count of current Basic ICA only connections.
aaacuricaonlyconnrate	<Double>	Read-only	Rate (/s) counter for aaacuricaonlyconn
aaacuricaconn	<Double>	Read-only	Count of current SmartAccess ICA connections.
aaacuricaconnrate	<Double>	Read-only	Rate (/s) counter for aaacuricaconn

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
aaacurtmsessions	<Double>	Read-only	Count of current AAATM sessions.
aaacurtmsessionsrate	<Double>	Read-only	Rate (/s) counter for aaacurtmsessions
aaatottmsessions	<Double>	Read-only	Count of all AAATM sessions.
aaatmsessionsrate	<Double>	Read-only	Rate (/s) counter for aaatottmsessions

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/aaa

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/aaa?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get aaa resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

appfirewallxmlxsslogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallxmlxsslogs
appfirewallxmlattachmentlogs	<Double>	Read-only	Number of XML Attachment security check log messages generated by the Application Firewall.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
appfirewallxmlattachmentlogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallxmlattachmentlogs
appfirewallxmlsoapfaultlogs	<Double>	Read-only	Number of requests generating soap:fault log messages
appfirewallxmlsoapfaultlogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallxmlsoapfaultlogs
appfirewallxmlgenlogs	<Double>	Read-only	Number of requests generating XML generic error log messages
appfirewallxmlgenlogsrate	<Double>	Read-only	Rate (/s) counter for appfirewallxmlgenlogs
appfirewallret4xx	<Double>	Read-only	Number of requests returning HTTP 4xx from the backend server
appfirewallret4xxrate	<Double>	Read-only	Rate (/s) counter for appfirewallret4xx
appfirewallret5xx	<Double>	Read-only	Number of requests returning HTTP 5xx from the backend server
appfirewallret5xxrate	<Double>	Read-only	Rate (/s) counter for appfirewallret5xx

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/appfw

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/appfw?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get appfw resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

appfirewallret5xxperprofilerate	<Double>	Read-only	Rate (/s) counter for appfirewallret5xxperprofile

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/appfwprofile

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/appfwprofile?
args=name:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>

Use this query-parameter to get appfwprofile resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

totrequestbytes	<Double>	Read-only	Total number of requests bytes that were requested through this AppQoE policy
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totrequestbytes
totresponse	<Double>	Read-only	Total number of responses received by this AppQoE policy
responserate	<Double>	Read-only	Rate (/s) counter for totresponse
totresponsebytes	<Double>	Read-only	Total number of response bytes received by this AppQoE policy
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totresponsebytes
totjssent	<Double>	Read-only	Total number of in-memory responses sent instead of expected responses through this AppQoE policy
jssentrate	<Double>	Read-only	Rate (/s) counter for totjssent
totjsbytessent	<Double>	Read-only	Total bytes of in-memory responses sent through this AppQoE policy

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
jsbytessentrate	<Double>	Read-only	Rate (/s) counter for totjsbytessent
pipolicyhits	<Double>	Read-only	Number of hits on the policy
pipolicyhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyhits

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/appqoepolicy

audit

Statistics for audit.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
auditsyslogmsgsent	<Double>	Read-only	Syslog messages sent to the syslog server(s) over UDP.
auditsyslogmsgsentrate	<Double>	Read-only	Rate (/s) counter for auditsyslogmsgsent
auditsyslogmsggen	<Double>	Read-only	Syslog messages about to be sent to the syslog server.
auditsyslogmsggenrate	<Double>	Read-only	Rate (/s) counter for auditsyslogmsggen
auditsyslogmsgsenttcp	<Double>	Read-only	Syslog messages sent to the syslog server(s) over TCP.
auditsyslogmsgsenttcprate	<Double>	Read-only	Rate (/s) counter for auditsyslogmsgsenttcp
auditnsballocfail	<Double>	Read-only	NAT allocation failed.
auditnsballocfailrate	<Double>	Read-only	Rate (/s) counter for auditnsballocfail

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
auditlog32errsyslogallocnsbfail	<Double>	Read-only	Nsb allocation failed.
auditlog32errsyslogallocnsbfailrate	<Double>	Read-only	Rate (/s) counter for auditlog32errsyslogallocnsbfail
auditmemallocfail	<Double>	Read-only	Failures in allocation of Access Gateway context structure. When an Access Gateway session is established, the Citrix ADC creates an internal context structure , which identifies the user and the IP address from which the user has logged in.
auditmemallocfailrate	<Double>	Read-only	Rate (/s) counter for auditmemallocfail
auditportallocfail	<Double>	Read-only	Number of times the Citrix ADC failed to allocate a port when sending a syslog message to the syslog server(s).
auditportallocfailrate	<Double>	Read-only	Rate (/s) counter for auditportallocfail
auditcontextnotfound	<Double>	Read-only	Failures in finding the context structure for an Access Gateway session during attempts to send session-specific audit

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			messages. During an Access Gateway session, audit messages related to the session are queued up in the auditlog buffer for transmission to the audit log server(s). If the session is killed before the messages are sent, the context structure allocated at session creation is removed. This structure is needed for sending the queued auditlog messages. If it is not found, this counter is incremented.
auditcontextnotfound rate	<Double>	Read-only	Rate (/s) counter for auditcontextnotfound
nsbchainallocfail	<Double>	Read-only	Nsb Chain allocation failed.
nsbchainallocfailrate	<Double>	Read-only	Rate (/s) counter for nsbchainallocfail
clientconnfail	<Double>	Read-only	Failures in establishment of a connection between the Citrix ADC and the auditserver tool (the Citrix ADC's custom logging tool).
clientconnfailrate	<Double>	Read-only	Rate (/s) counter for clientconnfail

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
flushcmdcnt	<Double>	Read-only	Auditlog buffer flushes. In a multiprocessor Citrix ADC, both the main processor and the co-processor can generate auditlog messages and fill up the auditlog buffers. But only the primary processor can free up the buffers by sending auditlog messages to the auditlog server(s). The number of auditlog buffers is fixed. If the co-processor detects that all the auditlog buffers are full, it issues a flush command to the main processor.
flushcmdcntrate	<Double>	Read-only	Rate (/s) counter for flushcmdcnt
systcpconnfail	<Double>	Read-only	Failures in establishment of a connection between the Citrix ADC and the syslog server.
systcpconnfailrate	<Double>	Read-only	Rate (/s) counter for systcpconnfail
logunsentlbsys	<Double>	Read-only	Total auditlog messages which are not delivered to load

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			balanced syslog servers
logunsentlbsysrate	<Double>	Read-only	Rate (/s) counter for logunsentlbsys
logsdropped	<Double>	Read-only	Total number of log messages dropped by Citrix ADC after max hold limit is reached
logsdroppedrate	<Double>	Read-only	Rate (/s) counter for logsdropped
logsdroppedtxminnsbs	<Double>	Read-only	Total number of log messages dropped by Citrix ADC when NSBQ length is less than TX min NSBs
logsdroppedtxminnsbsrate	<Double>	Read-only	Rate (/s) counter for logsdroppedtxminnsbs

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/authenticationpolicylabel?
args=labelname:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_va

Use this query-parameter to get authenticationpolicylabel resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "authenticationpolicylabel": [ {

"labelname":<String_value>,

"pipolicylabelhitsrate":<Double_value>,

"pipolicylabelhits":<Double_value>

}]}
```

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/authenticationpolicylabel/labelname_value><String>

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "authenticationpolicylabel": [ {

"labelname":<String_value>,

"pipolicylabelhitsrate":<Double_value>,

"pipolicylabelhits":<Double_value>

}]}
```

authenticationsamlidppolicy

Statistics for AAA Saml IdentityProvider (IdP) policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	The name of the SAML Identity Provider (IdP) policy for which statistics will be displayed. If not given statistics are shown for all policies. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pipolicyhits	<Double>	Read-only	Number of hits on the policy

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pipolicyhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicyhits

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/authenticationsamlidppolicy

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/authenticationsamlidppolicy?
args=name:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>

Use this query-parameter to get authenticationsamlidppolicy resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "authenticationsamlidppolicy": [ {

"name":<String_value>,

"pipolicyhitsrate":<Double_value>,

"pipolicyhits":<Double_value>

}]}
```

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/authenticationsamlidppolicy/name_value><String>

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```

authenticationvserver

Statistics for authentication virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the authentication virtual server. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes

```

Basic

Basic system statistics.

NAME	DESCRIPTION
service	Statistics for service resource.
servicegroup	Statistics for service group resource.
servicegroupmember	Statistics for service group entity resource.

service

Statistics for service resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the service. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
throughput	<Double>	Read-only	Number of bytes received or sent by this service (Mbps).
throughputrate	<Double>	Read-only	Rate (/s) counter for throughput
avgsvrttfb	<Double>	Read-only	Average TTFB between the Citrix ADC and the server. TTFB is the time interval between sending the request packet to a service and receiving the first response from the service
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
servicetype	<String>	Read-only	The service type of this service.Possible values are ADNS, DNS, MYSQL, RTSP, SSL_DIAMETER, ADNS_TCP,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			DNS_TCP, NNTP, SIP_UDP, SSL_TCP, ANY, FTP, RADIUS, SNMP, TCP, DHCPRA, HTTP, RDP, SSL, TFTP, DIAMETER, MSSQL, RPCSVR, SSL_BRIDGE, UDP
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
curclntconnections	<Double>	Read-only	Number of current client connections.
surgecount	<Double>	Read-only	Number of requests in the surge queue.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.
svrestablishedconn	<Double>	Read-only	Number of server connections in ESTABLISHED state.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
curreusepool	<Double>	Read-only	Number of requests in the idle queue/ reuse pool.
maxclients	<Double>	Read-only	Maximum open connections allowed on this service.
curload	<Double>	Read-only	Load on the service that is calculated from the bound load based monitor.
totalconnreassembly queue75	<Double>	Read-only	Total no of connections with 75% TCP reassembly queue
totalconnreassembly queueflush	<Double>	Read-only	Total no of connections incurred TCP reassembly queue flush
curtflags	<Double>	Read-only	Current flags on the service for internal use in display handlers.
totsvrttlbtransactions	<Double>	Read-only	Total transactions where server TTLB is calculated.
toleratingttlbtransactions	<Double>	Read-only	Tolerable transactions based on APDEX threshold (>T ;; <4T).
frustratingttlbtransactions	<Double>	Read-only	Frustrating transactions based on APDEX threshold (>4T).

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
vsvrservicehits	<Double>	Read-only	Number of times that the service has been provided.
vsvrservicehitsrate	<Double>	Read-only	Rate (/s) counter for vsvrservicehits
activetransactions	<Double>	Read-only	Number of active transactions handled by this service. (Including those in the surge queue.) Active Transaction means number of transactions currently served by the server including those waiting in the SurgeQ

"servicetype":<String_value>,

"state":<String_value>

}]}
```

servicegroupmember

Statistics for service group entity resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicegroupname	<String>	Read-write	Displays statistics for the specified service group.Name of the service group. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-) characters. CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my servicegroup" or 'my servicegroup'). Minimum length = 1
ip	<String>	Read-write	IP address of the service group. Mutually exclusive with the server name parameter.
servername	<String>	Read-write	Name of the server. Mutually exclusive with the IP address parameter. Minimum length = 1
port	<Integer>	Read-write	Port number of the service group member. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
avgsvrttfb	<Double>	Read-only	Average TTFB between the Citrix ADC and the server. TTFB is the time interval between sending the request packet to a service and receiving the first response from the service
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
servicetype	<String>	Read-only	The service type of this service.Possible values are ADNS, DNS, MYSQL, RTSP, SSL_DIAMETER, ADNS_TCP, DNS_TCP, NNTP, SIP_UDP, SSL_TCP, ANY, FTP, RADIUS, SNMP, TCP, DHCPRA, HTTP, RDP, SSL, TFTP, DIAMETER, MSSQL, RPCSVR, SSL_BRIDGE, UDP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
curclntconnections	<Double>	Read-only	Number of current client connections.
surgecount	<Double>	Read-only	Number of requests in the surge queue.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.
svrestablishedconn	<Double>	Read-only	Number of server connections in ESTABLISHED state.
curreusepool	<Double>	Read-only	Number of requests in the idle queue/ reuse pool.
maxclients	<Double>	Read-only	Maximum open connections allowed on this service.
totalconnreassembly queue75	<Double>	Read-only	Total no of connections with 75% TCP reassembly queue

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalconnreassemblyqueueflush	<Double>	Read-only	Total no of connections incurred TCP reassembly queue flush
totsvrttlbtransactions	<Double>	Read-only	Total transactions where server TTLB is calculated.
toleratingttlbtransactions	<Double>	Read-only	Tolerable transactions based on APDEX threshold (>T ;; <4T).
frustratingttlbtransactions	<Double>	Read-only	Frustrating transactions based on APDEX threshold (>4T).

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/servicegroupmember

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/servicegroupmember?
args=servicegroupname:<String_value>,ip:<String_value>,servername:<String_value>,port:<Integer_va

Use this query-parameter to get servicegroupmember resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/ca

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/ca?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get ca resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Cache Redirection

Cache redirection statistics. The cache redirection feature can transparently redirect cacheable HTTP requests to a cache and send non-cacheable or dynamic HTTP requests to the origin server. A cache stores or caches frequently requested web content and serves such web content to a client on behalf of the origin servers, alleviating the load on the origin server farm.

NAME	DESCRIPTION
crvserver	Statistics for CR virtual server resource.

crvserver

Statistics for CR virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of a specific cache redirection virtual server. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
primaryipaddress	<String>	Read-only	The IP address on which the service is running.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
tothits	<Double>	Read-only	Total vserver hits
hitsrate	<Double>	Read-only	Rate (/s) counter for tothits
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
totalpktsrecvd	<Double>	Read-only	Total number of packets received by this service or virtual server.
pktsrecvdrate	<Double>	Read-only	Rate (/s) counter for totalpktsrecvd
totalpktssent	<Double>	Read-only	Total number of packets sent.
pktssentrate	<Double>	Read-only	Rate (/s) counter for totalpktssent
invalidrequestrespon se	<Double>	Read-only	Number invalid requests/responses on this vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
invalidrequestrespon sedropped	<Double>	Read-only	Number invalid requests/responses dropped on this vserver

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/clusternode

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/clusternode?
args=nodeid:<Double_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_valu

Use this query-parameter to get clusternode resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

Compression

Compression statistics. The system's feature for compressing HTTP responses to compression-aware browsers.

NAME	DESCRIPTION
cmp	Statistics for cmp.
cmppolicy	Statistics for compression policy resource.
cmppolicylabel	Statistics for compression policy label resource.

cmp

Statistics for cmp.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
delbwsaving	<Double>	Read-only	Bandwidth saving from delta compression expressed as percentage.
delcmpratio	<Double>	Read-only	Ratio of compressible data received to compressed data transmitted.If this ratio is one (uncmp:1.0) that means compression is disabled or we are not able to compress even a single compressible packet.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
decomptcpratio	<Double>	Read-only	Ratio of decompressed data transmitted to compressed data received.
decomptcpbandwidthsaving	<Double>	Read-only	Bandwidth saving from TCP compression expressed as percentage.
comptcpratio	<Double>	Read-only	Ratio of compressible data received to compressed data transmitted.If this ratio is one (uncmp:1.0) that means compression is disabled or we are not able to compress even a single compressible packet.
comptcpbandwidthsaving	<Double>	Read-only	Bandwidth saving from TCP compression expressed as percentage.
comptotaldatacompressionratio	<Double>	Read-only	Ratio of total HTTP data received to total HTTP data transmitted.
comphttpbandwidthsaving	<Double>	Read-only	Bandwidth saving from TCP compression expressed as percentage.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
compratio	<Double>	Read-only	Ratio of the compressible data received from the server to the compressed data sent to the client.
comptotalrequests	<Double>	Read-only	Number of HTTP compression requests the Citrix ADC receives for which the response is successfully compressed. For example, after you enable compression and configure services, if you send HTTP requests to the Citrix ADC using a HTTP client that supports compression, and Citrix ADC compresses the corresponding response, this counter is incremented.
comprequestsrate	<Double>	Read-only	Rate (/s) counter for comptotalrequests
comptotalrxbytes	<Double>	Read-only	Number of bytes that can be compressed, which the Citrix ADC receives from the server. This gives the content length of the response that the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Citrix ADC receives from server.
comprxbytesrate	<Double>	Read-only	Rate (/s) counter for comptotalrxbytes
comptotaltxbytes	<Double>	Read-only	Number of bytes the Citrix ADC sends to the client after compressing the response from the server.
comptxbytesrate	<Double>	Read-only	Rate (/s) counter for comptotaltxbytes
comptotalrxpackets	<Double>	Read-only	Number of HTTP packets that can be compressed, which the Citrix ADC receives from the server.
comprxpacketsrate	<Double>	Read-only	Rate (/s) counter for comptotalrxpackets
comptotaltxpackets	<Double>	Read-only	Number of HTTP packets that the Citrix ADC sends to the client after compressing the response from the server.
comptxpacketsrate	<Double>	Read-only	Rate (/s) counter for comptotaltxpackets
comptcptotalrxbytes	<Double>	Read-only	Number of bytes that can be compressed, which the Citrix ADC receives from the server. This gives the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			content length of the response that the Citrix ADC receives from server.
comptcprxbytesrate	<Double>	Read-only	Rate (/s) counter for comptcptotalrxbytes
comptcptotalrxpackets	<Double>	Read-only	Total number of compressible packets received by Citrix ADC.
comptcprxpacketsrate	<Double>	Read-only	Rate (/s) counter for comptcptotalrxpackets
comptcptotaltxbytes	<Double>	Read-only	Number of bytes that the Citrix ADC sends to the client after compressing the response from the server.
comptcptxbytesrate	<Double>	Read-only	Rate (/s) counter for comptcptotaltxbytes
comptcptotaltxpackets	<Double>	Read-only	Number of TCP packets that the Citrix ADC sends to the client after compressing the response from the server.
comptcptxpacketsrate	<Double>	Read-only	Rate (/s) counter for comptcptotaltxpackets
comptcptotalquantum	<Double>	Read-only	Number of times the Citrix ADC compresses a

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			quantum of data. Citrix ADC buffers the data received from the server till it reaches the quantum size and then compresses the buffered data and transmits to the client.
comptcpquantumrate	<Double>	Read-only	Rate (/s) counter for comptcptotalquantum
comptcptotalpush	<Double>	Read-only	Number of times the Citrix ADC compresses data on receiving a TCP PUSH flag from the server. The PUSH flag ensures that data is compressed immediately without waiting for the buffered data size to reach the quantum size.
comptcppushrate	<Double>	Read-only	Rate (/s) counter for comptcptotalpush
comptcptotaleoi	<Double>	Read-only	Number of times the Citrix ADC compresses data on receiving End Of Input (FIN packet). When the Citrix ADC receives End Of Input (FIN packet), it compresses the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			buffered data immediately without waiting for the buffered data size to reach the quantum size.
comptcpeoirate	<Double>	Read-only	Rate (/s) counter for comptcptotaleoi
comptcptotaltimer	<Double>	Read-only	Number of times the Citrix ADC compresses data on expiration of data accumulation timer. The timer expires if the server response is very slow and consequently, the Citrix ADC does not receive response for a certain amount of time. Under such a condition, the Citrix ADC compresses the buffered data immediately without waiting for the buffered data size to reach the quantum size.
comptcptimerrate	<Double>	Read-only	Rate (/s) counter for comptcptotaltimer
decomptcprxbytes	<Double>	Read-only	Total number of compressed bytes received by Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
decomptcprxbytesrate	<Double>	Read-only	Rate (/s) counter for decomptcprxbytes
decomptcprxpackets	<Double>	Read-only	Total number of compressed packets received by Citrix ADC.
decomptcprxpacketsrate	<Double>	Read-only	Rate (/s) counter for decomptcprxpackets
decomptcptxbytes	<Double>	Read-only	Total number of decompressed bytes transmitted by Citrix ADC.
decomptcptxbytesrate	<Double>	Read-only	Rate (/s) counter for decomptcptxbytes
decomptcptxpackets	<Double>	Read-only	Total number of decompressed packets transmitted by Citrix ADC.
decomptcptxpacketsrate	<Double>	Read-only	Rate (/s) counter for decomptcptxpackets
decomptcperrdata	<Double>	Read-only	Number of data errors encountered while decompressing.
decomptcperrdatarate	<Double>	Read-only	Rate (/s) counter for decomptcperrdata
decomptcperrlessdata	<Double>	Read-only	Number of times Citrix ADC received less data than declared by protocol.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
decomptcperrlessdatarate	<Double>	Read-only	Rate (/s) counter for decomptcperrlessdata
decomptcperrmoredata	<Double>	Read-only	Number of times Citrix ADC received more data than declared by protocol.
decomptcperrmoredatarate	<Double>	Read-only	Rate (/s) counter for decomptcperrmoredata
decomptcperrmemory	<Double>	Read-only	Number of times memory failures occurred while decompressing.
decomptcperrmemoryrate	<Double>	Read-only	Rate (/s) counter for decomptcperrmemory
decomptcperrunknown	<Double>	Read-only	Number of times unknown errors occurred while decompressing.
decomptcperrunknownrate	<Double>	Read-only	Rate (/s) counter for decomptcperrunknown
delcomptotalrequests	<Double>	Read-only	Total number of delta compression requests received by Citrix ADC.
delcomprequestsrate	<Double>	Read-only	Rate (/s) counter for delcomptotalrequests

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
delcompdone	<Double>	Read-only	Total number of delta compressions done by Citrix ADC.
delcompdonerate	<Double>	Read-only	Rate (/s) counter for delcompdone
delcomptcprxbytes	<Double>	Read-only	Total number of delta-compressible bytes received by Citrix ADC.
delcomptcprxbytesrate	<Double>	Read-only	Rate (/s) counter for delcomptcprxbytes
delcomptcptxbytes	<Double>	Read-only	Total number of delta-compressed bytes transmitted by Citrix ADC.
delcomptcptxbytesrate	<Double>	Read-only	Rate (/s) counter for delcomptcptxbytes
delcompfirstaccess	<Double>	Read-only	Total number of delta compression first accesses.
delcompfirstaccessrate	<Double>	Read-only	Rate (/s) counter for delcompfirstaccess
delcomptcprxpackets	<Double>	Read-only	Number of delta-compressible packets received.
delcomptcprxpacketsrate	<Double>	Read-only	Rate (/s) counter for delcomptcprxpackets
delcomptcptxpackets	<Double>	Read-only	Total number of delta-compressed packets transmitted by Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
delcomptcptxpackets rate	<Double>	Read-only	Rate (/s) counter for delcomptcptxpackets
delcompbaseserved	<Double>	Read-only	Total number of basefile requests served by Citrix ADC.
delcompbaseservedr ate	<Double>	Read-only	Rate (/s) counter for delcompbaseserved
delcompbasetcptxbyt es	<Double>	Read-only	Number of basefile bytes transmitted by Citrix ADC.
delcompbasetcptxbyt esrate	<Double>	Read-only	Rate (/s) counter for delcompbasetcptxbyt es
delcomperrbypassed	<Double>	Read-only	Number of times delta-compression bypassed by Citrix ADC.
delcomperrbypassed rate	<Double>	Read-only	Rate (/s) counter for delcomperrbypassed
delcomperrbfilewhdrf ailed	<Double>	Read-only	Number of times basefile could not be updated in Citrix ADC cache.
delcomperrbfilewhdrf ailedrate	<Double>	Read-only	Rate (/s) counter for delcomperrbfilewhdrf ailed
delcomperrnostoremi ss	<Double>	Read-only	Number of times basefile was not found in Citrix ADC cache.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
delcomperrnostoremissrate	<Double>	Read-only	Rate (/s) counter for delcomperrnostoremiss
delcomperrreqinfotoobig	<Double>	Read-only	Number of times basefile request URL was too large.
delcomperrreqinfotoobigrate	<Double>	Read-only	Rate (/s) counter for delcomperrreqinfotoobig
delcomperrreqinfoallocfail	<Double>	Read-only	Number of times requested basefile could not be allocated.
delcomperrreqinfoallocfailrate	<Double>	Read-only	Rate (/s) counter for delcomperrreqinfoallocfail
delcomperrsessallocfail	<Double>	Read-only	Number of times delta compression session could not be allocated.
delcomperrsessallocfailrate	<Double>	Read-only	Rate (/s) counter for delcomperrsessallocfail

Operations

Content Switching

Content Switching statistics. Content Switching feature that enables you to direct traffic to servers on the basis of content.

NAME	DESCRIPTION
csvserver	Statistics for CS virtual server resource.

csvserver

Statistics for CS virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the content switching virtual server for which to display statistics. To display statistics for all configured Content Switching virtual servers, do not specify a value for this parameter. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
avgclttlb	<Double>	Read-only	Average TTLB between the client and the server. TTLB is the time interval

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			between sending the request packet to a service and receiving the ACK for response from client.
cltresponsetimeapdex	<Double>	Read-only	Vserver APDEX index based on client response times.
establishedconn	<Double>	Read-only	Number of client connections in ESTABLISHED state.
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
tothits	<Double>	Read-only	Total vserver hits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
hitsrate	<Double>	Read-only	Rate (/s) counter for tothits
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalpktsrecvd	<Double>	Read-only	Total number of packets received by this service or virtual server.
pktsrecvdrate	<Double>	Read-only	Rate (/s) counter for totalpktsrecvd
totalpktssent	<Double>	Read-only	Total number of packets sent.
pktssentrate	<Double>	Read-only	Rate (/s) counter for totalpktssent
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.
curpersistencesessions	<Double>	Read-only	current vserver owned persistence sessions
curbackuppersistencesessions	<Double>	Read-only	current vserver owned backup persistence sessions
sothreshold	<Double>	Read-only	Spill Over Threshold set on the VServer.
totspillovers	<Double>	Read-only	Number of times vserver experienced spill over.
labelledconn	<Double>	Read-only	Number of Labeled connection on this vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pushlabel	<Double>	Read-only	Number of labels for this push vserver.
deferredreq	<Double>	Read-only	Number of deferred request on this vserver
deferredreqrate	<Double>	Read-only	Rate (/s) counter for deferredreq
invalidrequestrespon se	<Double>	Read-only	Number invalid requests/responses on this vserver
invalidrequestrespon sedropped	<Double>	Read-only	Number invalid requests/responses dropped on this vserver
totvserverdownbacku phits	<Double>	Read-only	Number of times traffic was diverted to backup vserver since primary vserver was DOWN.
curmptcpsessions	<Double>	Read-only	Current Multipath TCP sessions
cursubflowconn	<Double>	Read-only	Current Multipath TCP subflows
totclttlbtransactions	<Double>	Read-only	Total transactions where client TTLB is calculated.
toleratingttlbtransacti ons	<Double>	Read-only	Tolerable transactions based on APDEX threshold (>T ;; <4T).

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
frustratingttlbtransactions	<Double>	Read-only	Frustrating transactions based on APDEX threshold (>4T).

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/csvserver

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/csvserver?
args=name:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>

Use this query-parameter to get csvserver resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Domain Name Service

Domain Name Service(DNS) statistics.

NAME	DESCRIPTION
dns	Statistics for dns.
dnspolicylabel	Statistics for dns policy label resource.
dnsrecords	

dns

Statistics for dns.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
dnstotqueries	<Double>	Read-only	Total number of DNS queries received.
dnsqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotqueries
dnstotmultiquery	<Double>	Read-only	Total number of Multi Query request received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnstotanswers	<Double>	Read-only	Total number of DNS responses received.
dnsanswersrate	<Double>	Read-only	Rate (/s) counter for dnstotanswers
dnstotserverresponse	<Double>	Read-only	Total number of Server responses received.
dnsserverresponserate	<Double>	Read-only	Rate (/s) counter for dnstotserverresponse
dnstotrecupdate	<Double>	Read-only	Total number of record updates.
dnscurcachesize	<Double>	Read-only	Current DNS cache size
dnscurnegcachesize	<Double>	Read-only	Current Negative DNS cache size
dnstotjumboqueries	<Double>	Read-only	Total number of Jumbo DNS queries received over UDP.
dnsjumboqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotjumboqueries
dnstotjumboanswers	<Double>	Read-only	Total number of Jumbo DNS responses sent over UDP.
dnsjumboanswersrate	<Double>	Read-only	Rate (/s) counter for dnstotjumboanswers
dnstotjumboserverresponses	<Double>	Read-only	Total number of Jumbo DNS

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			responses received over UDP.
dnsjumboserverresponsesrate	<Double>	Read-only	Rate (/s) counter for dnstotjumboserverresponses
dnstotauthans	<Double>	Read-only	Number of queries which were authoritatively answered.
dnstotserverquery	<Double>	Read-only	Total number of Server queries sent.
dnsserverqueryrate	<Double>	Read-only	Rate (/s) counter for dnstotserverquery
dnstotcacheflush	<Double>	Read-only	Total number of times cache was flushed.
dnstotcacheentriesflush	<Double>	Read-only	Total number of cache entries flushed.
dnscurnoauthentries	<Double>	Read-only	Total number of non-authoritative entries.
dnscurauthentries	<Double>	Read-only	Total number of authoritative entries.
dnstotauthnonames	<Double>	Read-only	Number of queries for which no record was found.
dnstotunsupportedresponseclass	<Double>	Read-only	Total number of responses for which response types were unsupported.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnstotinvalidqueryformat	<Double>	Read-only	Total number of queries whose format was invalid.
dnstotstrayanswer	<Double>	Read-only	Total number of stray answers.
dnstotresponsebadlen	<Double>	Read-only	Number of DNS responses received with invalid resoure data length.
dnstotreqrefusals	<Double>	Read-only	Number of DNS requests refused.
dnserrnullattack	<Double>	Read-only	Total number of queries received where all the counts are 0.
dnstotunsupportedresponsetype	<Double>	Read-only	Total number of responses for which response type requested was unsupported.
dnstotunsupportedqueryclass	<Double>	Read-only	Total number of queries for which query class was unsupported.
dnstotnonauthnodatas	<Double>	Read-only	Total number of responses for which there was a format error.
dnstotnodataresps	<Double>	Read-only	Number of DNS responses received without answer.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnstotmultiquerydisableerror	<Double>	Read-only	Total number of times a multi query was disabled and received a multi query.
dnstotothererrors	<Double>	Read-only	Total number of other errors.
dns64totqueries	<Double>	Read-only	Total number of DNS64 queries recieved.
dns64queriesrate	<Double>	Read-only	Rate (/s) counter for dns64totqueries
dns64totanswers	<Double>	Read-only	Total number of DNS64 answers served.
dns64answersrate	<Double>	Read-only	Rate (/s) counter for dns64totanswers
dns64totrwanswers	<Double>	Read-only	Total number of DNS64 answers served after rewriting the response.
dns64rwanswersrate	<Double>	Read-only	Rate (/s) counter for dns64totrwanswers
dns64totresponses	<Double>	Read-only	Total number of responses recieved from backend in DNS64 context.
dns64responsesrate	<Double>	Read-only	Rate (/s) counter for dns64totresponses

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dns64totgslbqueries	<Double>	Read-only	Total number of DNS64 queries for GSLB domain
dns64gslbqueriesrate	<Double>	Read-only	Rate (/s) counter for dns64totgslbqueries
dns64totgslbanswers	<Double>	Read-only	Total number of DNS64 queries served.
dns64gslbanswersrate	<Double>	Read-only	Rate (/s) counter for dns64totgslbanswers
dns64tottcanswers	<Double>	Read-only	Total number of Answers served with TC bit set in DNS64 context.
dns64tcanswersrate	<Double>	Read-only	Rate (/s) counter for dns64tottcanswers
dns64totsvraqueries	<Double>	Read-only	Total number of Queries sent by DNS64 module to backend.
dns64svraqueriesrate	<Double>	Read-only	Rate (/s) counter for dns64totsvraqueries
dns64totaaaabypass	<Double>	Read-only	Total number of times AAAA query has been bypassed in DNS64 trnsaction.
dns64aaaabypassrate	<Double>	Read-only	Rate (/s) counter for dns64totaaaabypass
dns64tottcpqueries	<Double>	Read-only	Total number of dns64 queries over TCP

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dns64tcpqueriesrate	<Double>	Read-only	Rate (/s) counter for dns64tottcpqueries
dns64activepolicies	<Double>	Read-only	Total number of active dns64 policies
dns64totnodataresp	<Double>	Read-only	Total number of responses recieved from backend with ancount 0
dns64nodataresprate	<Double>	Read-only	Rate (/s) counter for dns64totnodataresp
dnstotnsrecqueries	<Double>	Read-only	Total number of NS queries received.
dnsnsrecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotnsrecqueries
dnstotsoarecqueries	<Double>	Read-only	Total number of SOA queries received.
dnssoarecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotsoarecqueries
dnstotptrrecqueries	<Double>	Read-only	Total number of PTR queries received.
dnsptrrecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotptrrecqueries
dnstotsrvrecqueries	<Double>	Read-only	Total number of SRV queries received.
dnssrvrecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotsrvrecqueries
dnstotaresponse	<Double>	Read-only	Total number of A responses received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnsaresponserate	<Double>	Read-only	Rate (/s) counter for dnstotaresponse
dnstotcnamerespons e	<Double>	Read-only	Total number of CNAME responses received.
dnscnameresponser ate	<Double>	Read-only	Rate (/s) counter for dnstotcnamerespons e
dnstotmxresponse	<Double>	Read-only	Total number of MX responses received.
dnsmxresponserate	<Double>	Read-only	Rate (/s) counter for dnstotmxresponse
dnstotanyresponse	<Double>	Read-only	Total number of ANY responses received.
dnsanyresponserate	<Double>	Read-only	Rate (/s) counter for dnstotanyresponse
dnstotnsrecupdate	<Double>	Read-only	Total number of NS record updates.
dnstotsoarecupdate	<Double>	Read-only	Total number of SOA record updates.
dnstotptrrecupdate	<Double>	Read-only	Total number of PTR record updates.
dnstotsrvrecupdate	<Double>	Read-only	Total number of SRV record updates.
dnstotaaaarecquerie s	<Double>	Read-only	Total number of AAAA queries received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnsaaaarecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotaaaarecqueries
dnstotarecqueries	<Double>	Read-only	Total number of A queries received.
dnsarecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotarecqueries
dnstotcnamerecqueries	<Double>	Read-only	Total number of CNAME queries received.
dnscnamerecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotcnamerecqueries
dnstotmxrecqueries	<Double>	Read-only	Total number of MX queries received.
dnsmxrecqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotmxrecqueries
dnstotanyqueries	<Double>	Read-only	Total number of ANY queries received.
dnsanyqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotanyqueries
dnstotaaaaresponse	<Double>	Read-only	Total number of AAAA responses received.
dnsaaaaresponserate	<Double>	Read-only	Rate (/s) counter for dnstotaaaaresponse
dnstotnsresponse	<Double>	Read-only	Total number of NS responses received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnsnsresponserate	<Double>	Read-only	Rate (/s) counter for dnstotnsresponse
dnstotsoaresponse	<Double>	Read-only	Total number of SOA responses received.
dnssoaresponserate	<Double>	Read-only	Rate (/s) counter for dnstotsoaresponse
dnstotptrresponse	<Double>	Read-only	Total number of PTR responses received.
dnsptrresponserate	<Double>	Read-only	Rate (/s) counter for dnstotptrresponse
dnstotsrvresponse	<Double>	Read-only	Total number of SRV responses received.
dnssrvresponserate	<Double>	Read-only	Rate (/s) counter for dnstotsrvresponse
dnstotaaaarecupdate	<Double>	Read-only	Total number of AAAA record updates.
dnstotarecupdate	<Double>	Read-only	Total number of A record updates.
dnstotmxrecupdate	<Double>	Read-only	Total number of MX record updates.
dnstotcnamerecupdate	<Double>	Read-only	Total number of CNAME record updates.
dnscuraaaarecord	<Double>	Read-only	Total number of AAAA records.
dnscurarecord	<Double>	Read-only	Total number of A records.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnscurmxrecord	<Double>	Read-only	Total number of MX records.
dnscurcnamerecord	<Double>	Read-only	Total number of CNAME records.
dnscurnsrecord	<Double>	Read-only	Total number of NS records.
dnscursoarecord	<Double>	Read-only	Total number of SOA records.
dnscurptrrecord	<Double>	Read-only	Total number of PTR records.
dnscursrvrecord	<Double>	Read-only	Total number of SRV records.
dnstotaaaarecfailed	<Double>	Read-only	Total number of times AAAA record lookup failed.
dnstotarecfailed	<Double>	Read-only	Total number of times A record lookup failed.
dnstotmxrecfailed	<Double>	Read-only	Total number of times MX record lookup failed.
dnstotptrrecfailed	<Double>	Read-only	Total number of times PTR record lookup failed.
dnstotnsrecfailed	<Double>	Read-only	Total number of times NS record lookup failed.
dnstotcnamerecfaile d	<Double>	Read-only	Total number of times CNAME record lookup failed.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dnstotsoarecfailed	<Double>	Read-only	Total number of times SOA record lookup failed.
dnstotsrvrecfailed	<Double>	Read-only	Total number of times SRV record lookup failed.
dnstotanyrecfailed	<Double>	Read-only	Total number of times ANY query lookup failed.
dnstotunsupportedqueries	<Double>	Read-only	Total number of requests for which query type requested was unsupported.

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/dns

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/dns?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get dns resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

dnspolicylabel

Statistics for dns policy label resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
labelname	<String>	Read-write	The name of the dns policy label for which statistics will be displayed. If not given statistics are shown for all dns policylabels. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pipolicylabelhits	<Double>	Read-only	Number of times policy label was invoked.
pipolicylabelhitsrate	<Double>	Read-only	Rate (/s) counter for pipolicylabelhits

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/dnspolicylabel

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/dnspolicylabel?
args=labelname:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_va

Use this query-parameter to get dnspolicylabel resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

Front-end-optimization

Front end optimization statistics. The system's feature to optimize Web content for performance.

NAME	DESCRIPTION
feo	Statistics for feo.

feo

Statistics for feo.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
optcacheobjects	<Double>	Read-only	Total number of optimized cache objects ready to be served.
optcacheobjectsrate	<Double>	Read-only	Rate (/s) counter for optcacheobjects
origcacheobjects	<Double>	Read-only	Total number of original cache objects ready to be served.
origcacheobjectsrate	<Double>	Read-only	Rate (/s) counter for origcacheobjects
totalimgsdomainsharded	<Double>	Read-only	Total no of images whose domain has been set from shards.
imgsdomainshardedrate	<Double>	Read-only	Rate (/s) counter for totalimgsdomainsharded
totalimgslazyloaded	<Double>	Read-only	Total number of images modified for lazy loading.
imgslazyloadedrate	<Double>	Read-only	Rate (/s) counter for totalimgslazyloaded
toturireplaced	<Double>	Read-only	Total number of URI replaced.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
urireplacedrate	<Double>	Read-only	Rate (/s) counter for toturireplaced
totalimgsinlinedincss	<Double>	Read-only	Total number of images inlined in CSS.
imgsinlinedincssrate	<Double>	Read-only	Rate (/s) counter for totalimgsinlinedincss
totalinlinedjs	<Double>	Read-only	Total number of inlined JS files.
inlinedjsrate	<Double>	Read-only	Rate (/s) counter for totalinlinedjs
totalinlinedcss	<Double>	Read-only	Total number of inlined CSS files.
inlinedcssrate	<Double>	Read-only	Rate (/s) counter for totalinlinedcss
totalinlinedimgs	<Double>	Read-only	Total number of inlined images in HTML.
inlinedimgsrate	<Double>	Read-only	Rate (/s) counter for totalinlinedimgs
totaldatasavings	<Double>	Read-only	Total data savings in bytes.
datasavingsrate	<Double>	Read-only	Rate (/s) counter for totaldatasavings
htmlcommentsremoved	<Double>	Read-only	The total number of HTML comments removed.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
htmlcommentsremovedrate	<Double>	Read-only	Rate (/s) counter for htmlcommentsremoved
totalcacheextended	<Double>	Read-only	The total number of objects cache extended.
cacheextendedrate	<Double>	Read-only	Rate (/s) counter for totalcacheextended
totalcsscombined	<Double>	Read-only	The total number of CSS combined.
csscombinedrate	<Double>	Read-only	Rate (/s) counter for totalcsscombined
totalimporttolink	<Double>	Read-only	The total number of CSS imports converted to links
importtolinkrate	<Double>	Read-only	Rate (/s) counter for totalimporttolink
totaljsmoved	<Double>	Read-only	The total number of JS moved to end.
jsmovedrate	<Double>	Read-only	Rate (/s) counter for totaljsmoved
totalcssmoved	<Double>	Read-only	The total number of CSS moved to head.
cssmovedrate	<Double>	Read-only	Rate (/s) counter for totalcssmoved
totaljsmin	<Double>	Read-only	The total number of JS files minified.
jsminrate	<Double>	Read-only	Rate (/s) counter for totaljsmin

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalcssmin	<Double>	Read-only	The total number of CSS files minified.
cssminrate	<Double>	Read-only	Rate (/s) counter for totalcssmin
totalimgstojxr	<Double>	Read-only	The total number of images converted to JPEGXR format.
imgstojxrrate	<Double>	Read-only	Rate (/s) counter for totalimgstojxr
totalimgstowebp	<Double>	Read-only	The total number of images converted to WEBP format.
imgstowebprate	<Double>	Read-only	Rate (/s) counter for totalimgstowebp
totaljpegsoptimized	<Double>	Read-only	The total number of JPEG format images optimized.
jpegsoptimizedrate	<Double>	Read-only	Rate (/s) counter for totaljpegsoptimized
totalgifstopng	<Double>	Read-only	The total number of images converted from GIF to PNG format.
gifstopngrate	<Double>	Read-only	Rate (/s) counter for totalgifstopng
totalimgsresized	<Double>	Read-only	The total number of images resized to dimensions in the <img> tag.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
imgsresizedrate	<Double>	Read-only	Rate (/s) counter for totalimgsresized

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

Global Server Load Balancing

Global Server Load Balancing (GSLB) statistics. GSLB feature ensures that client requests are directed to a best performing site available in a global enterprise and distributed Internet environment.

NAME	DESCRIPTION
gslbdomain	Statistics for GSLB domain resource.
gslbservice	Statistics for GSLB service resource.
gslbservicegroup	Statistics for GSLB service group resource.
gslbservicegroupmember	Statistics for GSLB service group entity resource.
gslbsite	Statistics for GSLB site resource.
gslbvserver	Statistics for Global Server Load Balancing Virtual Server resource.

gslbdomain

Statistics for GSLB domain resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the GSLB domain for which to display statistics. If you do not specify a name, statistics are shown for all configured GSLB domains. Minimum length = 1
dnsrecordtype	<String>	Read-write	. Possible values = A, AAAA, CNAME, NAPTR

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
dnstotalqueries	<Double>	Read-only	Total number of DNS queries received.
dnsqueriesrate	<Double>	Read-only	Rate (/s) counter for dnstotalqueries
gslbdnsrectype	<String>	Read-only	Type of DNS record returned

```

gslbservice

Statistics for GSLB service resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicename	<String>	Read-write	Name of the GSLB service. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
establishedconn	<Double>	Read-only	Number of client connections in ESTABLISHED state.
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
servicetype	<String>	Read-only	The service type of this service.Possible values are ADNS, DNS, MYSQL, RTSP, SSL_DIAMETER, ADNS_TCP, DNS_TCP, NNTP, SIP_UDP, SSL_TCP, ANY, FTP, RADIUS, SNMP, TCP, DHCPRA, HTTP, RDP, SSL, TFTP, DIAMETER,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			MSSQL, RPCSVR, SSL_BRIDGE, UDP
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
curload	<Double>	Read-only	Load on the service that is calculated from the bound load based monitor.
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.
vsvrservicehits	<Double>	Read-only	Number of times that the service has been provided.
vsvrservicehitsrate	<Double>	Read-only	Rate (/s) counter for vsvrservicehits

gslbsite

Statistics for GSLB site resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sitename	<String>	Read-write	Name of the GSLB site for which to display detailed statistics. If a name is not specified, basic information about all GSLB sites is displayed. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
sitepublicip	<String>	Read-only	The public IP address of this GSLB site.
siteip	<String>	Read-only	The private IP address of this GSLB site.
sitemepstatus	<String>	Read-only	Indicates the status of the Metric Exchange Policy at this GSLB site.
persexchange	<String>	Read-only	Indicates whether Persistence entries exchange is enabled or disabled at this GSLB site.
nwmetricexchange	<String>	Read-only	Indicates whether network metric exchange is enabled or disabled at this GSLB site.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sitemetricexchange	<String>	Read-only	Indicates whether metric exchange is enabled or disabled at this GSLB site.
sitetype	<String>	Read-only	Indicates whether this GSLB site is local or remote.
siteipstr	<String>	Read-only	The private IP address of this GSLB site.
sitepublicipstr	<String>	Read-only	The public IP address of this GSLB site.
sitemetricmepstatus	<String>	Read-only	Indicates the status of the site metric Metric Exchange connection at this GSLB site.
nwmetricmepstatus	<String>	Read-only	Indicates the status of the network metric Metric Exchange connection at this GSLB site.
sitetotalrequestbytes	<Double>	Read-only	Total number of request bytes received by the virtual servers represented by all GSLB services associated with this GSLB site.
siterequestbytesrate	<Double>	Read-only	Rate (/s) counter for sitetotalrequestbytes

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sitetotalresponsebytes	<Double>	Read-only	Number of response bytes received by the virtual servers represented by all GSLB services associated with this GSLB site.
siteresponsebytesrate	<Double>	Read-only	Rate (/s) counter for sitetotalresponsebytes
sitetotalrequests	<Double>	Read-only	Total number of requests received by the virtual servers represented by all GSLB services associated with this GSLB site.
siterequestsrate	<Double>	Read-only	Rate (/s) counter for sitetotalrequests
sitetotalresponses	<Double>	Read-only	Number of responses received by the virtual servers represented by all GSLB services associated with this GSLB site.
siteresponsesrate	<Double>	Read-only	Rate (/s) counter for sitetotalresponses
sitecurclntconnections	<Double>	Read-only	Number of current client connections to the virtual servers represented by all GSLB services associated with this GSLB site.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sitecursrvrconnections	<Double>	Read-only	Number of current connections to the real servers behind the virtual servers represented by all GSLB services associated with this GSLB site.

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:` *

Mandatory parameters are marked in redand placeholder content is marked in <green>.

gslbvserver

Statistics for Global Server Load Balancing Virtual Server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the GSLB virtual server for which to display statistics. If you do not specify a name, statistics are displayed for all GSLB virtual servers. Minimum length = 1

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
establishedconn	<Double>	Read-only	Number of client connections in ESTABLISHED state.
inactsvcs	<Double>	Read-only	number of INACTIVE services bound to a vserver
vslbhealth	<Double>	Read-only	Health of the vserver. This gives percentage of UP services bound to this vserver.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
actsvcs	<Double>	Read-only	number of ACTIVE services bound to a vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tothits	<Double>	Read-only	Total vserver hits
hitsrate	<Double>	Read-only	Rate (/s) counter for tothits
vsvrtotbkplbhits	<Double>	Read-only	Total backup LB method hits
vsvrtotbkplbfail	<Double>	Read-only	Total backup LB method fails
curpersistencesessions	<Double>	Read-only	current vserver owned persistence sessions
vsvrtotpersistencehits	<Double>	Read-only	Total number of Persistence hits at vserver
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
sothreshold	<Double>	Read-only	Spill Over Threshold set on the VServer.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totspillovers	<Double>	Read-only	Number of times vserver experienced spill over.
totvserverdownbackuphits	<Double>	Read-only	Number of times traffic was diverted to backup vserver since primary vserver was DOWN.
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.

gslbservicegroupmember

Statistics for GSLB service group entity resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
servicegroupname	<String>	Read-write	Displays statistics for the specified GSLB service group.Name of the GSLB service group. Must begin with an ASCII alphanumeric or underscore (_) character, and must contain only ASCII alphanumeric, underscore, hash (#), period (.), space, colon (:), at sign (@), equal sign (=), and hyphen (-)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			characters.CLI Users: If the name includes one or more spaces, enclose the name in double or single quotation marks (for example, "my servicegroup" or 'my servicegroup'). Minimum length = 1
ip	<String>	Read-write	IP address of the GSLB service group. Mutually exclusive with the server name parameter.
servername	<String>	Read-write	Name of the server. Mutually exclusive with the IP address parameter. Minimum length = 1
port	<Integer>	Read-write	Port number of the service group member. Range 1 - 65535 * in CLI is represented as 65535 in NITRO API
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
establishedconn	<Double>	Read-only	Number of client connections in

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ESTABLISHED state.
primaryipaddress	<String>	Read-only	The IP address on which the service is running.
primaryport	<Integer>	Read-only	The port on which the service is running.
servicetype	<String>	Read-only	The service type of this service.Possible values are ADNS, DNS, MYSQL, RTSP, SSL_DIAMETER, ADNS_TCP, DNS_TCP, NNTP, SIP_UDP, SSL_TCP, ANY, FTP, RADIUS, SNMP, TCP, DHCPRA, HTTP, RDP, SSL, TFTP, DIAMETER, MSSQL, RPCSVR, SSL_BRIDGE, UDP
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
curload	<Double>	Read-only	Load on the service that is calculated from the bound load based monitor.
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.

High Availability

High-availability commands.

NAME	DESCRIPTION
hanode	Statistics for node resource.

hanode

Statistics for node resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
hacurstatus	<String>	Read-only	Whether a Citrix ADC is configured for high availability. Possible values are YES and NO. If the value is NO, the high availability statistics below are invalid.
hacurstate	<String>	Read-only	State of the HA node, based on its health, in a high availability setup. Possible values are: UP - Indicates that the node is accessible and can function as either a primary or secondary node. DISABLED - Indicates that the high availability status of the node has been manually disabled. Synchronization and propagation cannot take place between the peer nodes. INIT

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			- Indicates that the node is in the process of becoming part of the high availability configuration. PARTIALFAIL - Indicates that one of the high availability monitored interfaces has failed because of a card or link failure. This state triggers a failover. COMPLETEFAIL - Indicates that all the interfaces of the node are unusable, because the interfaces on which high availability monitoring is enabled are not connected or are manually disabled. This state triggers a failover. DUMB - Indicates that the node is in listening mode. It does not participate in high availability transitions or transfer configuration from the peer node. This is a configured value, not a statistic. PARTIALFAILSSL - Indicates that the SSL card has failed. This state triggers a

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			failover. ROUTEMONITORFAIL - Indicates that the route monitor has failed. This state triggers a failover.
hacurmasterstate	<String>	Read-only	Indicates the high availability state of the node. Possible values are: STAYSECONDARY - Indicates that the selected node remains the secondary node in a high availability setup. In this case a forced failover does not change the state but, instead, returns an appropriate error message. This is a configured value and not a statistic. PRIMARY - Indicates that the selected node is the primary node in a high availability setup. SECONDARY - Indicates that the selected node is the secondary node in a high availability setup. CLAIMING - Indicates that the secondary node is in the process of taking over as the primary node. This is the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			intermediate state in the transition of the secondary node to primary status. FORCE CHANGE - Indicates that the secondary node is forcibly changing its status to primary due to a forced failover issued on the secondary node.
transtime	<String>	Read-only	Time when the last master state transition occurred. You can use this statistic for debugging.
hatotpktrx	<Double>	Read-only	Number of heartbeat packets received from the peer node. Heartbeats are sent at regular intervals (default is 200 milliseconds) to determine the state of the peer node.
hapktrxrate	<Double>	Read-only	Rate (/s) counter for hatotpktrx
hatotpkttx	<Double>	Read-only	Number of heartbeat packets sent to the peer node. Heartbeats are sent at regular intervals (default is 200 milliseconds) to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			determine the state of the peer node.
hapkttxrate	<Double>	Read-only	Rate (/s) counter for hatotpkttx
haerrproptimeout	<Double>	Read-only	Number of times propagation timed out.
haerrsyncfailure	<Double>	Read-only	Number of times the configuration of the primary and secondary nodes failed to synchronize since that last transition. A synchronization failure results in mismatched configuration. It can be caused by a mismatch in the Remote Procedural Call (RPC) password on the two nodes forming the high availability pair.

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/hanode

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/hanode?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get hanode resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "hanode": [ {

"haerrsyncfailure":<Double_value>,

"haerrproptimeout":<Double_value>,

"hapkttxrate":<Double_value>,

"hacurstate":<String_value>,

"hatotpktrx":<Double_value>

}]}
```

HTTP DoS Protection

HTTP DOS protection statistics.

NAME	DESCRIPTION
dos	Statistics for dos.

NAME	DESCRIPTION
dospolicy	Statistics for DoS policy resource.

dos

Statistics for dos.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
dostotconditiontriggered	<Double>	Read-only	Number of times the Citrix ADC triggered the DOS JavaScript due to a condition match.
dosconditiontriggeredrate	<Double>	Read-only	Rate (/s) counter for dostotconditiontriggered
dostotvalidcookies	<Double>	Read-only	Number of clients from whom the Citrix ADC received a valid DOS cookie.
dosvalidcookiesrate	<Double>	Read-only	Rate (/s) counter for dostotvalidcookies
dostotdospriorityclients	<Double>	Read-only	Number of valid clients that were given DOS priority.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dosdospriorityclientsrate	<Double>	Read-only	Rate (/s) counter for dostotdospriorityclients

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

```
}]}
```

dospolicy

Statistics for DoS policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	The name of the DoS protection policy whose statistics must be displayed. If a name is not provided, statistics of all the DoS protection policies are displayed. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
doscurrentcltdetectrate	<Double>	Read-only	Current ratio of JavaScript send rate to the server response rate (Client detect rate)
dosphysicalserviceip	<String>	Read-only	IP address of the service to which this policy is bound.
dosphysicalserviceport	<Integer>	Read-only	Port address of the service to which this policy is bound.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
doscurrentqueuesize	<Double>	Read-only	Current queue size of the server to which this policy is bound.
doscurrentqueuesize rate	<Double>	Read-only	Rate (/s) counter for doscurrentqueuesize
dostotjssent	<Double>	Read-only	Total number of DoS JavaScript transactions performed for this policy.
dosjssentrate	<Double>	Read-only	Rate (/s) counter for dostotjssent
dostotjsrefused	<Double>	Read-only	Number of times the DoS JavaScript was not sent because the set JavaScript rate was not met for this policy.
dosjsrefusedrate	<Double>	Read-only	Rate (/s) counter for dostotjsrefused
dostotvalidclients	<Double>	Read-only	Total number of valid DoS cookies received for this policy.
dosvalidclientsrate	<Double>	Read-only	Rate (/s) counter for dostotvalidclients
dostotjsbytessent	<Double>	Read-only	Total number of DoS JavaScript bytes sent for this policy.
dosjsbytessentrate	<Double>	Read-only	Rate (/s) counter for dostotjsbytessent

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
dostotnongetpostrequests	<Double>	Read-only	Number of non-GET and non-POST requests for which DOS JavaScript was sent.
dosnongetpostrequestsrate	<Double>	Read-only	Rate (/s) counter for dostotnongetpostrequests

```

Integrated Caching

Integrated Caching statistics. The Integrated Caching feature is used to cache static and dynamic web application data.

NAME	DESCRIPTION
cache	Statistics for cache.
cachecontentgroup	Statistics for Integrated Cache content group resource.
cachepolicy	Statistics for Integrated Cache policy resource.
cachepolicylabel	Statistics for cache policy label resource.

cache

Statistics for cache.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
cachemaxmemorykb	<Double>	Read-only	Largest amount of memory the Citrix ADC can dedicate to caching, up to 50% of available memory. A 0 value disables caching, but the caching module continues to run.
cacherecentpercentsuccessfulrevalidation	<Double>	Read-only	Recently recorded percentage of times stored content was successfully revalidated by a 304 response rather than by a full response
cacherecentpercentstoreablemiss	<Double>	Read-only	Recently recorded ratio of store-able misses to all misses expressed as percentage.
cacherecentpercentparameterizedhits	<Double>	Read-only	Recently recorded ratio of parameterized 304 hits to all parameterized hits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			expressed as a percentage
cacherecentpercentoriginbandwidthsaved	<Double>	Read-only	Bytes served from cache divided by total bytes served to client. This ratio can be greater than 1 because of the assumption that all compression has been done in the Citrix ADC.
cacherecentpercenthit	<Double>	Read-only	Recently recorded cache hit ratio expressed as percentage
cacherecentpercentbytehit	<Double>	Read-only	Recently recorded cache byte hit ratio expressed as percentage. Here we define byte hit ratio as ((number of bytes served from the cache)/(total number of bytes served to the client)). This is the standard definition of Byte Hit Ratio. If compression is turned ON in NS then this ratio doesn't mean much. This might under or over estimate the origin-to-cache bandwidth saving (depending upon whether bytes

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			served by CMP in Citrix ADC are more or less than compressed bytes served from the cache). If CMP is turned OFF in NS then this ratio is same as cacheRecentPercentOriginBandwidthSaved.
cacherecentpercent304hits	<Double>	Read-only	Recently recorded ratio of 304 hits to all hits expressed as percentage
cacheutilizedmemorykb	<Double>	Read-only	Amount of memory the integrated cache is currently using.
cachemaxmemoryactivekb	<Double>	Read-only	Currently active value of maximum memory
cache64maxmemorykb	<Double>	Read-only	Largest amount of memory the Citrix ADC can dedicate to caching, up to 50% of available memory. A 0 value disables caching, but the caching module continues to run.
cachepercentpethits	<Double>	Read-only	Percentage of cache hits in content groups that have Poll Every Time enabled, relative to all searches of content

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			groups with Poll Every Time enabled.
cachetotpethits	<Double>	Read-only	Number of times a cache hit was found during a search of a content group that has Poll Every Time enabled.
cachepethitsrate	<Double>	Read-only	Rate (/s) counter for cachetotpethits
cachepercentparameterized304hits	<Double>	Read-only	Percentage of parameterized 304 hits relative to all parameterized hits.
cachetotparameterizedhits	<Double>	Read-only	Parameterized requests resulting in either a 304 or non-304 hit.
cacheparameterizedhitsrate	<Double>	Read-only	Rate (/s) counter for cachetotparameterizedhits
cachepercentsuccessfulrevalidation	<Double>	Read-only	Percentage of times stored content was successfully revalidated by a 304 (Object Not Modifed) response rather than by a full response
cachepercentstoreablemiss	<Double>	Read-only	Responses that were fetched from the origin, stored in the cache, and then served to the client,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			as a percentage of all cache misses.
cachetotfulltoconditionalrequest	<Double>	Read-only	Number of user-agent requests for a cached Poll Every Time (PET) response that were sent to the origin server as conditional requests.
cachefulltoconditionalrequestrate	<Double>	Read-only	Rate (/s) counter for cachetotfulltoconditionalrequest
cachetotsuccessfulrevalidation	<Double>	Read-only	Total number of times stored content was successfully revalidated by a 304 Not Modified response from the origin.
cachesuccessfulrevalidationrate	<Double>	Read-only	Rate (/s) counter for cachetotsuccessfulrevalidation
cachetotrevalidationmiss	<Double>	Read-only	Responses that an intervening cache revalidated with the integrated cache before serving, as determined by a Cache-Control: Max-Age header configurable in the integrated cache

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cacherevalidationmissrate	<Double>	Read-only	Rate (/s) counter for cachetotrevalidation miss
cachetotnonstoreablemisses	<Double>	Read-only	Cache misses for which the fetched response is not stored in the cache. These responses match policies with a NOCACHE action or are affected by Poll Every Time.
cachenonstoreablemissesrate	<Double>	Read-only	Rate (/s) counter for cachetotnonstoreablemisses
cachetotstoreablemisses	<Double>	Read-only	Cache misses for which the fetched response is stored in the cache before serving it to the client. Storable misses conform to a built-in or user-defined caching policy that contains a CACHE action.
cachestoreablemissesrate	<Double>	Read-only	Rate (/s) counter for cachetotstoreablemisses
cachecompressedbytesserved	<Double>	Read-only	Number of compressed bytes served from the cache

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachecompressedbytesservedrate	<Double>	Read-only	Rate (/s) counter for cachecompressedbytesserved
cachepercentbytehit	<Double>	Read-only	Bytes served from the cache divided by total bytes served to the client. If compression is On in the Citrix ADC, this ratio may not reflect the bytes served by the compression module. If the compression is Off, this ratio is the same as cachePercentOriginBandwidthSaved.
cachebytesserved	<Double>	Read-only	Total number of bytes served from the integrated cache
cachebytesservedrate	<Double>	Read-only	Rate (/s) counter for cachebytesserved
cachetotresponsebytes	<Double>	Read-only	Total number of HTTP response bytes served by Citrix ADC from both the origin and the cache
cacheresponsebytesrate	<Double>	Read-only	Rate (/s) counter for cachetotresponsebytes
cachepercent304hits	<Double>	Read-only	304 responses as a percentage of all

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			responses that the Citrix ADC served.
cachenummarker	<Double>	Read-only	Marker objects created when a response exceeds the maximum or minimum size for entries in its content group or has not yet received the minimum number of hits required for items in its content group.
cachepercentoriginbandwidthsaved	<Double>	Read-only	Percentage of origin bandwidth saved, expressed as number of bytes served from the integrated cache divided by all bytes served. The assumption is that all compression is done in the Citrix ADC.
cachepercenthit	<Double>	Read-only	Cache hits as percentage of the total number of requests
cachetotmisses	<Double>	Read-only	Intercepted HTTP requests requiring fetches from origin server.
cachemissesrate	<Double>	Read-only	Rate (/s) counter for cachetotmisses

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachetothits	<Double>	Read-only	Responses served from the integrated cache. These responses match a policy with a CACHE action.
cachehitsrate	<Double>	Read-only	Rate (/s) counter for cachetothits
cachetotrequests	<Double>	Read-only	Total cache hits plus total cache misses.
cacherequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotrequests
cachenumcached	<Double>	Read-only	Responses currently in integrated cache. Includes responses fully downloaded, in the process of being downloaded, and expired or flushed but not yet removed.
cachecurhits	<Double>	Read-only	This number should be close to the number of hits being served currently.
cachecurmisses	<Double>	Read-only	Responses fetched from the origin and served from the cache. Should approximate storable misses. Does not include non-storable misses.
cachetotnon304hits	<Double>	Read-only	Total number of full (non-304) responses

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			served from the cache. A 304 status code indicates that a response has not been modified since the last time it was served
cachenon304hitsrate	<Double>	Read-only	Rate (/s) counter for cachetotnon304hits
cachetot304hits	<Double>	Read-only	Object not modified responses served from the cache. (Status code 304 served instead of the full response.)
cache304hitsrate	<Double>	Read-only	Rate (/s) counter for cachetot304hits
cachetotsqlhits	<Double>	Read-only	sql response served from cache
cachesqlhitsrate	<Double>	Read-only	Rate (/s) counter for cachetotsqlhits
cachetotexpireatlastbyte	<Double>	Read-only	Instances of content expiring immediately after receiving the last body byte due to the Expire at Last Byte setting for the content group.
cacheexpireatlastbyterate	<Double>	Read-only	Rate (/s) counter for cachetotexpireatlastbyte
cachetotflashcachemisses	<Double>	Read-only	Number of requests to a content group with flash cache

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			enabled that were cache misses. Flash cache distributes the response to all the clients in aqueue.
cacheflashcachemissesrate	<Double>	Read-only	Rate (/s) counter for cachetotflashcachemisses
cachetotflashcachehits	<Double>	Read-only	Number of requests to a content group with flash cache enabled that were cache hits. The flash cache setting queues requests that arrive simultaneously and distributes the response to all the clients in the queue.
cacheflashcachehitsrate	<Double>	Read-only	Rate (/s) counter for cachetotflashcachehits
cachetotparameterizedinvalidationrequests	<Double>	Read-only	Requests matching a policy with an invalidation (INVAL) action and a content group that uses an invalidation selector or parameters.
cacheparameterizedinvalidationrequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotparameterizedinvalidationrequests

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cachetotnonparameterizedinvalidationrequests	<Double>	Read-only	Requests that match an invalidation policy where the invalGroups parameter is configured and expires one or more content groups.
cachenonparameterizedinvalidationrequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotnonparameterizedinvalidationrequests
cachetotinvalidationrequests	<Double>	Read-only	Requests that match an invalidation policy and result in expiration of specific cached responses or entire content groups.
cacheinvalidationrequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotinvalidationrequests
cachetotparameterizedrequests	<Double>	Read-only	Total number of requests where the content group has hit and invalidation parameters or selectors.
cacheparameterizedrequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotparameterizedrequests
cachetotparameterizednon304hits	<Double>	Read-only	Parameterized requests resulting in a full response (not status code 304:

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Object Not Updated) served from the cache.
cacheparameterized non304hitsrate	<Double>	Read-only	Rate (/s) counter for cachetotparameterized non304hits
cachetotparameterized304hits	<Double>	Read-only	Parameterized requests resulting in an object not modified (status code 304) response.
cacheparameterized 304hitsrate	<Double>	Read-only	Rate (/s) counter for cachetotparameterized304hits
cachetotpetrequests	<Double>	Read-only	Requests that triggered a search of a content group that has Poll Every Time (PET) enabled (always consult the origin server before serving cached data).
cachepetrequestsrate	<Double>	Read-only	Rate (/s) counter for cachetotpetrequests
cacheerrmemalloc	<Double>	Read-only	Total number of times the cache failed to allocate memory to store responses.
cachelargestresponsereceived	<Double>	Read-only	Size, in bytes, of largest response sent to client from

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the cache or the origin server.

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

cachecontentgroup

Statistics for Integrated Cache content group resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the cache contentgroup for which to display statistics. If you do not set this parameter, statistics are shown for all cache contentgroups. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
groupnon304hit	<Double>	Read-only	Non304 hits for ContentGroup
group304hit	<Double>	Read-only	304 hits for ContentGroup

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totcell	<Double>	Read-only	Number of objects in contentgroup
totmarkercell	<Double>	Read-only	Number of marker objects in contentgroup
timesflushed	<Double>	Read-only	Number of times contentgroup is flushed
totmemory	<Double>	Read-only	current memory usage
maxmemory	<Double>	Read-only	maximum memory usage limit

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:` *

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/cachecontentgroup

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/cachecontentgroup?
args=name:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>

Use this query-parameter to get cachecontentgroup resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Load Balancing

Load Balancing statistics. The load balancing methods manage the selection of an appropriate physical server in a server farm.

NAME	DESCRIPTION
lbvserver	Statistics for Load Balancing Virtual Server resource.

lbvserver

Statistics for Load Balancing Virtual Server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the virtual server. If no name is provided, statistical data of all configured virtual servers is displayed. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
sortby	<String>	Read-write	use this argument to sort by specific key. Possible values =
sortorder	<String>	Read-write	use this argument to specify sort order.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: SORT_DESCENDING Possible values = ascending, descending
avgcltttlb	<Double>	Read-only	Average TTLB between the client and the server. TTLB is the time interval between sending the request packet to a service and receiving the ACK for response from client.
cltresponsetimeapdex	<Double>	Read-only	Vserver APDEX index based on client response times.
vsvrsurgecount	<Double>	Read-only	Number of requests waiting on this vserver.
establishedconn	<Double>	Read-only	Number of client connections in ESTABLISHED state.
inactsvcs	<Double>	Read-only	number of INACTIVE services bound to a vserver
vslbhealth	<Double>	Read-only	Health of the vserver. This gives percentage of UP services bound to this vserver.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
primaryipaddress	<String>	Read-only	IP address of the vserver
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
actsvcs	<Double>	Read-only	number of ACTIVE services bound to a vserver
tothits	<Double>	Read-only	Total vserver hits
hitsrate	<Double>	Read-only	Rate (/s) counter for tothits
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
totalpktsrecvd	<Double>	Read-only	Total number of packets received by this service or virtual server.
pktsrecvdrate	<Double>	Read-only	Rate (/s) counter for totalpktsrecvd
totalpktssent	<Double>	Read-only	Total number of packets sent.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pktssentrate	<Double>	Read-only	Rate (/s) counter for totalpktssent
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.
curpersistencesessions	<Double>	Read-only	current vserver owned persistence sessions
curbackuppersistencesessions	<Double>	Read-only	current vserver owned backup persistence sessions
surgecount	<Double>	Read-only	Number of requests in the surge queue.
svcsurgecount	<Double>	Read-only	Total number of requests in the surge queues of all the services bound to this LB-vserver.
sothreshold	<Double>	Read-only	Spill Over Threshold set on the VServer.
totspillovers	<Double>	Read-only	Number of times vserver experienced spill over.
labelledconn	<Double>	Read-only	Number of Labeled connection on this vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pushlabel	<Double>	Read-only	Number of labels for this push vserver.
deferredreq	<Double>	Read-only	Number of deferred request on this vserver
deferredreqrate	<Double>	Read-only	Rate (/s) counter for deferredreq
invalidrequestrespon se	<Double>	Read-only	Number invalid requests/responses on this vserver
invalidrequestrespon sedropped	<Double>	Read-only	Number invalid requests/responses dropped on this vserver
totvserverdownbacku phits	<Double>	Read-only	Number of times traffic was diverted to backup vserver since primary vserver was DOWN.
curmptcpsessions	<Double>	Read-only	Current Multipath TCP sessions
cursubflowconn	<Double>	Read-only	Current Multipath TCP subflows
totalconnreassembly queue75	<Double>	Read-only	Total no of connections with 75% TCP reassembly queue
totalconnreassembly queueflush	<Double>	Read-only	Total no of connections incurred TCP reassembly queue flush

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
totalsvrbusyerr	<Double>	Read-only	Total no of server busy error
svrbusyerrrate	<Double>	Read-only	Rate (/s) counter for totalsvrbusyerr
totclttlbtransactions	<Double>	Read-only	Total transactions where client TTLB is calculated.
toleratingttlbtransactions	<Double>	Read-only	Tolerable transactions based on APDEX threshold (>T ;; <4T).
frustratingttlbtransactions	<Double>	Read-only	Frustrating transactions based on APDEX threshold (>4T).

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/lbvserver

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/lbvserver?
args=name:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>

Use this query-parameter to get lbvserver resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/lsngroup

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/lsngroup?
args=groupname:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_

Use this query-parameter to get lsngroup resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Network

Networking commands.

NAME	DESCRIPTION
Interface	Statistics for interface resource.
bridge	Statistics for bridge resource.
inat	Statistics for inbound nat resource.
inatsession	Statistics for stateful INAT resource.
mapbmr	Statistics for MAP-T Basic Mapping rule resource.
mapdomain	Statistics for MAP-T Map Domain resource.
nat64	Statistics for nat64 config resource.
rnat	Statistics for RNAT configured route resource.
rnat6	Statistics for IPv6 RNAT configured route resource.
rnatip	Statistics for RNAT ipaddress resource.
tunnelip	Statistics for TUNNEL Remote ipaddress resource.
tunnelip6	Statistics for TUNNEL Remote ip6address resource.
vlan	Statistics for "VLAN" resource.
vxlan	Statistics for "VXLAN" resource.

bridge

Statistics for bridge resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
tcptotbdgmacmoved	<Double>	Read-only	The number of times bridging registered MAC moved
tcpbdgmacmovedrate	<Double>	Read-only	Rate (/s) counter for tcptotbdgmacmoved
tcptotbdgcollisions	<Double>	Read-only	The number of bridging table collisions
tcpbdgcollisionsrate	<Double>	Read-only	Rate (/s) counter for tcptotbdgcollisions
tcperrbdgmuted	<Double>	Read-only	The number of bridging related interface mutes
tcperrbdgmutedrate	<Double>	Read-only	Rate (/s) counter for tcperrbdgmuted
totbdgpkts	<Double>	Read-only	The total number of bridged packets
bdgpktsrate	<Double>	Read-only	Rate (/s) counter for totbdgpkts
totbdgmbits	<Double>	Read-only	The total number of bridged Mbits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
bdgmbitsrate	<Double>	Read-only	Rate (/s) counter for totbdgmbits

Operations

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/bridge

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/bridge?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get bridge resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```

Interface

Statistics for interface resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
id	<String>	Read-write	Interface number, in C/U format, where C can take one of the following values: * 0 - Indicates a management interface. * 1 - Indicates a 1 Gbps port. * 10 - Indicates a 10 Gbps port. * LA - Indicates a link aggregation port. * LO - Indicates a loop back port. U is a unique integer for representing an interface in a particular port group.
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
curintfstate	<String>	Read-only	Current state of the specified interface. The interface state

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			set to UP only if the link state is UP and administrative state is ENABLED .
curlinkuptime	<String>	Read-only	Duration for which the link is UP. This statistic is reset when the state changes to DOWN.
curlinkdowntime	<String>	Read-only	Duration for which the link is DOWN. This statistic is reset when the state changes to UP.
totrxbytes	<Double>	Read-only	Number of bytes received by an interface since the Citrix ADC was started or the interface statistics were cleared.
rxbytesrate	<Double>	Read-only	Rate (/s) counter for totrxbytes
tottxbytes	<Double>	Read-only	Number of bytes transmitted by an interface since the Citrix ADC was started or the interface statistics were cleared.
txbytesrate	<Double>	Read-only	Rate (/s) counter for tottxbytes
totrxpkts	<Double>	Read-only	Number of packets received by an interface since the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Citrix ADC was started or the interface statistics were cleared.
rxpktsrate	<Double>	Read-only	Rate (/s) counter for totrxpkts
tottxpkts	<Double>	Read-only	Number of packets transmitted by an interface since the Citrix ADC was started or the interface statistics were cleared.
txpktsrate	<Double>	Read-only	Rate (/s) counter for tottxpkts
jumbopktsreceived	<Double>	Read-only	Number of Jumbo Packets received on this interface.
jumbopktsreceivedrate	<Double>	Read-only	Rate (/s) counter for jumbopktsreceived
jumbopktstransmitted	<Double>	Read-only	Number of Jumbo packets transmitted on this interface by upper layer, with TSO enabled actual trasmission size could be non Jumbo.
jumbopktstransmitteddrate	<Double>	Read-only	Rate (/s) counter for jumbopktstransmitted
trunkpktsreceived	<Double>	Read-only	Number of Tagged Packets received on this Trunk interface

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			through Allowed VLan List.
trunkpktsreceivedrate	<Double>	Read-only	Rate (/s) counter for trunkpktsreceived
trunkpktstransmitted	<Double>	Read-only	Number of Tagged Packets transmitted on this Trunk interface through Allowed VLan List.
trunkpktstransmittedrate	<Double>	Read-only	Rate (/s) counter for trunkpktstransmitted
nictotmulticastpkts	<Double>	Read-only	Number of multicast packets received by the specified interface since the Citrix ADC was started or the interface statistics were cleared.
nicmulticastpktsrate	<Double>	Read-only	Rate (/s) counter for nictotmulticastpkts
totnetscalerpkts	<Double>	Read-only	Number of packets, destined to the Citrix ADC, received by an interface since the Citrix ADC was started or the interface statistics were cleared. The packets destined to Citrix ADC are those that have the same MAC address as that of an interface or a VMAC address

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			owned by the Citrix ADC.
netscalerpktsrate	<Double>	Read-only	Rate (/s) counter for totnetscalerpkts
rxlacpdu	<Double>	Read-only	Number of Link Aggregation Control Protocol Data Units(LACPDUs) received by the specified interface since the Citrix ADC was started or the interface statistics were cleared.
rxlacpdurate	<Double>	Read-only	Rate (/s) counter for rxlacpdu
txlacpdu	<Double>	Read-only	Number of Link Aggregation Control Protocol Data Units(LACPDUs) transmitted by the specified interface since the Citrix ADC was started or the interface statistics were cleared.
txlacpdurate	<Double>	Read-only	Rate (/s) counter for txlacpdu
errpktrx	<Double>	Read-only	Number of inbound packets dropped by the hardware on a specified interface once the Citrix ADC starts or the interface statistics are cleared. This happens due to

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			following reasons: 1) The hardware receives packets at a rate higher rate than that at which the software is processing packets. In this case, the hardware FIFO overruns and starts dropping the packets . 2) The specified interface fails to receive inbound packets from the appliance because of insufficient memory. 3) The specified interface receives packets with CRC errors (Alignment or Frame Check Sequence). 4) The specified interface receives overly long packets. 5) The specified interface receives packets with alignment errors. 6) The software does less buffering because it is running out of available memory. When hardware detects that there is no space into which to push newly arrived packets, it starts dropping them. 7)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			The specified interface receives packets with Frame Check Sequence (FCS) errors. 8) The specified interface receives packets smaller than 64 bytes. 9) The specified interface discards error-free inbound packets because of insufficient resources. For example: NIC buffers. 10) Packets are missed because of collision detection, link lost, physical decoding error, or MAC abort.
errpktrxrate	<Double>	Read-only	Rate (/s) counter for errpktrx
errpkttx	<Double>	Read-only	Number of outbound packets dropped by the hardware on a specified interface since the Citrix ADC was started or the interface statistics were cleared. This could happen due to length (undersize or oversize) errors and lack of resources. This statistic is available only for: (1) Loop back interface

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			(LO) of all platforms. (2) All data ports on the Citrix ADC 12000 platform. (3) Management ports on the MPX 15000 and 17000 platforms.
errpkttxrate	<Double>	Read-only	Rate (/s) counter for errpkttx
errifindiscards	<Double>	Read-only	Number of error-free inbound packets discarded by the specified interface due to a lack of resources, for example, insufficient receive buffers.
errifindiscardsrate	<Double>	Read-only	Rate (/s) counter for errifindiscards
nicerrifoutdiscards	<Double>	Read-only	Number of error-free outbound packets discarded by the specified interface due to a lack of resources. This statistic is not available on: (1) 10G ports of Citrix ADC MPX 12500/12500/15500-10G platforms. (2) 10G data ports on Citrix ADC MPX 17500/19500/21500 platforms.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
nicerrifoutdiscardsrate	<Double>	Read-only	Rate (/s) counter for nicerrifoutdiscards
errdroppedrxpkts	<Double>	Read-only	Number of inbound packets dropped by the specified interface. Commonly dropped packets are multicast frames, spanning tree BPDUs, packets destined to a MAC not owned by the Citrix ADC when L2 mode is disabled, or packets tagged for a VLAN that is not bound to the interface. This statistic will increment in most healthy networks at a steady rate regardless of traffic load. If a sharp spike in dropped packets occurs, it generally indicates an issue with connected L2 switches, such as a forwarding database overflow resulting in packets being broadcast on all ports.
errdroppedrxpktsrate	<Double>	Read-only	Rate (/s) counter for errdroppedrxpkts

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
errdroppedtxpkts	<Double>	Read-only	Number of packets dropped in transmission by the specified interface due to one of the following reasons. (1) VLAN mismatch. (2) Oversized packets. (3) Interface congestion. (4) Loopback packets sent on non loop back interface.
errdroppedtxpktsrate	<Double>	Read-only	Rate (/s) counter for errdroppedtxpkts
errlinkhangs	<Double>	Read-only	Number of times the specified interface detected hangs in the transmit and receive paths since the Citrix ADC was started or the interface statistics were cleared.
nicstsstalls	<Double>	Read-only	Number of times the status updates for a specified interface were stalled since the Citrix ADC was started or the interface statistics were cleared. A status stall is detected when the status of the interface is not updated by the NIC hardware within 0.8

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			seconds of the last update.
nictxstalls	<Double>	Read-only	Number of times the interface stalled, when transmitting packets, since the Citrix ADC was started or the interface statistics were cleared. Transmit (Tx) stalls are detected when a packet posted for transmission is not transmitted in 4 seconds.
nicrxstalls	<Double>	Read-only	Number of times the interface stalled, when receiving packets, since the Citrix ADC was started or the interface statistics were cleared. Receive (Rx) stalls are detected when the following conditions are met: (1)The link is up for more than 10 minutes. (2)Packets are transmitted, but no packets is received for 16 seconds.
nicerrdisables	<Double>	Read-only	Number of times the specified interface is disabled by the Citrix

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ADC, due to continuous Receive (Rx) or Transmit (Tx) stalls, since the Citrix ADC was started or the interface statistics were cleared. The Citrix ADC disables an interface when one of the following conditions is met: (1) Three consecutive transmit stalls occurs with at most gap of 10 seconds between any two stalls. (2) Three consecutive receive stalls occurs with at most gap of 120 seconds between any two stalls.
errduplexmismatch	<Double>	Read-only	Number of times duplex mismatches were detected on the specified interface since the Citrix ADC was started or the interface statistics were cleared. A mismatch will occur if the duplex mode is not identically set on both ends of the link. This statistic is only available on the Citrix ADC Classic edition.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
linkreinits	<Double>	Read-only	Number of times the link has been re-initialized. A re-initialization occurs due to link state change, configuration parameter change, or administrative reset operation.
totmacmoved	<Double>	Read-only	Number of MAC moves between ports. If a high rate of MAC moves is observed, it is likely that there is a bridge loop between two interfaces.
macmovedrate	<Double>	Read-only	Rate (/s) counter for totmacmoved
errnicmuted	<Double>	Read-only	Number of times the specified interface stopped transmitting and receiving packets due to MAC moves between ports.
rxcrcerrors	<Double>	Read-only	Number of packets received with the wrong checksum by the specified interface since the Citrix ADC was started or the interface statistics were cleared. This indicates the number

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			of Jabber frames received instead of CRC errors on the 10G data ports of Citrix ADC 12000-10G platform and the data ports of Citrix ADC MPX 15000 and 17000 platforms.
rxcrcerrorsrate	<Double>	Read-only	Rate (/s) counter for rxcrcerrors
interfacealias	<String>	Read-only	Alias Name for the Interface
curlinkstate	<String>	Read-only	The current state of the link associated with the interface. For logical interfaces (LA), the state of the link is dependent on the state of the slave interfaces. For the link to be UP at least one of the slave interfaces needs to be UP.

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

bmrv4txpktsicmprate	<Double>	Read-only	Rate (/s) counter for bmrtotv4txpktsicmp

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/mapbmr

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/mapbmr?
args=name:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>

Use this query-parameter to get mapbmr resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/tunnelip

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/tunnelip?
args=tunnelip:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_valu

Use this query-parameter to get tunnelip resources based on additional properties.

HTTP Method:GET

Request Headers:

ns

Statistics for ns.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
rescpuusagepcnt	<Double>	Read-only	Average CPU utilization percentage. Not applicable for a single-CPU system.
cpuusagepcnt	<Double>	Read-only	CPU utilization percentage.
cachemaxmemorykb	<Double>	Read-only	Largest amount of memory the Citrix ADC can dedicate to caching, up to 50% of available memory. A 0 value disables caching, but the caching module continues to run.
delcmpratio	<Double>	Read-only	Ratio of compressible data received to compressed data

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			transmitted.If this ratio is one (uncmp:1.0) that means compression is disabled or we are not able to compress even a single compressible packet.
rescpuusage	<Double>	Read-only	Shows average CPU utilization percentage if more than 1 CPU is present.
cpuusage	<Double>	Read-only	CPU utilization percentage.
resmemusage	<Double>	Read-only	Percentage of memory utilization on Citrix ADC.
comptotaldatacompressionratio	<Double>	Read-only	Ratio of total HTTP data received to total HTTP data transmitted.
compratio	<Double>	Read-only	Ratio of the compressible data received from the server to the compressed data sent to the client.
cacheutilizedmemorykb	<Double>	Read-only	Amount of memory the integrated cache is currently using.
cachemaxmemoryactivekb	<Double>	Read-only	Currently active value of maximum memory

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cache64maxmemorykb	<Double>	Read-only	Largest amount of memory the Citrix ADC can dedicate to caching, up to 50% of available memory. A 0 value disables caching, but the caching module continues to run.
cachepercentoriginbandwidthsaved	<Double>	Read-only	Percentage of origin bandwidth saved, expressed as number of bytes served from the integrated cache divided by all bytes served. The assumption is that all compression is done in the Citrix ADC.
cachetotmisses	<Double>	Read-only	Intercepted HTTP requests requiring fetches from origin server.
cachemissesrate	<Double>	Read-only	Rate (/s) counter for cachetotmisses
cachetothits	<Double>	Read-only	Responses served from the integrated cache. These responses match a policy with a CACHE action.
cachehitsrate	<Double>	Read-only	Rate (/s) counter for cachetothits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslnumcardsup	<Double>	Read-only	Number of SSL cards that are UP. If the number of cards UP is lower than a threshold, a failover is initiated.
memusagepcnt	<Double>	Read-only	Percentage of memory utilization on Citrix ADC.
memuseinmb	<Double>	Read-only	Main memory currently in use, in megabytes.
mgmtcpuusagepcnt	<Double>	Read-only	Average Management CPU utilization percentage.
pktcpuusagepcnt	<Double>	Read-only	Average CPU utilization percentage for all packet engines excluding management PE.
starttime	<String>	Read-only	Time when the Citrix ADC was last started.
transtime	<String>	Read-only	Time when the last master state transition occurred. You can use this statistic for debugging.
hacurstate	<String>	Read-only	State of the HA node, based on its health, in a high availability setup.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Possible values are: UP - Indicates that the node is accessible and can function as either a primary or secondary node. DISABLED - Indicates that the high availability status of the node has been manually disabled. Synchronization and propagation cannot take place between the peer nodes. INIT - Indicates that the node is in the process of becoming part of the high availability configuration. PARTIALFAIL - Indicates that one of the high availability monitored interfaces has failed because of a card or link failure. This state triggers a failover. COMPLETEFAIL - Indicates that all the interfaces of the node are unusable, because the interfaces on which high availability monitoring is enabled are not connected or are manually disabled.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			This state triggers a failover. DUMB - Indicates that the node is in listening mode. It does not participate in high availability transitions or transfer configuration from the peer node. This is a configured value, not a statistic. PARTIALFAILSSL - Indicates that the SSL card has failed. This state triggers a failover. ROUTEMONITORFAIL - Indicates that the route monitor has failed. This state triggers a failover.
hacurmasterstate	<String>	Read-only	Indicates the high availability state of the node. Possible values are: STAYSECONDARY - Indicates that the selected node remains the secondary node in a high availability setup. In this case a forced failover does not change the state but, instead, returns an appropriate error message. This is a configured value and not a statistic.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			PRIMARY - Indicates that the selected node is the primary node in a high availability setup. SECONDARY - Indicates that the selected node is the secondary node in a high availability setup. CLAIMING - Indicates that the secondary node is in the process of taking over as the primary node. This is the intermediate state in the transition of the secondary node to primary status. FORCE CHANGE - Indicates that the secondary node is forcibly changing its status to primary due to a forced failover issued on the secondary node.
sslcards	<Double>	Read-only	Number of SSL crypto cards present on the Citrix ADC.
disk0perusage	<Double>	Read-only	Used space in /flash partition of the disk, as a percentage. This is a critical counter. You can configure /flash Used (%) by using the Set snmp alarm DISK-

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			USAGE-HIGH command.
disk1perusage	<Double>	Read-only	Used space in /var partition of the disk, as a percentage. This is a critical counter. You can configure /var Used (%) by using the Set snmp alarm DISK-USAGE-HIGH command.
disk0avail	<Double>	Read-only	Available space in /flash partition of the hard disk.
disk1avail	<Double>	Read-only	Available space in /var partition of the hard disk.
totrxmbits	<Double>	Read-only	Number of megabytes received by the Citrix ADC.
rxmbitsrate	<Double>	Read-only	Rate (/s) counter for totrxmbits
tottxmbits	<Double>	Read-only	Number of megabytes transmitted by the Citrix ADC.
txmbitsrate	<Double>	Read-only	Rate (/s) counter for tottxmbits
tcpcurclientconn	<Double>	Read-only	Client connections, including connections in the Opening,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Established, and Closing state.
tcpcurclientconnestablished	<Double>	Read-only	Current client connections in the Established state, which indicates that data transfer can occur between the Citrix ADC and the client.
tcpcurserverconn	<Double>	Read-only	Server connections, including connections in the Opening, Established, and Closing state.
tcpcurserverconnestablished	<Double>	Read-only	Current server connections in the Established state, which indicates that data transfer can occur between the Citrix ADC and the server.
httptotrequests	<Double>	Read-only	Total number of HTTP requests received.
httprequestsrate	<Double>	Read-only	Rate (/s) counter for httptotrequests
httptotresponses	<Double>	Read-only	Total number of HTTP responses sent.
httpresponsesrate	<Double>	Read-only	Rate (/s) counter for httptotresponses

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httptotrxrequestbytes	<Double>	Read-only	Total number of bytes of HTTP request data received.
httprxrequestbytesrate	<Double>	Read-only	Rate (/s) counter for httptotrxrequestbytes
httptotrxresponsebytes	<Double>	Read-only	Total number of bytes of HTTP response data received.
httprxresponsebytesrate	<Double>	Read-only	Rate (/s) counter for httptotrxresponsebytes
ssltottransactions	<Double>	Read-only	Number of SSL transactions on the Citrix ADC
ssltransactionsrate	<Double>	Read-only	Rate (/s) counter for ssltottransactions
ssltotsessionhits	<Double>	Read-only	Number of SSL session reuse hits on the Citrix ADC.
sslsessionhitsrate	<Double>	Read-only	Rate (/s) counter for ssltotsessionhits
appfirewallrequests	<Double>	Read-only	HTTP/HTTPS requests sent to your protected web servers via the Application Firewall.
appfirewallrequestsrate	<Double>	Read-only	Rate (/s) counter for appfirewallrequests

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
appfirewallresponses	<Double>	Read-only	HTTP/HTTPS responses sent by your protected web servers via the Application Firewall.
appfirewallresponses rate	<Double>	Read-only	Rate (/s) counter for appfirewallresponses
appfirewallaborts	<Double>	Read-only	Incomplete HTTP/ HTTPS requests aborted by the client before the Application Firewall could finish processing them.
appfirewallabortsrate	<Double>	Read-only	Rate (/s) counter for appfirewallaborts
appfirewallredirects	<Double>	Read-only	HTTP/HTTPS requests redirected by the Application Firewall to a different Web page or web server. (HTTP 302)
appfirewallredirectsr ate	<Double>	Read-only	Rate (/s) counter for appfirewallredirects
misccounter0	<Double>	Read-only	Miscellaneous Counter 0.
misccounter1	<Double>	Read-only	Miscellaneous Counter 1.
numcpus	<Double>	Read-only	The number of CPUs on the Citrix ADC.

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:` *

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

nsacl

Statistics for ACL entry resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
aclname	<String>	Read-write	Name of the extended ACL rule whose statistics you want the Citrix ADC to display. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
acltotpktsbridged	<Double>	Read-only	Packets matching a bridge ACL, which is in transparent mode and bypasses service processing.
aclpktsbridgedrate	<Double>	Read-only	Rate (/s) counter for acltotpktsbridged
acltotpktsdenied	<Double>	Read-only	Packets dropped because they match ACLs with processing mode set to DENY.
aclpktsdeniedrate	<Double>	Read-only	Rate (/s) counter for acltotpktsdenied
acltotpktsallowed	<Double>	Read-only	Packets matching ACLs with processing mode set to ALLOW. Citrix ADC processes these packets.
aclpktsallowedrate	<Double>	Read-only	Rate (/s) counter for acltotpktsallowed
acltotpktsnat	<Double>	Read-only	Packets matching a NAT ACL, resulting in a NAT session.
aclpktsnatrate	<Double>	Read-only	Rate (/s) counter for acltotpktsnat
acltothits	<Double>	Read-only	Packets matching an ACL.
aclhitsrate	<Double>	Read-only	Rate (/s) counter for acltothits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
acltotmisses	<Double>	Read-only	Packets not matching any ACL.
aclmissesrate	<Double>	Read-only	Rate (/s) counter for acltotmisses
acltotcount	<Double>	Read-only	Total number of ACL rules configured.
dfdacltothits	<Double>	Read-only	Packets matching an dfd ACL.
dfdaclhitsrate	<Double>	Read-only	Rate (/s) counter for dfdacltothits
dfdacltotmisses	<Double>	Read-only	Packets not matching any DFD ACL.
dfdaclmissesrate	<Double>	Read-only	Rate (/s) counter for dfdacltotmisses
dfdacltotcount	<Double>	Read-only	Total number of DFD ACL rules configured.
aclperhits	<Double>	Read-only	Number of times the acl was hit
aclperhitsrate	<Double>	Read-only	Rate (/s) counter for aclperhits

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/nsacl

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the PBR whose statistics you want the Citrix ADC to display. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pbrtotpktsallowed	<Double>	Read-only	Total packets that matched the PBR (Policy-Based Routes) with action ALLOW
pbrpktsallowedrate	<Double>	Read-only	Rate (/s) counter for pbrtotpktsallowed
pbrtotpktsdenied	<Double>	Read-only	Total packets that matched the PBR with action DENY
pbrpktsdeniedrate	<Double>	Read-only	Rate (/s) counter for pbrtotpktsdenied
pbrtothits	<Double>	Read-only	Total packets that matched one of the configured PBR
pbrhitsrate	<Double>	Read-only	Rate (/s) counter for pbrtothits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pbrtotmisses	<Double>	Read-only	Total packets that did not match any PBR
pbrmissesrate	<Double>	Read-only	Rate (/s) counter for pbrtotmisses
pbrtotnulldrop	<Double>	Read-only	Total packets that are dropped due to null nexthop
pbrnulldroprate	<Double>	Read-only	Rate (/s) counter for pbrtotnulldrop
pbrperhits	<Double>	Read-only	Number of times the pbr was hit
pbrperhitsrate	<Double>	Read-only	Rate (/s) counter for pbrperhits

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/nspbr

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/nspbr?
args=name:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>

Use this query-parameter to get nspbr resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```

nssimpleacl

Statistics for simple ACL resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
sacltothits	<Double>	Read-only	Packets matching a SimpleACL.
saclhitsrate	<Double>	Read-only	Rate (/s) counter for sacltothits
sacltotmisses	<Double>	Read-only	Packets not matching any SimpleACL.
saclmissesrate	<Double>	Read-only	Rate (/s) counter for sacltotmisses
saclscount	<Double>	Read-only	Number of SimpleACLs configured.
sacltotpktsallowed	<Double>	Read-only	Total packets that matched a SimpleACL with action ALLOW and got consumed by Citrix ADC.
saclpktsallowedrate	<Double>	Read-only	Rate (/s) counter for sacltotpktsallowed
sacltotpktsbridged	<Double>	Read-only	Total packets that matched a SimpleACL with action BRIDGE and got bridged by Citrix ADC.
saclpktsbridgedrate	<Double>	Read-only	Rate (/s) counter for sacltotpktsbridged

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sacltotpktsdenied	<Double>	Read-only	Packets dropped because they match SimpleACL (Access Control List) with processing mode set to DENY.
saclpktsdeniedrate	<Double>	Read-only	Rate (/s) counter for sacltotpktsdenied

Pcp

Port Control Protocol statistics.

NAME	DESCRIPTION
pcpserver	Statistics for server resource.

pcpserver

Statistics for server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	PCP Statistics per Server.
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pcptotrequests	<Double>	Read-only	PCP Request received.
pcprequestsrate	<Double>	Read-only	Rate (/s) counter for pcptotrequests
pcptotresponses	<Double>	Read-only	Number PCP responces sent.
pcpresponsesrate	<Double>	Read-only	Rate (/s) counter for pcptotresponses
pcptotmaprequests	<Double>	Read-only	PCP MAP Requests received.
pcpmaprequestsrate	<Double>	Read-only	Rate (/s) counter for pcptotmaprequests
pcptotpeerrequests	<Double>	Read-only	PCP PEER Requests received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pcppeerrequestsrate	<Double>	Read-only	Rate (/s) counter for pcptotpeerrequests
pcptoterrinrquest	<Double>	Read-only	total PCP request with error.
pcperrinrquestrate	<Double>	Read-only	Rate (/s) counter for pcptoterrinrquest
pcptoterrinres	<Double>	Read-only	Total PCP responses with errors.
pcperrinresrate	<Double>	Read-only	Rate (/s) counter for pcptoterrinres
pcptotunsuppvers	<Double>	Read-only	PCP request with unsupported version.
pcpunsuppversrate	<Double>	Read-only	Rate (/s) counter for pcptotunsuppvers
pcptotmalformedreq	<Double>	Read-only	total PCP request having malformed PCP packets.
pcpmalformedreqrate	<Double>	Read-only	Rate (/s) counter for pcptotmalformedreq
pcptotunsuppopcode	<Double>	Read-only	total Unsupproted OPCODES received Requests.
pcpunsuppopcoderate	<Double>	Read-only	Rate (/s) counter for pcptotunsuppopcode
pcptotunsuppoption	<Double>	Read-only	total Unsupproted OPTIONS received in requests.
pcpunsuppoptionrate	<Double>	Read-only	Rate (/s) counter for pcptotunsuppoption

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pcptotmalformedoption	<Double>	Read-only	total malformed OPTIONS received in requests.
pcpmalformedoptionrate	<Double>	Read-only	Rate (/s) counter for pcptotmalformedoption
pcptotnetfailure	<Double>	Read-only	Total Network Failures.
pcpnetfailurerate	<Double>	Read-only	Rate (/s) counter for pcptotnetfailure
pcptotnoresources	<Double>	Read-only	no resources
pcpnoresourcesrate	<Double>	Read-only	Rate (/s) counter for pcptotnoresources
pcptotunsupportedprotocol	<Double>	Read-only	Total Unsupported Protocols requests.
pcpunsupportedprotocolrate	<Double>	Read-only	Rate (/s) counter for pcptotunsupportedprotocol
pcptotuserexqouta	<Double>	Read-only	Total user ex quota.
pcpuserexqoutarate	<Double>	Read-only	Rate (/s) counter for pcptotuserexqouta
pcptotnoexternal	<Double>	Read-only	Total responses with opcode can not provide external.
pcpnoexternalrate	<Double>	Read-only	Rate (/s) counter for pcptotnoexternal
pcptotaddrmismatch	<Double>	Read-only	Total address mismatch.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pcpaddrmismatchrate	<Double>	Read-only	Rate (/s) counter for pcptotaddrmismatch
pcptotexcesspeers	<Double>	Read-only	Total responses with opcode excessive remote peers.
pcpexcesspeersrate	<Double>	Read-only	Rate (/s) counter for pcptotexcesspeers

Priority Queuing

Priority Queuing statistics. Priority Queuing ensures that key customer web sites get the timely responses they need. System provides priority-based queuing, which provides different levels of service to customers.

NAME	DESCRIPTION
pq	Statistics for pq.
pqpolicy	Statistics for PQ policy resource.

pq

Statistics for pq.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
pqtotalpolicymatches	<Double>	Read-only	Number of times the Citrix ADC matched an incoming request using any priority queuing policy.
pqpolicymatchesrate	<Double>	Read-only	Rate (/s) counter for pqtotalpolicymatches
pqtotalthresholdfailed	<Double>	Read-only	Number of times the Citrix ADC failed to match an incoming request to any of priority queing policy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
pqthresholdfailedrate	<Double>	Read-only	Rate (/s) counter for pqtotalthresholdfailed
pqpriority1requests	<Double>	Read-only	Number of priority 1 requests that the Citrix ADC received.
pqpriority1requestsrate	<Double>	Read-only	Rate (/s) counter for pqpriority1requests
pqpriority2requests	<Double>	Read-only	Number of priority 2 requests that the Citrix ADC received.
pqpriority2requestsrate	<Double>	Read-only	Rate (/s) counter for pqpriority2requests
pqpriority3requests	<Double>	Read-only	Number of priority 3 requests that the Citrix ADC received.
pqpriority3requestsrate	<Double>	Read-only	Rate (/s) counter for pqpriority3requests

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

Statistics for HTTP resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
spdytotstreams	<Double>	Read-only	Total number of requests received over SPDYv2 and SPDYv3
spdystreamsrate	<Double>	Read-only	Rate (/s) counter for spdytotstreams
httptotrequests	<Double>	Read-only	Total number of HTTP requests received.
httprequestsrate	<Double>	Read-only	Rate (/s) counter for httptotrequests
httptotresponses	<Double>	Read-only	Total number of HTTP responses sent.
httpresponsesrate	<Double>	Read-only	Rate (/s) counter for httptotresponses
httptotrxrequestbytes	<Double>	Read-only	Total number of bytes of HTTP request data received.
httprxrequestbytesrate	<Double>	Read-only	Rate (/s) counter for httptotrxrequestbytes
httptotrxresponsebytes	<Double>	Read-only	Total number of bytes of HTTP response data received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httprxresponsebytesrate	<Double>	Read-only	Rate (/s) counter for httptotrxresponsebytes
httptotgets	<Double>	Read-only	Total number of HTTP requests received with the GET method.
httpgetsrate	<Double>	Read-only	Rate (/s) counter for httptotgets
httptotposts	<Double>	Read-only	Total number of HTTP requests received with the POST method.
httppostsrate	<Double>	Read-only	Rate (/s) counter for httptotposts
httptotothers	<Double>	Read-only	Total number of HTTP requests received with methods other than GET and POST. Some of the other well-defined HTTP methods are HEAD, PUT, DELETE, OPTIONS, and TRACE. User-defined methods are also allowed.
httptohersrate	<Double>	Read-only	Rate (/s) counter for httptotothers
httptot10requests	<Double>	Read-only	Total number of HTTP/1.0 requests received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
http10requestsrate	<Double>	Read-only	Rate (/s) counter for httptot10requests
httptot11requests	<Double>	Read-only	Total number of HTTP/1.1 requests received.
http11requestsrate	<Double>	Read-only	Rate (/s) counter for httptot11requests
httptotclenrequests	<Double>	Read-only	Total number of HTTP requests in which the Content-length field of the HTTP header has been set. Content-length specifies the length of the content, in bytes, in the associated HTTP body.
httpclenrequestsrate	<Double>	Read-only	Rate (/s) counter for httptotclenrequests
httptotchunkedrequests	<Double>	Read-only	Total number of HTTP requests in which the Transfer-Encoding field of the HTTP header has been set to chunked.
httpchunkedrequestsrate	<Double>	Read-only	Rate (/s) counter for httptotchunkedrequests
httptottxrequestbytes	<Double>	Read-only	Total number of bytes of HTTP request data transmitted.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httptxrequestbytesrate	<Double>	Read-only	Rate (/s) counter for httptottxrequestbytes
httptot10responses	<Double>	Read-only	Total number of HTTP/1.0 responses sent.
http10responsesrate	<Double>	Read-only	Rate (/s) counter for httptot10responses
httptot11responses	<Double>	Read-only	Total number of HTTP/1.1 responses sent.
http11responsesrate	<Double>	Read-only	Rate (/s) counter for httptot11responses
httptotclenresponses	<Double>	Read-only	Total number of HTTP responses sent in which the Content-length field of the HTTP header has been set. Content-length specifies the length of the content, in bytes, in the associated HTTP body.
httpclenresponsesrate	<Double>	Read-only	Rate (/s) counter for httptotclenresponses
httptotchunkedresponses	<Double>	Read-only	Total number of HTTP responses sent in which the Transfer-Encoding field of the HTTP header has been set to chunked. This setting is used when

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the server wants to start sending the response before knowing its total length. The server breaks the response into chunks and sends them in sequence, inserting the length of each chunk before the actual data. The message ends with a chunk of size zero.
httpchunkedrespons esrate	<Double>	Read-only	Rate (/s) counter for httptotchunkedrespo nses
httperrnoreusemultip art	<Double>	Read-only	Total number of HTTP multi-part responses sent. In multi-part responses, one or more entities are encapsulated within the body of a single message.
httperrnoreusemultip artrate	<Double>	Read-only	Rate (/s) counter for httperrnoreusemultip art
httptotnoclenchunkre sponses	<Double>	Read-only	Total number of FIN-terminated responses sent. In FIN-terminated responses, the server finishes sending the data and closes the connection.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httpnoclenchunkresponsesrate	<Double>	Read-only	Rate (/s) counter for httptotnoclenchunkresponses
httptottxresponsebytes	<Double>	Read-only	Total number of bytes of HTTP response data transmitted.
httptxresponsebytesrate	<Double>	Read-only	Rate (/s) counter for httptottxresponsebytes
httperrincompleteheaders	<Double>	Read-only	Total number of HTTP requests and responses received in which the HTTP header spans more than one packet.
httperrincompletereq uests	<Double>	Read-only	Total number of HTTP requests received in which the header spans more than one packet.
httperrincompletereq uestsrate	<Double>	Read-only	Rate (/s) counter for httperrincompletereq uests
httperrincompleteres ponses	<Double>	Read-only	Total number of HTTP responses received in which the header spans more than one packet.
httperrincompleteres ponsesrate	<Double>	Read-only	Rate (/s) counter for httperrincompleteres ponses

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
httperrserverbusy	<Double>	Read-only	Total number of HTTP error responses received. Some of the error responses are: 500 Internal Server Error 501 Not Implemented 502 Bad Gateway 503 Service Unavailable 504 Gateway Timeout 505 HTTP Version Not Supported
httperrserverbusyrate	<Double>	Read-only	Rate (/s) counter for httperrserverbusy
httperrlargecontent	<Double>	Read-only	Total number of requests and responses received with large body.
httperrlargechunk	<Double>	Read-only	Total number of requests received with large chunk size, in which the Transfer-Encoding field of the HTTP header has been set to chunked.
httperrlargectlen	<Double>	Read-only	Total number of requests received with large content, in which the Content-length field of the HTTP header has been set. Content-length specifies the length of the content,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			in bytes, in the associated HTTP body.
spdyv2totstreams	<Double>	Read-only	Total number of requests received over SPDYv2
spdyv2streamsrate	<Double>	Read-only	Rate (/s) counter for spdyv2totstreams
spdyv3totstreams	<Double>	Read-only	Total number of requests received over SPDYv3
spdyv3streamsrate	<Double>	Read-only	Rate (/s) counter for spdyv3totstreams

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

icmptotthresholdexceeds	<Double>	Read-only	Times the ICMP rate threshold is exceeded. If this

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			counter continuously increases, first make sure the ICMP packets received are genuine. If they are, increase the current rate threshold.
icmptotpktsdropped	<Double>	Read-only	ICMP packets dropped because the rate threshold has been exceeded.
icmptotbadchecksum	<Double>	Read-only	ICMP Fragmentation Needed error messages received with an ICMP checksum error.
icmptotnonfirstipfrag	<Double>	Read-only	ICMP Fragmentation Needed error messages received that were generated by an IP fragment other than the first one.
icmptotinvalidbodylen	<Double>	Read-only	ICMP Fragmentation Needed error messages received that specified an invalid body length.
icmptotnotcpconn	<Double>	Read-only	ICMP Need Fragmentation error messages received for TCP packets. The state of the connection for these packets is not

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			maintained on the Citrix ADC.
icmptotnoudpconn	<Double>	Read-only	ICMP Need Fragmentation error messages received for UDP packets. The state of the connection for these packets is not maintained on the Citrix ADC.
icmptotinvalidtcpseqno	<Double>	Read-only	ICMP Fragmentation Needed error messages received for packets that contain an invalid TCP address.
icmptotinvalidnextmtuval	<Double>	Read-only	ICMP Fragmentation Needed error messages received in which the Maximum Transmission Unit (MTU) for the next hop is out of range. The range for the MTU is 576-1500.
icmptotbignextmtu	<Double>	Read-only	ICMP Fragmentation Needed error messages received in which the value for the next MTU is higher than that of the current MTU.
icmptotinvalidprotocol	<Double>	Read-only	ICMP Fragmentation Needed error messages received

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			that contain a protocol other than TCP and UDP.
icmptotbadpmtuipchecksum	<Double>	Read-only	ICMP Fragmentation Needed error messages received with an IP checksum error.
icmptotpmtunolink	<Double>	Read-only	ICMP Fragmentation Needed error messages received on a Protocol Control Block (PCB) with no link. The PCB maintains the state of the connection.
icmptotpmtudiscoverydisabled	<Double>	Read-only	ICMP Need Fragmentation error messages received when the PMTU Discovery mode is not enabled.

Operations

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/protocolicmp

icmpv6tottxpkts	<Double>	Read-only	ICMPv6 packets transmitted.
icmpv6txpktsrate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxpkts
icmpv6tottxbytes	<Double>	Read-only	Bytes of ICMPv6 data transmitted.
icmpv6txbytesrate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxbytes
icmpv6totrxna	<Double>	Read-only	ICMPv6 neighbor advertisement packets received. These packets are received in response to a neighbor solicitation message sent out by this node, or if the link layer address of a neighbor has changed.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
icmpv6rxnarate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxna
icmpv6totrxns	<Double>	Read-only	ICMPv6 neighbor solicitation packets received. These packets are received if the link layer address of a neighbor has changed, or in response to a neighbor solicitation message sent out by this node.
icmpv6rxnsrate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxns
icmpv6totrxra	<Double>	Read-only	ICMPv6 router advertisement packets received. These are received at defined intervals or in response to a router solicitation message.
icmpv6rxrarate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxra
icmpv6totrxrs	<Double>	Read-only	ICMPv6 router solicitation packets received. These could be sent by a neighboring router to initiate address resolution.
icmpv6rxrsrate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxrs

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
icmpv6totrxechoreq	<Double>	Read-only	ICMPv6 Ping Echo Request packets received.
icmpv6rxechoreqrate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxechoreq
icmpv6totrxechoreply	<Double>	Read-only	ICMPv6 Ping Echo Reply packets received.
icmpv6rxechoreplyrate	<Double>	Read-only	Rate (/s) counter for icmpv6totrxechoreply
icmpv6tottxna	<Double>	Read-only	ICMPv6 neighbor advertisement packets transmitted. These packets are sent in response to a neighbor solicitation packet, or if the link layer address of this node has changed.
icmpv6txnarate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxna
icmpv6tottxns	<Double>	Read-only	ICMPv6 neighbor solicitation packets transmitted. These packets are sent to get the link layer addresses of neighboring nodes or to confirm that they are reachable.
icmpv6txnsrate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxns

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
icmpv6tottxra	<Double>	Read-only	ICMPv6 router advertisement packets transmitted. These packets are sent at regular intervals or in response to a router solicitation packet from a neighbor.
icmpv6txrarate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxra
icmpv6tottxrs	<Double>	Read-only	ICMPv6 router solicitation packets transmitted. These packets are sent to request neighboring routers to generate router advertisements immediately rather than wait for the next defined time.
icmpv6txrsrate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxrs
icmpv6tottxechoreq	<Double>	Read-only	ICMPv6 Ping Echo Request packets transmitted.
icmpv6txechoreqrate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxechoreq
icmpv6tottxechoreply	<Double>	Read-only	ICMP Ping Echo Reply packets transmitted.
icmpv6txechoreplyrate	<Double>	Read-only	Rate (/s) counter for icmpv6tottxechoreply

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
icmpv6errra	<Double>	Read-only	ICMPv6 router advertisement error packets received that contain an error in the header, such as an incorrect source IP address, destination IP address, or packet length.
icmpv6errna	<Double>	Read-only	ICMPv6 neighbor advertisement error packets received that contain an error in the header, such as an incorrect source IP address, destination IP address, or packet length.
icmpv6errns	<Double>	Read-only	ICMPv6 neighbor solicitation error packets received that contain an error in the header, such as an incorrect source IP address, destination IP address, or packet length.
icmpv6badchecksums	<Double>	Read-only	Packets received with an ICMPv6 checksum error.
icmpv6unspt	<Double>	Read-only	ICMPv6 packets received that are not supported by the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
icmpv6rtthsld	<Double>	Read-only	Packets dropped because the default threshold of 100 requests per 10 milliseconds has been exceeded. This is a configurable value using the set rateControl command.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
iptotrxpkts	<Double>	Read-only	IP packets received.
iprxpktsrate	<Double>	Read-only	Rate (/s) counter for iptotrxpkts
iptotrxbytes	<Double>	Read-only	Bytes of IP data received.
iprxbytesrate	<Double>	Read-only	Rate (/s) counter for iptotrxbytes
iptottxpkts	<Double>	Read-only	IP packets transmitted.
iptxpktsrate	<Double>	Read-only	Rate (/s) counter for iptottxpkts
iptottxbytes	<Double>	Read-only	Bytes of IP data transmitted.
iptxbytesrate	<Double>	Read-only	Rate (/s) counter for iptottxbytes
iptotrxmbits	<Double>	Read-only	Megabits of IP data received.
iprxmbitsrate	<Double>	Read-only	Rate (/s) counter for iptotrxmbits
iptottxmbits	<Double>	Read-only	Megabits of IP data transmitted.
iptxmbitsrate	<Double>	Read-only	Rate (/s) counter for iptottxmbits
iptotroutedpkts	<Double>	Read-only	Total routed packets.
iproutedpktsrate	<Double>	Read-only	Rate (/s) counter for iptotroutedpkts
iptotroutedmbits	<Double>	Read-only	Total routed Mbits

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
iproutedmbitsrate	<Double>	Read-only	Rate (/s) counter for iptotroutedmbits
iptotfragments	<Double>	Read-only	IP fragments received.
iptotsuccreassembly	<Double>	Read-only	Fragmented IP packets successfully reassembled on the Citrix ADC.
iptotreassemblyattempt	<Double>	Read-only	IP packets that the Citrix ADC attempts to reassemble. If one of the fragments is missing, the whole packet is dropped.
iptotaddrlookup	<Double>	Read-only	IP address lookups performed by the Citrix ADC. When a packet is received on a non-established session, the Citrix ADC checks if the destination IP address is one of the Citrix ADC owned IP addresses.
iptotaddrlookupfail	<Double>	Read-only	IP address lookups performed by the Citrix ADC that have failed because the destination IP address of the packet does not match any of the Citrix ADC owned IP addresses.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
iptotudpfragmentsfwd	<Double>	Read-only	UDP fragments forwarded to the client or the server.
iptottcpfragmentsfwd	<Double>	Read-only	TCP fragments forwarded to the client or the server.
iptotfragpktsgen	<Double>	Read-only	Fragmented packets created by the Citrix ADC.
iptotbadchecksums	<Double>	Read-only	Packets received with an IP checksum error.
iptotunsuccreassembly	<Double>	Read-only	Packets received that could not be reassembled. This can occur when there is a checksum failure, an identification field mismatch, or when one of the fragments is missing.
iptottoobig	<Double>	Read-only	Packets received for which the reassembled data exceeds the Ethernet packet data length of 1500 bytes.
iptotzerofragmentlen	<Double>	Read-only	Packets received with a fragment length of 0 bytes.
iptotdupfragments	<Double>	Read-only	Duplicate IP fragments received. This can occur when

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			the acknowledgement was not received within the expected time.
iptotoutoforderfrag	<Double>	Read-only	Fragments received that are out of order.
iptotunknowndstrcvd	<Double>	Read-only	Packets received in which the destination IP address was not reachable or not owned by the Citrix ADC.
iptotbadtransport	<Double>	Read-only	Packets received in which the protocol specified in the IP header is unknown to the Citrix ADC.
iptotvipdown	<Double>	Read-only	Packets received for which the VIP is down. This can occur when all the services bound to the VIP are down or the VIP is manually disabled.
iptotfixheaderfail	<Double>	Read-only	Packets received that contain an error in one or more components of the IP header.
iptotttlexpired	<Double>	Read-only	Packets for which the time-to-live (TTL) expired during transit. These packets are dropped.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
iptotmaxclients	<Double>	Read-only	Attempts to open a new connection to a service for which the maximum limit has been exceeded. Default value, 0, applies no limit.
iptotunknownsvcs	<Double>	Read-only	Packets received on a port or service that is not configured.
iptotlandattacks	<Double>	Read-only	Land-attack packets received. The source and destination addresses are the same.
iptotinvalidheadersz	<Double>	Read-only	Packets received in which an invalid data length is specified, or the value in the length field and the actual data length do not match. The range for the Ethernet packet data length is 0-1500 bytes.
iptotinvalidpacketsize	<Double>	Read-only	Total number of packets received by Citrix ADC with invalid IP packet size.
iptottruncatedpackets	<Double>	Read-only	Truncated IP packets received. An overflow in the routers along the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			path can truncate IP packets.
noniptottruncatedpackets	<Double>	Read-only	Truncated non-IP packets received.
iptotzeronexthop	<Double>	Read-only	Packets received that contain a 0 value in the next hop field. These packets are dropped.
iptotbadlens	<Double>	Read-only	Packets received with a length greater than the normal maximum transmission unit of 1514 bytes.
iptotbadmacaddrs	<Double>	Read-only	IP packets transmitted with a bad MAC address.

Operations

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			by Citrix ADC (OBSOLETE).
ipv6icmprarxrate	<Double>	Read-only	Rate (/s) counter for ipv6toticmprarx
ipv6toticmprstx	<Double>	Read-only	Number of ICMPv6 RS packets transmitted by Citrix ADC (OBSOLETE).
ipv6icmprstxrate	<Double>	Read-only	Rate (/s) counter for ipv6toticmprstx
ipv6toticmprx	<Double>	Read-only	Number of ICMPv6 packets received by Citrix ADC (OBSOLETE).
ipv6icmprxrate	<Double>	Read-only	Rate (/s) counter for ipv6toticmprx
ipv6toticmptx	<Double>	Read-only	Number of ICMPv6 packets transmitted by Citrix ADC (OBSOLETE).
ipv6icmptxrate	<Double>	Read-only	Rate (/s) counter for ipv6toticmptx
ipv6errrxhdr	<Double>	Read-only	Number of erroneous header packets received (OBSOLETE).
ipv6errrxpkt	<Double>	Read-only	Number of erroneous packets received (OBSOLETE).
ipv6badcksum	<Double>	Read-only	Number of bad checksum packets

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			received (OBSOLETE).
icmpv6error	<Double>	Read-only	Number of erroneous ICMPv6 packets received (OBSOLETE).
icmpv6unspt	<Double>	Read-only	Number of ICMPv6 unsupported packets received (OBSOLETE).
icmpv6rtthsld	<Double>	Read-only	Number of ICMPv6 packets dropped for rate threshold exceeded (OBSOLETE).

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/protocolipv6

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/protocolipv6?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get protocolipv6 resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

protocolmptcp

Statistics for mptcp protocol resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
mptcptotmpcapsession	<Double>	Read-only	MPTCP total sessions created
mptcpmpcapsessionrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapsession
mptcptotsfconn	<Double>	Read-only	MPTCP total Subflow connections created

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcpsfconnrate	<Double>	Read-only	Rate (/s) counter for mptcptotsfconn
mptcpcurmpcapable sessions	<Double>	Read-only	The number of current mptcp sessions.
mptcpcursfconnectio ns	<Double>	Read-only	The number of current mptcp subflow connections.
mptcpcurpendingjoin	<Double>	Read-only	The number of current mptcp subflow connections in pending state.
mptcpcursesswithout sfs	<Double>	Read-only	Current Multipath TCP sessions without any subflows
mptcptotmpcapsyn	<Double>	Read-only	MPTCP total MP_CAPABLE received
mptcpmpcapsynrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapsyn
mptcptotmpcapsteer ed	<Double>	Read-only	Total MP_CAPABLE sessions steered
mptcpmpcapsteeredr ate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapsteer ed
mptcptotconnest	<Double>	Read-only	Total MP_CAPABLE sessions created.
mptcpconnestrate	<Double>	Read-only	Rate (/s) counter for mptcptotconnest

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcptotmpcapsynacksent	<Double>	Read-only	Total number of MP_CAPABLE SYN/ACKs sent.
mptcpmpcapsynacksentrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapsynacksent
mptcptotmpcapfackrecvd	<Double>	Read-only	Total number of MP_CAPABLE Final ACKs received.
mptcpmpcapfackrecvdrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapfackrecvd
mptcptotmpjoinsyn	<Double>	Read-only	MPTCP total MP_JOIN syn received
mptcpmpjoinsynrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpjoinsyn
mptcptotmpjoinsteered	<Double>	Read-only	Total MP_JOIN subflows steered
mptcpmpjoinsteeredrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpjoinsteered
mptcptotmpjoinsynacksent	<Double>	Read-only	Total MP_JOIN SYN/ACKs sent.
mptcpmpjoinsynacksentrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpjoinsynacksent
mptcptotmpjoinfackrecvd	<Double>	Read-only	Total number of MP_JOIN Final ACKs

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcpmpjoinfackrecvdrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpjoinfackrecvd
mptcptotmpjoin4thacksent	<Double>	Read-only	Total number of Subflow final ACK from peer in 3 way handshake validated with 4th ACK.
mptcpmpjoin4thacksentrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpjoin4thacksent
mptcptotestsfreplaced	<Double>	Read-only	MPTCP Total established subflows replaced due to new MP_JOIN.
mptcpestsfreplacedrate	<Double>	Read-only	Rate (/s) counter for mptcptotestsfreplaced
mptcptotpendsfreplaced	<Double>	Read-only	MPTCP Total pending subflows replaced due to new MP_JOIN.
mptcppendsfreplacedrate	<Double>	Read-only	Rate (/s) counter for mptcptotpendsfreplaced
mptcptotfreshackfrwd	<Double>	Read-only	Fresh ACK recieved on a subflow
mptcpfreshackfrwdrate	<Double>	Read-only	Rate (/s) counter for mptcptotfreshackfrwd
mptcpplainackfallback	<Double>	Read-only	MPTCP Fallback to regular tcp on

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			receiving plain ACK for DSS.
mptcpplainackfallbackrate	<Double>	Read-only	Rate (/s) counter for mptcpplainackfallback
mptcpinfinitemaprecvd	<Double>	Read-only	MPTCP Received and set infinite map and fallen back to regular TCP.
mptcpinfinitemaprecvdrate	<Double>	Read-only	Rate (/s) counter for mptcpinfinitemaprecvd
mptcptotaddrremoved	<Double>	Read-only	Total number of addresses removed from MPTCP connection with REMOVE_ADDR option
mptcpaddrremovedrate	<Double>	Read-only	Rate (/s) counter for mptcptotaddrremoved
mptcptotdss	<Double>	Read-only	Total number of Data Sequence Signal packets.
mptcpdssrate	<Double>	Read-only	Rate (/s) counter for mptcptotdss
mptcptotrxdss	<Double>	Read-only	MPTCP Total Data Sequence Signal packets received.
mptcprxdssrate	<Double>	Read-only	Rate (/s) counter for mptcptotrxdss

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcptottxdss	<Double>	Read-only	MMPTCP Total Data Sequence Signal packets sent
mptcptxdssrate	<Double>	Read-only	Rate (/s) counter for mptcptottxdss
mptcptotdssa	<Double>	Read-only	Total Data Sequence Signal packets during data transfer with DATA_ACK
mptcpdssarate	<Double>	Read-only	Rate (/s) counter for mptcptotdssa
mptcptotdssfreshack	<Double>	Read-only	MPTCP total Data Sequence Signal packets during data transfer with fresh ACK
mptcpdssfreshackrate	<Double>	Read-only	Rate (/s) counter for mptcptotdssfreshack
mptcptotdssm	<Double>	Read-only	MPTCP total data Sequence Signal packets with Data Sequence Mapping and checksum
mptcpdssmrate	<Double>	Read-only	Rate (/s) counter for mptcptotdssm
mptcptotinfinitemapfrwd	<Double>	Read-only	MPTCP received Data Sequence Signal with infinite map flag (Fallback to regular TCP).

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcpinfinitemapfrwdrate	<Double>	Read-only	Rate (/s) counter for mptcptotinfinitemapfrwd
mptcptotdatalessthandatalen	<Double>	Read-only	MPTCP Map amount of data not yet received.
mptcpdatalessthandatalenrate	<Double>	Read-only	Rate (/s) counter for mptcptotdatalessthandatalen
mptcppriobackuprx	<Double>	Read-only	MPTCP Subflow used as backup path.
mptcppriobackuprxrate	<Double>	Read-only	Rate (/s) counter for mptcppriobackuprx
mptcpprioclearbackuprx	<Double>	Read-only	Subflow earlier used only as a backup subflow, changes to regular subflow with MP_PRIO option
mptcpprioclearbackuprxrate	<Double>	Read-only	Rate (/s) counter for mptcpprioclearbackuprx
mptcptottxdatafin	<Double>	Read-only	Total MPTCP connection close requests sent
mptcptxdatafinrate	<Double>	Read-only	Rate (/s) counter for mptcptottxdatafin
mptcptotrxdatafin	<Double>	Read-only	Total MPTCP connection close(DATA_FIN) requests received.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcprxdatafinrate	<Double>	Read-only	Rate (/s) counter for mptcptotrxdatafin
mptcptottxsffin	<Double>	Read-only	MPTCP total subflow close requests.
mptcptxsffinrate	<Double>	Read-only	Rate (/s) counter for mptcptottxsffin
mptcperrinvalcookie	<Double>	Read-only	MPTCP invalid cookie received on MP_CAPABLE final ACK.
mptcperrinvalcookierate	<Double>	Read-only	Rate (/s) counter for mptcperrinvalcookie
mptcperrextnflagset	<Double>	Read-only	Extension flag is set on MP_CAPABLE request.
mptcperrextnflagsetrate	<Double>	Read-only	Rate (/s) counter for mptcperrextnflagset
mptcperrresflagset	<Double>	Read-only	MPTCP One or more reserved bits are set on MP_CAPABLE request.
mptcperrresflagsetrate	<Double>	Read-only	Rate (/s) counter for mptcperrresflagset
mptcperrunknowntoken	<Double>	Read-only	MPTCP invalid token received on MP_JOIN request.
mptcperrunknowntokenrate	<Double>	Read-only	Rate (/s) counter for mptcperrunknowntoken

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperraddridexist	<Double>	Read-only	MPTCP MP_JOIN request on existing address id.
mptcperraddridexistrate	<Double>	Read-only	Rate (/s) counter for mptcperraddridexist
mptcperraddrid0	<Double>	Read-only	MPTCP MP_JOIN request on address id 0.
mptcperraddrid0rate	<Double>	Read-only	Rate (/s) counter for mptcperraddrid0
mptcperrmaxsf	<Double>	Read-only	MPTCP new MP_JOIN request after maximum configured subflows are established.
mptcperrmaxsfrate	<Double>	Read-only	Rate (/s) counter for mptcperrmaxsf
mptcperrjointhreshold	<Double>	Read-only	MPTCP Global pending MP_JOIN threshold limit is reached, new MP_JOIN request will be dropped sending RST
mptcperrjointhresholdrate	<Double>	Read-only	Rate (/s) counter for mptcperrjointhreshold
mptcperrjoinafterfallback	<Double>	Read-only	MPTCP New MP_JOIN request received after fallback to regular tcp.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrjoinafterfallbackrate	<Double>	Read-only	Rate (/s) counter for mptcperrjoinafterfallback
mptcperrinvalmac	<Double>	Read-only	MPTCP invalid MAC on MP_JOIN final ACK.
mptcperrinvalmacrate	<Double>	Read-only	Rate (/s) counter for mptcperrinvalmac
mptcperrinvalopts	<Double>	Read-only	MPTCP invalid mptcp option is received and is dropped.
mptcperrinvaloptsrate	<Double>	Read-only	Rate (/s) counter for mptcperrinvalopts
mptcperroptiondiscarded	<Double>	Read-only	Invalid subtype in MPTCP option field and hence discarded.
mptcperroptiondiscardedrate	<Double>	Read-only	Rate (/s) counter for mptcperroptiondiscarded
mptcperroptsnosession	<Double>	Read-only	MPTCP options sent on non existing connection/subflow PCBs.
mptcperroptsnosessionrate	<Double>	Read-only	Rate (/s) counter for mptcperroptsnosession
mptcperrinvalremaddr	<Double>	Read-only	MPTCP remove address request received on invalid/ unknown address id.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrinvalremaddrrate	<Double>	Read-only	Rate (/s) counter for mptcperrinvalremaddr
mptcperroptssendrst	<Double>	Read-only	MPTCP sent RST on receiving improper option field.
mptcperroptssendrstrate	<Double>	Read-only	Rate (/s) counter for mptcperroptssendrst
mptcperrremaddrself	<Double>	Read-only	MPTCP remove address request for self address.
mptcperrremaddrselfrate	<Double>	Read-only	Rate (/s) counter for mptcperrremaddrself
mptcperrrssffail	<Double>	Read-only	Add RSS filter to steer traffic to right node on established MPTCP session failed.
mptcperrrssffailrate	<Double>	Read-only	Rate (/s) counter for mptcperrrssffail
mptcperrnopayloadlenpkt	<Double>	Read-only	MPTCP Payload length not specified in packet.
mptcperrnopayloadlenpktrate	<Double>	Read-only	Rate (/s) counter for mptcperrnopayloadlenpkt
mptcperrunsupportedmssnegotiated	<Double>	Read-only	MPTCP Unsupported MSS negotiated error.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrunsupportedmssnegotiatedrate	<Double>	Read-only	Rate (/s) counter for mptcperrunsupportedmssnegotiated
mptcperrbadcksum	<Double>	Read-only	MPTCP checksum failed. Connection will fallback to regular tcp.
mptcperrbadcksumrate	<Double>	Read-only	Rate (/s) counter for mptcperrbadcksum
mptcperrcryptonotsupported	<Double>	Read-only	MPTCP client crypto algorithm not supported.
mptcperrcryptonotsupportedrate	<Double>	Read-only	Rate (/s) counter for mptcperrcryptonotsupported
mptcperrversionnotsupported	<Double>	Read-only	MPTCP MP_CAPABLE request from unsupported mptcp client.
mptcperrversionnotsupportedrate	<Double>	Read-only	Rate (/s) counter for mptcperrversionnotsupported
mptcpplainackrst	<Double>	Read-only	MPTCP Sent RST on receiving plain ACK for DSS.
mptcpplainackrstrate	<Double>	Read-only	Rate (/s) counter for mptcpplainackrst
mptcperrdatafinpassive	<Double>	Read-only	MPTCP Data FIN received on passive subflow

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrdatafinpassiverate	<Double>	Read-only	Rate (/s) counter for mptcperrdatafinpassive
mptcperrfastclose	<Double>	Read-only	MPTCP FAST CLOSE sent.
mptcperrfastcloserate	<Double>	Read-only	Rate (/s) counter for mptcperrfastclose
mptcperrfastclosepassive	<Double>	Read-only	MPTCP Fast close received on passive subflow.
mptcperrfastclosepassiverate	<Double>	Read-only	Rate (/s) counter for mptcperrfastclosepassive
mptcperrfastclosekey	<Double>	Read-only	MPTCP FAST_CLOSE received with invalid key and the packet is dropped.
mptcperrfastclosekeyrate	<Double>	Read-only	Rate (/s) counter for mptcperrfastclosekey
mptcpmpfailsent	<Double>	Read-only	MPTCP Total MP_FAIL sent due to checksum failure.
mptcpmpfailsentrate	<Double>	Read-only	Rate (/s) counter for mptcpmpfailsent
mptcpmpfailrecvd	<Double>	Read-only	MPTCP Total MP_FAIL received and fallback to regular TCP.
mptcpmpfailrecvdrate	<Double>	Read-only	Rate (/s) counter for mptcpmpfailrecvd

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrnomappktrcvd	<Double>	Read-only	MPTCP Packet received with no Data Sequence Mapping.
mptcperrnomappktrcvdrate	<Double>	Read-only	Rate (/s) counter for mptcperrnomappktrcvd
mptcptotmoredatarcvd	<Double>	Read-only	MPTCP More data received than the available Data Sequence Mapping.
mptcpmoredatarcvdrate	<Double>	Read-only	Rate (/s) counter for mptcptotmoredatarcvd
mptcperrbadmapconndrop	<Double>	Read-only	MPTCP Drop the session incase of invalid Data Sequence map.
mptcperrbadmapconndroprate	<Double>	Read-only	Rate (/s) counter for mptcperrbadmapconndrop
mptcperrdupmaprecvd	<Double>	Read-only	MPTCP Duplicate maps in Data Sequence map table.
mptcperrdupmaprecvdrate	<Double>	Read-only	Rate (/s) counter for mptcperrdupmaprecvd
mptcperrinvalidsfn	<Double>	Read-only	MPTCP subflow map doesn't exactly match MPTCP session mapping.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mptcperrinvalidsfnrate	<Double>	Read-only	Rate (/s) counter for mptcperrinvalidsfn
mptcperrmapexists	<Double>	Read-only	MPTCP sequence map already exists.
mptcperrmapexistsrate	<Double>	Read-only	Rate (/s) counter for mptcperrmapexists
mptcperrretxpktrcvd	<Double>	Read-only	Retransmitted Data Recevied on MPTCP session.
mptcperrretxpktrcvdrate	<Double>	Read-only	Rate (/s) counter for mptcperrretxpktrcvd
mptcperrsfsessionallocfail	<Double>	Read-only	Attaching the subflow to MPTCP session failed due to failure in allocating memory to subflow map table.
mptcperrsfsessionallocfailrate	<Double>	Read-only	Rate (/s) counter for mptcperrsfsessionallocfail
mptcperrmpcapsessionallocfail	<Double>	Read-only	Creating a MPTCP connection failed due to failure in allocating memory to MPTCP connection management structure.
mptcperrmpcapsessionallocfailrate	<Double>	Read-only	Rate (/s) counter for mptcperrmpcapsessionallocfail
mptcptotmpcapsfpcballoc	<Double>	Read-only	Allocating memory to TCP protocol control

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			block(PCB) for subflow failed.
mptcpmpcapsfpcballocrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcapsfpcb alloc
mptcptotmpcballocfailed	<Double>	Read-only	Allocating memory to MPTCP protocol control block failed.
mptcpmpcballocfailedrate	<Double>	Read-only	Rate (/s) counter for mptcptotmpcballocfailed
mptcperrnsballocfailed	<Double>	Read-only	Failed to allocate memory to output MPTCP packet.
mptcperrnsballocfailedrate	<Double>	Read-only	Rate (/s) counter for mptcperrnsballocfailed
mptcperrnosffreensb	<Double>	Read-only	MPTCP output a packet without any subflow PCB.
mptcperrnosffreensbrate	<Double>	Read-only	Rate (/s) counter for mptcperrnosffreensb

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

protocoltcp

Statistics for tcp protocol resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
tcpactiveserverconn	<Double>	Read-only	Connections to a server currently responding to requests.
tcpcurserverconnopening	<Double>	Read-only	Server connections in the Opening state, which indicates that the handshakes are not yet complete.
tcpcurclientconnopening	<Double>	Read-only	Client connections in the Opening state, which indicates that the handshakes are not yet complete.
tcpcurclientconnestablished	<Double>	Read-only	Current client connections in the Established state,

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			which indicates that data transfer can occur between the Citrix ADC and the client.
tcpcurserverconnestablished	<Double>	Read-only	Current server connections in the Established state, which indicates that data transfer can occur between the Citrix ADC and the server.
tcptotrxpkts	<Double>	Read-only	TCP packets received.
tcprxpktsrate	<Double>	Read-only	Rate (/s) counter for tcptotrxpkts
tcptotrxbytes	<Double>	Read-only	Bytes of TCP data received.
tcprxbytesrate	<Double>	Read-only	Rate (/s) counter for tcptotrxbytes
tcptottxpkts	<Double>	Read-only	TCP packets transmitted.
tcptxpktsrate	<Double>	Read-only	Rate (/s) counter for tcptottxpkts
tcptottxbytes	<Double>	Read-only	Bytes of TCP data transmitted.
tcptxbytesrate	<Double>	Read-only	Rate (/s) counter for tcptottxbytes
tcpcurclientconn	<Double>	Read-only	Client connections, including connections in the

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Opening, Established, and Closing state.
tcpcurclientconnclosing	<Double>	Read-only	Client connections in the Closing state, which indicates that the connection termination process has initiated but is not complete.
tcptotclientconnopened	<Double>	Read-only	Client connections opened by the Citrix ADC since startup (after three-way handshake). This counter is reset when the Citrix ADC is restarted.
tcpclientconnopenedrate	<Double>	Read-only	Rate (/s) counter for tcptotclientconnopened
tcpcurserverconn	<Double>	Read-only	Server connections, including connections in the Opening, Established, and Closing state.
tcpcurserverconnclosing	<Double>	Read-only	Server connections in the Closing state, which indicates that the connection termination process has initiated but is not complete.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcptotserverconnopened	<Double>	Read-only	Server connections initiated by the Citrix ADC since startup. This counter is reset when the Citrix ADC is restarted.
tcpserverconnopenedrate	<Double>	Read-only	Rate (/s) counter for tcptotserverconnopened
tcpsurgequeuelen	<Double>	Read-only	Connections in the surge queue. When the Citrix ADC cannot open a connection to the server, for example when maximum connections have been reached, the Citrix ADC queues these requests.
tcpspareconn	<Double>	Read-only	Spare connections available. To save time and resources in establishing another connection for a new client, the connection on the server is not closed after completing the request from the first client and is available for serving future requests.
tcptotzombiecltconnflushed	<Double>	Read-only	Client connections that are flushed because the client

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			has been idle for some time.
tcpzombiecltconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiecltconnflushed
tcptotzombiehalfopencltconnflushed	<Double>	Read-only	Half-opened client connections that are flushed because the three-way handshakes are not complete.
tcpzombiehalfopencltconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiehalfopencltconnflushed
tcptotzombieactivehalfclosecltconnflushed	<Double>	Read-only	Active half-closed client connections that are flushed because the client has closed the connection and there has been no activity on the connection.
tcpzombieactivehalfclosecltconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombieactivehalfclosecltconnflushed
tcptotzombiepassivehalfclosecltconnflushed	<Double>	Read-only	Passive half-closed client connections that are flushed because the Citrix ADC has closed the connection and there has been no activity on the connection.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcpzombiepassivehalfclosecltconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiepassivehalfclosecltconnflushed
tcptotzombiesvrconnflushed	<Double>	Read-only	Server connections that are flushed because there have been no client requests in the queue for some time.
tcpzombiesvrconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiesvrconnflushed
tcptotzombiehalfopensvrconnflushed	<Double>	Read-only	Half-opened server connections that are flushed because the three-way handshakes are not complete.
tcpzombiehalfopensvrconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiehalfopensvrconnflushed
tcptotzombieactivehalfclosesvrconnflushed	<Double>	Read-only	Active half-closed server connections that are flushed because the server has closed the connection and there has been no activity on the connection.
tcpzombieactivehalfclosesvrconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombieactivehalfclosesvrconnflushed

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcptotzombiepassivehalfclosesrvconnflushed	<Double>	Read-only	Passive half-closed server connections that are flushed because the Citrix ADC has closed the connection and there has been no activity on the connection.
tcpzombiepassivehalfclosesrvconnflushedrate	<Double>	Read-only	Rate (/s) counter for tcptotzombiepassivehalfclosesrvconnflushed
pcbtotzombiecall	<Double>	Read-only	Times the Zombie cleanup function is called. Every time a connection is flushed, it is marked for cleanup. The Zombie cleanup function clears all these connections at predefined intervals.
pcbzombiecallrate	<Double>	Read-only	Rate (/s) counter for pcbtotzombiecall
tcptotsyn	<Double>	Read-only	SYN packets received
tcpsynrate	<Double>	Read-only	Rate (/s) counter for tcptotsyn
tcptotsynprobe	<Double>	Read-only	Probes from the Citrix ADC to a server. The Citrix ADC sends a SYN packet to the server to check its availability and

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			expects a SYN_ACK packet from the server before a specified response timeout.
tcpsynproberate	<Double>	Read-only	Rate (/s) counter for tcptotsynprobe
tcptotsvrfin	<Double>	Read-only	FIN packets received from the server.
tcpsvrfinrate	<Double>	Read-only	Rate (/s) counter for tcptotsvrfin
tcptotcltfin	<Double>	Read-only	FIN packets received from the clients.
tcpcltfinrate	<Double>	Read-only	Rate (/s) counter for tcptotcltfin
tcpwaittosyn	<Double>	Read-only	SYN packets (packets used to initiate a TCP connection) received on connections that are in the TIME_WAIT state. Packets cannot be transferred on a connection in this state.
tcpwaittosynrate	<Double>	Read-only	Rate (/s) counter for tcpwaittosyn
tcpwaittodata	<Double>	Read-only	Bytes of data received on connections that are in the TIME_WAIT state. Data cannot be transferred on a

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			connection that is in this state.
tcpwaittodatarate	<Double>	Read-only	Rate (/s) counter for tcpwaittodata
tcptotsynheld	<Double>	Read-only	SYN packets held on the Citrix ADC that are waiting for a server connection.
tcpsynheldrate	<Double>	Read-only	Rate (/s) counter for tcptotsynheld
tcptotsynflush	<Double>	Read-only	SYN packets flushed on the Citrix ADC because of no response from the server for three or more seconds.
tcpsynflushrate	<Double>	Read-only	Rate (/s) counter for tcptotsynflush
tcptotfinwaitclosed	<Double>	Read-only	Connections closed on the Citrix ADC because the number of connections in the TIME_WAIT state has exceeded the default value of 7000.
tcpfinwaitclosedrate	<Double>	Read-only	Rate (/s) counter for tcptotfinwaitclosed
tcperrbadchecksum	<Double>	Read-only	Packets received with a TCP checksum error.
tcperrbadchecksumrate	<Double>	Read-only	Rate (/s) counter for tcperrbadchecksum

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrdataafterfin	<Double>	Read-only	Packets received following a connection termination request. This error is usually caused by a reordering of packets during transmission.
tcperrdataafterfinrate	<Double>	Read-only	Rate (/s) counter for tcperrdataafterfin
tcperrsyninsynrcvd	<Double>	Read-only	SYN packets received on a connection that is in the SYN_RCVD state. A connection goes into the SYN_RCVD state after receiving a SYN packet.
tcperrsyninsynrcvdrate	<Double>	Read-only	Rate (/s) counter for tcperrsyninsynrcvd
tcperrsyninest	<Double>	Read-only	SYN packets received on a connection that is in the ESTABLISHED state. A SYN packet is not expected on an ESTABLISHED connection.
tcperrsyninestrate	<Double>	Read-only	Rate (/s) counter for tcperrsyninest
tcperrsynsentbadack	<Double>	Read-only	Incorrect ACK packets received on a connection that is in the SYN_SENT

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			state. An incorrect ACK packet is the third packet in the three-way handshake that has an incorrect sequence number.
tcperrsynsentbadack rate	<Double>	Read-only	Rate (/s) counter for tcperrsynsentbadack
tcperrrst	<Double>	Read-only	Reset packets received from a client or a server.
tcperrrstrate	<Double>	Read-only	Rate (/s) counter for tcperrrst
tcperrrstnonest	<Double>	Read-only	Reset packets received on a connection that is not in the ESTABLISHED state.
tcperrrstnonestrate	<Double>	Read-only	Rate (/s) counter for tcperrrstnonest
tcperrrstoutofwindow	<Double>	Read-only	Reset packets received on a connection that is out of the current TCP window.
tcperrrstoutofwindow rate	<Double>	Read-only	Rate (/s) counter for tcperrrstoutofwindow
tcperrrstintimewait	<Double>	Read-only	Reset packets received on a connection that is in the TIME_WAIT state. Packets

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			cannot be transferred on a connection in the TIME_WAIT state.
tcperrrstintimewaitrate	<Double>	Read-only	Rate (/s) counter for tcperrrstintimewait
tcperrsvroutoforder	<Double>	Read-only	Out of order TCP packets received from a server.
tcperrsvroutoforderrate	<Double>	Read-only	Rate (/s) counter for tcperrsvroutoforder
tcperrcltoutoforder	<Double>	Read-only	Out of order TCP packets received from a client.
tcperrcltoutoforderrate	<Double>	Read-only	Rate (/s) counter for tcperrcltoutoforder
tcperrclthole	<Double>	Read-only	TCP holes created on a client connection. When out of order packets are received from a client, a hole is created on the Citrix ADC for each group of missing packets.
tcperrcltholerate	<Double>	Read-only	Rate (/s) counter for tcperrclthole
tcperrsvrhole	<Double>	Read-only	TCP holes created on a server connection. When out of order packets are received from a server, a hole is created on the Citrix

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			ADC for each group of missing packets.
tcperrsvrholerate	<Double>	Read-only	Rate (/s) counter for tcperrsvrhole
tcperrcookiepktseqreject	<Double>	Read-only	SYN cookie packets rejected because they contain an incorrect sequence number.
tcperrcookiepktseqrejectrate	<Double>	Read-only	Rate (/s) counter for tcperrcookiepktseqreject
tcperrcookiepktsigreject	<Double>	Read-only	SYN cookie packets rejected because they contain an incorrect signature.
tcperrcookiepktsigrejectrate	<Double>	Read-only	Rate (/s) counter for tcperrcookiepktsigreject
tcperrcookiepktseqdrop	<Double>	Read-only	SYN cookie packets dropped because the sequence number specified in the packets is outside the current window.
tcperrcookiepktseqdroprate	<Double>	Read-only	Rate (/s) counter for tcperrcookiepktseqdrop
tcperrcookiepktmssreject	<Double>	Read-only	SYN cookie packets rejected because the maximum segment size (MSS) specified

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			in the packets is incorrect.
tcperrcookiepktmssrejectrate	<Double>	Read-only	Rate (/s) counter for tcperrcookiepktmssreject
tcperranyportfail	<Double>	Read-only	Port allocations that have failed on a mapped IP address because the maximum limit of 65536 has been exceeded.
tcperranyportfailrate	<Double>	Read-only	Rate (/s) counter for tcperranyportfail
tcperripportfail	<Double>	Read-only	Port allocations that have failed on a subnet IP address or vserver IP address because the maximum limit of 65536 has been exceeded.
tcperripportfailrate	<Double>	Read-only	Rate (/s) counter for tcperripportfail
tcperrstraypkt	<Double>	Read-only	Number of stray or misrouted packets.
tcperrstraypktrate	<Double>	Read-only	Rate (/s) counter for tcperrstraypkt
tcperrsentrst	<Double>	Read-only	Reset packets sent to a client or a server.
tcperrsentrstrate	<Double>	Read-only	Rate (/s) counter for tcperrsentrst

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrbadstateconn	<Double>	Read-only	Connections that are not in a valid TCP state.
tcperrbadstateconnrate	<Double>	Read-only	Rate (/s) counter for tcperrbadstateconn
tcperrrstthreshold	<Double>	Read-only	Reset packets dropped because the default threshold of 100 resets per 10 milliseconds has been exceeded. This is a configurable value using the set rateControl command.
tcperrrstthresholdrate	<Double>	Read-only	Rate (/s) counter for tcperrrstthreshold
tcperroutofwindowpkts	<Double>	Read-only	Packets received that are out of the current advertised window.
tcperroutofwindowpktsrate	<Double>	Read-only	Rate (/s) counter for tcperroutofwindowpkts
tcperrsyndroppedcongestion	<Double>	Read-only	SYN packets dropped because of network congestion.
tcperrsyndroppedcongestionrate	<Double>	Read-only	Rate (/s) counter for tcperrsyndroppedcongestion
tcperrcltretrasmit	<Double>	Read-only	Packets retransmitted by a client. This usually

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			occurs because the acknowledgement from the Citrix ADC has not reached the client.
tcperrcltretrasmitrate	<Double>	Read-only	Rate (/s) counter for tcperrcltretrasmit
tcperrfullretrasmit	<Double>	Read-only	Full packets retransmitted by the client or the server.
tcperrfullretrasmitrate	<Double>	Read-only	Rate (/s) counter for tcperrfullretrasmit
tcperrsynretry	<Double>	Read-only	SYN packets resent to a server.
tcperrsynretryrate	<Double>	Read-only	Rate (/s) counter for tcperrsynretry
tcperrsyngiveup	<Double>	Read-only	Attempts to establish a connection on the Citrix ADC that timed out.
tcperrsyngiveuprate	<Double>	Read-only	Rate (/s) counter for tcperrsyngiveup
tcperrretransmit	<Double>	Read-only	TCP packets retransmitted. The Citrix ADC attempts to retransmit the packet up to seven times, after which it resets the other half of the TCP connection.
tcperrretransmitrate	<Double>	Read-only	Rate (/s) counter for tcperrretransmit

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrfirstretransmissions	<Double>	Read-only	Packets retransmitted once by the Citrix ADC.
tcperrfirstretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrfirstretransmissions
tcperrthirdretransmissions	<Double>	Read-only	Packets retransmitted three times by the Citrix ADC.
tcperrthirdretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrthirdretransmissions
tcperrfifthretransmissions	<Double>	Read-only	Packets retransmitted five times by the Citrix ADC.
tcperrfifthretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrfifthretransmissions
tcperrseventhretransmissions	<Double>	Read-only	Packets retransmitted seven times by the Citrix ADC. If this fails, the Citrix ADC terminates the connection.
tcperrseventhretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrseventhretransmissions
tcperrfastretransmissions	<Double>	Read-only	TCP packets on which the Citrix ADC performs a fast

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			retransmission in response to three duplicate acknowledgements or a partial acknowledgement. The Citrix ADC assumes that the packet is lost and retransmits the packet before its time-out.
tcperrfastretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrfastretransmissions
tcperrsvrretrasmit	<Double>	Read-only	Packets retransmitted by a server. This usually occurs because the acknowledgement from the Citrix ADC has not reached the server.
tcperrsvrretrasmitrate	<Double>	Read-only	Rate (/s) counter for tcperrsvrretrasmit
tcperrpartialretrasmit	<Double>	Read-only	Partial packet retransmits by a client or server due to congestion on the connection. This usually occurs because the window advertised by the Citrix ADC is not big enough to hold the full packet.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrpartialretrasmit rate	<Double>	Read-only	Rate (/s) counter for tcperrpartialretrasmit
tcperrfinretry	<Double>	Read-only	FIN packets resent to a server or a client.
tcperrfinretryrate	<Double>	Read-only	Rate (/s) counter for tcperrfinretry
tcperrfingiveup	<Double>	Read-only	Connections that were timed out by the Citrix ADC because of not receiving the ACK packet after retransmitting the FIN packet four times.
tcperrfingiveuprate	<Double>	Read-only	Rate (/s) counter for tcperrfingiveup
tcperrsecondretrans missions	<Double>	Read-only	Packets retransmitted twice by the Citrix ADC.
tcperrsecondretrans missionsrate	<Double>	Read-only	Rate (/s) counter for tcperrsecondretrans missions
tcperrforthretransmis sions	<Double>	Read-only	Packets retransmitted four times by the Citrix ADC.
tcperrforthretransmis sionsrate	<Double>	Read-only	Rate (/s) counter for tcperrforthretransmis sions

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
tcperrsixthretransmissions	<Double>	Read-only	Packets retransmitted six times by the Citrix ADC.
tcperrsixthretransmissionsrate	<Double>	Read-only	Rate (/s) counter for tcperrsixthretransmissions
tcperrretransmitgiveup	<Double>	Read-only	Number of times Citrix ADC terminates a connection after retransmitting the packet seven times on that connection.Retrasnmission happens when recieving end doesn't acknowledges the packet.
tcperrretransmitgiveuprate	<Double>	Read-only	Rate (/s) counter for tcperrretransmitgiveup
tcperrcipalloc	<Double>	Read-only	Number of times TCP level client header insertion failure
tcperrcipallocrate	<Double>	Read-only	Rate (/s) counter for tcperrcipalloc

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/protocoltcp

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/protocoltcp?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get protocoltcp resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

protocoludp

Statistics for UDP Protocol resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
udptotrxpkts	<Double>	Read-only	Total number of UDP packets received.
udprxpktsrate	<Double>	Read-only	Rate (/s) counter for udptotrxpkts
udptotrxbytes	<Double>	Read-only	Total number of UDP data received in bytes.
udprxbytesrate	<Double>	Read-only	Rate (/s) counter for udptotrxbytes
udptottxpkts	<Double>	Read-only	Total number of UDP packets transmitted.
udptxpktsrate	<Double>	Read-only	Rate (/s) counter for udptottxpkts
udptottxbytes	<Double>	Read-only	Total number of UDP data transmitted in bytes.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
udptxbytesrate	<Double>	Read-only	Rate (/s) counter for udptottxbytes
udpcurratethreshold	<Double>	Read-only	Limit for UDP packets handled every 10 milliseconds. Default value, 0, applies no limit. This is a configurable value using the set rateControl command.
udptotunknownsvcpkts	<Double>	Read-only	Stray UDP packets dropped due to no configured listening service.
udpbadchecksum	<Double>	Read-only	Packets received with a UDP checksum error.
udpcurratethresholdexceeds	<Double>	Read-only	Number of times the UDP rate threshold is exceeded. If this counter continuously increases, first make sure the UDP packets received are genuine. If they are, increase the current rate threshold. This is a configurable value using the set rateControl command.

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/protocoludp

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/protocoludp?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get protocoludp resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:` *

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/qos

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/qos?
args=name:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>

Use this query-parameter to get qos resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of

creating a NITRO session (using the login object) and then using that session to perform all operations,

To do this, you must specify the username and password in the request header of the NITRO request as follows:

X-NITRO-USER:<username>

X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/spilloverpolicy?
args=name:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>

Use this query-parameter to get spilloverpolicy resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "spilloverpolicy": [ {

"name":<String_value>,

"pipolicyundefhitsrate":<Double_value>,

"pipolicyundefhits":<Double_value>,

"pipolicyhitsrate":<Double_value>,

"pipolicyhits":<Double_value>

}]}
```

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
ssltothwdecbesecondary	<Double>	Read-only	Number of bytes decrypted on the back-end in hardware on secondary card.
sslhwdecbesecondaryrate	<Double>	Read-only	Rate (/s) counter for ssltothwdecbesecondary
ssltothwdecfesecondary	<Double>	Read-only	Number of bytes decrypted on the front-end in hardware on secondary card.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslhwdecfesecondaryrate	<Double>	Read-only	Rate (/s) counter for ssltothwdecfesecondary
ssltothwencbesecondary	<Double>	Read-only	Number of bytes encrypted on the back-end in hardware on secondary card.
sslhwencbesecondaryrate	<Double>	Read-only	Rate (/s) counter for ssltothwencbesecondary
ssltothwencfesecondary	<Double>	Read-only	Number of bytes encrypted on the front-end in hardware on secondary card.
sslhwencfesecondaryrate	<Double>	Read-only	Rate (/s) counter for ssltothwencfesecondary
ssltotdechwsecondary	<Double>	Read-only	Number of bytes decrypted in hardware on secondary card.
ssldechwsecondaryrate	<Double>	Read-only	Rate (/s) counter for ssltotdechwsecondary
ssltotenchwsecondary	<Double>	Read-only	Number of bytes encrypted in hardware on secondary card.
sslenchwsecondaryrate	<Double>	Read-only	Rate (/s) counter for ssltotenchwsecondary

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslcryptoutilizationstat2nd	<Double>	Read-only	Utilization of the hardware crypto resource. Only valid values are 0-100%. Only works on N3FIPS+N3 hybrid platform.
sslcryptoutilizationstat	<Double>	Read-only	Utilization of the hardware crypto resource. Only valid values are 0-100%. Only works on platforms with Nitrox-3 chips.
sslnumcardsupsecondary	<Double>	Read-only	Number of Add on SSL cards that are UP.
sslcardssecondary	<Double>	Read-only	Number of secondary SSL crypto cards present on the Citrix ADC.
sslnumcardsup	<Double>	Read-only	Number of SSL cards that are UP. If the number of cards UP is lower than a threshold, a failover is initiated.
sslcardstatus	<Double>	Read-only	Status of the SSL card(s). The value should be interpreted in binary form, with each set bit indicates a card as UP.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslcards	<Double>	Read-only	Number of SSL crypto cards present on the Citrix ADC.
sslenginestatus	<Double>	Read-only	State of the SSL Engine (1=UP/ 0=DOWN). This state is decided based on SSL Feature/License status and minimum number of cards UP.
ssltotsessions	<Double>	Read-only	Number of SSL sessions on the Citrix ADC.
sslsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotsessions
ssltottransactions	<Double>	Read-only	Number of SSL transactions on the Citrix ADC
ssltransactionsrate	<Double>	Read-only	Rate (/s) counter for ssltottransactions
ssltotsslv2transactions	<Double>	Read-only	Number of SSLv2 transactions on the Citrix ADC.
sslsslv2transactionsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv2transactions
ssltotsslv3transactions	<Double>	Read-only	Total number of SSLv3 transactions on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslsslv3transactionsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv3transactions
ssltottlsv1transactions	<Double>	Read-only	Number of TLSv1 transactions on the Citrix ADC.
ssltlsv1transactionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv1transactions
ssltottlsv11transactions	<Double>	Read-only	Number of TLSv1.1 transactions on the Citrix ADC.
ssltlsv11transactionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv11transactions
ssltottlsv12transactions	<Double>	Read-only	Number of TLSv1.2 transactions on the Citrix ADC.
ssltlsv12transactionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv12transactions
ssltottlsv13transactions	<Double>	Read-only	Number of TLSv1.3 transactions on the Citrix ADC.
ssltlsv13transactionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv13transactions
ssltotdtlsv1transactions	<Double>	Read-only	Number of DTLSv1 transactions on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssldtlsv1transactionsrate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv1transactions
ssltotsslv2sessions	<Double>	Read-only	Number of SSLv2 sessions on the Citrix ADC.
sslsslv2sessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv2sessions
ssltotsslv3sessions	<Double>	Read-only	Number of SSLv3 sessions on the Citrix ADC.
sslsslv3sessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv3sessions
ssltottlsv1sessions	<Double>	Read-only	Number of TLSv1 sessions on the Citrix ADC.
ssltlsv1sessionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv1sessions
ssltottlsv11sessions	<Double>	Read-only	Number of TLSv1.1 sessions on the Citrix ADC.
ssltlsv11sessionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv11sessions
ssltottlsv12sessions	<Double>	Read-only	Number of TLSv1.2 sessions on the Citrix ADC.
ssltlsv12sessionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv12sessions

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltottlsv13sessions	<Double>	Read-only	Number of TLSv1.3 sessions on the Citrix ADC.
ssltlsv13sessionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv13sessions
ssltotdtlsv1sessions	<Double>	Read-only	Number of DTLSv1 sessions on the Citrix ADC.
ssldtlsv1sessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv1sessions
ssltotnewsessions	<Double>	Read-only	Number of new SSL sessions created on the Citrix ADC.
sslnewsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotnewsessions
ssltotsessionmiss	<Double>	Read-only	Number of SSL session reuse misses on the Citrix ADC.
sslsessionmissrate	<Double>	Read-only	Rate (/s) counter for ssltotsessionmiss
ssltotsessionhits	<Double>	Read-only	Number of SSL session reuse hits on the Citrix ADC.
sslsessionhitsrate	<Double>	Read-only	Rate (/s) counter for ssltotsessionhits
sslbetotsessions	<Double>	Read-only	Number of back-end SSL sessions on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbesessionsrate	<Double>	Read-only	Rate (/s) counter for sslbetotsessions
sslbetotsslv3sessions	<Double>	Read-only	Number of back-end SSLv3 sessions on the Citrix ADC.
sslbesslv3sessionsrate	<Double>	Read-only	Rate (/s) counter for sslbetotsslv3sessions
sslbetottlsv1sessions	<Double>	Read-only	Number of back-end TLSv1 sessions on the Citrix ADC.
sslbetlsv1sessionsrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv1sessions
sslbetottlsv11sessions	<Double>	Read-only	Number of back-end TLSv1.1 sessions on the Citrix ADC.
sslbetlsv11sessionsrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv11sessions
sslbetottlsv12sessions	<Double>	Read-only	Number of back-end TLSv1.2 sessions on the Citrix ADC.
sslbetlsv12sessionsrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv12sessions
sslbetotdtlsv1sessions	<Double>	Read-only	Number of back-end DTLSv1 sessions on the Citrix ADC.
sslbedtlsv1sessionsrate	<Double>	Read-only	Rate (/s) counter for sslbetotdtlsv1sessions

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetotsessionmultiplexattempts	<Double>	Read-only	Number of back-end SSL session multiplex attempts on the Citrix ADC.
sslbesessionmultiplexattemptsrate	<Double>	Read-only	Rate (/s) counter for sslbetotsessionmultiplexattempts
sslbetotsessionmultiplexattemptsuccess	<Double>	Read-only	Number of back-end SSL session multiplex successes on the Citrix ADC.
sslbesessionmultiplexattemptsuccessrate	<Double>	Read-only	Rate (/s) counter for sslbetotsessionmultiplexattemptsuccess
sslbetotsessionmultiplexattemptfails	<Double>	Read-only	Number of back-end SSL session multiplex failures on the Citrix ADC.
sslbesessionmultiplexattemptfailsrate	<Double>	Read-only	Rate (/s) counter for sslbetotsessionmultiplexattemptfails
ssltotenc	<Double>	Read-only	Number of bytes encrypted on the Citrix ADC.
sslencrate	<Double>	Read-only	Rate (/s) counter for ssltotenc
ssltotdec	<Double>	Read-only	Number of bytes decrypted on the Citrix ADC.
ssldecrate	<Double>	Read-only	Rate (/s) counter for ssltotdec

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotsslserverinrecords	<Double>	Read-only	Number server in record on the Citrix ADC.
sslsslserverinrecordsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslserverinrecords
ssltotrenegsessions	<Double>	Read-only	Number of SSL session renegotiations on the Citrix ADC.
sslrenegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotrenegsessions
ssltotsslv3renegsessions	<Double>	Read-only	Number of session renegotiations done on SSLv3.
sslsslv3renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv3renegsessions
ssltottlsv1renegsessions	<Double>	Read-only	Number of SSL session renegotiations done on TLSv1.
ssltlsv1renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv1renegsessions
ssltottlsv11renegsessions	<Double>	Read-only	Number of SSL session renegotiations done on TLSv1.1.
ssltlsv11renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv11renegsessions

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltottlsv12renegsessions	<Double>	Read-only	Number of SSL session renegotiations done on TLSv1.2.
ssltlsv12renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv12renegsessions
ssltotdtlsv1renegsessions	<Double>	Read-only	Number of SSL session renegotiations done on DTLSv1.
ssldtlsv1renegsessionsrate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv1renegsessions
ssltotrsa512keyexchanges	<Double>	Read-only	Number of RSA 512-bit key exchanges on the Citrix ADC.
sslrsa512keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotrsa512keyexchanges
ssltotrsa1024keyexchanges	<Double>	Read-only	Number of RSA 1024-bit key exchanges on the Citrix ADC.
sslrsa1024keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotrsa1024keyexchanges
ssltotrsa2048keyexchanges	<Double>	Read-only	Number of RSA 2048-bit key exchanges on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslrsa2048keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotrsa2048keyexchanges
ssltotrsa4096keyexchanges	<Double>	Read-only	Number of RSA 4096-bit key exchanges on the Citrix ADC.
sslrsa4096keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotrsa4096keyexchanges
ssltotdh512keyexchanges	<Double>	Read-only	Number of Diffie-Helman 512-bit key exchanges on the Citrix ADC.
ssldh512keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotdh512keyexchanges
ssltotdh1024keyexchanges	<Double>	Read-only	Number of Diffie-Helman 1024-bit key exchanges on the Citrix ADC.
ssldh1024keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotdh1024keyexchanges
ssltotdh2048keyexchanges	<Double>	Read-only	Number of Diffie-Helman 2048-bit key exchanges on the Citrix ADC.
ssldh2048keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotdh2048keyexchanges

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotdh4096keyexchanges	<Double>	Read-only	Number of Diffie-Helman 4096-bit key exchanges on the Citrix ADC.
ssldh4096keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotdh4096keyexchanges
ssltotecdhe521keyexchanges	<Double>	Read-only	Number of 521 Elliptical Curve Diffie-Helman on the Citrix ADC.
sslecdhe521keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotecdhe521keyexchanges
ssltotecdhe384keyexchanges	<Double>	Read-only	Number of 384 Elliptical Curve Diffie-Helman on the Citrix ADC.
sslecdhe384keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotecdhe384keyexchanges
ssltotecdhe256keyexchanges	<Double>	Read-only	Number of 256 Elliptical Curve Diffie-Helman on the Citrix ADC.
sslecdhe256keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotecdhe256keyexchanges
ssltotecdhe224keyexchanges	<Double>	Read-only	Number of 224 Elliptical Curve Diffie-Helman on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslecdhe224keyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotecdhe224keyexchanges
ssltot40bitrc4ciphers	<Double>	Read-only	Number of RC4 40-bit cipher encryptions on the Citrix ADC.
ssl40bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot40bitrc4ciphers
ssltot56bitrc4ciphers	<Double>	Read-only	Number of RC4 56-bit cipher encryptions on the Citrix ADC.
ssl56bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot56bitrc4ciphers
ssltot64bitrc4ciphers	<Double>	Read-only	Number of RC4 64-bit cipher encryptions on the Citrix ADC.
ssl64bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot64bitrc4ciphers
ssltot128bitrc4ciphers	<Double>	Read-only	Number of RC4 128-bit cipher encryptions on the Citrix ADC.
ssl128bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot128bitrc4ciphers
ssltot40bitdesciphers	<Double>	Read-only	Number of DES 40-bit cipher encryptions on the Citrix ADC.
ssl40bitdesciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot40bitdesciphers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltot56bitdesciphers	<Double>	Read-only	Number of DES 56-bit cipher encryptions on the Citrix ADC.
ssl56bitdesciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot56bitdesciphers
ssltot168bit3desciphers	<Double>	Read-only	Number of DES 168-bit cipher encryptions on the Citrix ADC.
ssl168bit3desciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot168bit3desciphers
ssltotcipheraes128	<Double>	Read-only	Number of AES 128-bit cipher encryptions on the Citrix ADC.
sslcipheraes128rate	<Double>	Read-only	Rate (/s) counter for ssltotcipheraes128
ssltotcipheraes256	<Double>	Read-only	Number of AES 256-bit cipher encryptions on the Citrix ADC.
sslcipheraes256rate	<Double>	Read-only	Rate (/s) counter for ssltotcipheraes256
ssltot40bitrc2ciphers	<Double>	Read-only	Number of RC2 40-bit cipher encryptions on the Citrix ADC.
ssl40bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot40bitrc2ciphers
ssltot56bitrc2ciphers	<Double>	Read-only	Number of RC2 56-bit cipher encryptions on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssl56bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot56bitrc2ciphers
ssltot128bitrc2ciphers	<Double>	Read-only	Number of RC2 128-bit cipher encryptions on the Citrix ADC.
ssl128bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot128bitrc2ciphers
ssltot128bitaesgcmciphers	<Double>	Read-only	Number of AEC-GCM 128-bit cipher encryptions on the Citrix ADC.
ssl128bitaesgcmciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot128bitaesgcmciphers
ssltot256bitaesgcmciphers	<Double>	Read-only	Number of AEC-GCM 256-bit cipher encryptions on the Citrix ADC.
ssl256bitaesgcmciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot256bitaesgcmciphers
ssltotnullciphers	<Double>	Read-only	Number of Null cipher encryptions on the Citrix ADC.
sslnullciphersrate	<Double>	Read-only	Rate (/s) counter for ssltotnullciphers
ssltotmd5mac	<Double>	Read-only	Number of MD5 hashes on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslmd5macrate	<Double>	Read-only	Rate (/s) counter for ssltotmd5mac
ssltotshamac	<Double>	Read-only	Number of SHA hashes on the Citrix ADC.
sslshamacrate	<Double>	Read-only	Rate (/s) counter for ssltotshamac
ssltotsha256mac	<Double>	Read-only	Number of SHA256 hashes on the Citrix ADC.
sslsha256macrate	<Double>	Read-only	Rate (/s) counter for ssltotsha256mac
ssltotsha384mac	<Double>	Read-only	Number of SHA384 hashes on the Citrix ADC.
sslsha384macrate	<Double>	Read-only	Rate (/s) counter for ssltotsha384mac
ssltotsslv2handshakes	<Double>	Read-only	Number of handshakes on SSLv2 on the Citrix ADC.
sslsslv2handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv2handshakes
ssltotsslv3handshakes	<Double>	Read-only	Number of handshakes on SSLv3 on the Citrix ADC.
sslsslv3handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv3handshakes

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltottlsv1handshakes	<Double>	Read-only	Number of SSL handshakes on TLSv1 on the Citrix ADC.
ssltlsv1handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv1handshakes
ssltottlsv11handshakes	<Double>	Read-only	Number of SSL handshakes on TLSv1.1 on the Citrix ADC.
ssltlsv11handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv11handshakes
ssltottlsv12handshakes	<Double>	Read-only	Number of SSL handshakes on TLSv1.2 on the Citrix ADC.
ssltlsv12handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv12handshakes
ssltottlsv13handshakes	<Double>	Read-only	Number of SSL handshakes on TLSv1.3 on the Citrix ADC.
ssltlsv13handshakesrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv13handshakes
ssltotdtlsv1handshakes	<Double>	Read-only	Number of SSL handshakes on DTLSv1 on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssldtlsv1handshakes rate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv1handshakes
ssltotsslv2clientauthentications	<Double>	Read-only	Number of client authentications done on SSLv2.
sslsslv2clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv2clientauthentications
ssltotsslv3clientauthentications	<Double>	Read-only	Number of client authentications done on SSLv3.
sslsslv3clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltotsslv3clientauthentications
ssltottlsv1clientauthentications	<Double>	Read-only	Number of client authentications done on TLSv1.
ssltlsv1clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv1clientauthentications
ssltottlsv11clientauthentications	<Double>	Read-only	Number of client authentications done on TLSv1.1.
ssltlsv11clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv11clientauthentications
ssltottlsv12clientauthentications	<Double>	Read-only	Number of client authentications done on TLSv1.2.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltlsv12clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv12clientauthentications
ssltottlsv13clientauthentications	<Double>	Read-only	Number of client authentications done on TLSv1.3.
ssltlsv13clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltottlsv13clientauthentications
ssltotdtlsv1clientauthentications	<Double>	Read-only	Number of client authentications done on DTLSv1.
ssldtlsv1clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for ssltotdtlsv1clientauthentications
ssltotrsaauthorizations	<Double>	Read-only	Number of RSA authentications on the Citrix ADC.
sslrsaauthorizationsrate	<Double>	Read-only	Rate (/s) counter for ssltotrsaauthorizations
ssltotdhauthorizations	<Double>	Read-only	Number of Diffie-Helman authentications on the Citrix ADC.
ssldhauthorizationsrate	<Double>	Read-only	Rate (/s) counter for ssltotdhauthorizations
ssltotdssauthorizations	<Double>	Read-only	Total number of times DSS authorization is used on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssldssauthorizationsrate	<Double>	Read-only	Rate (/s) counter for ssltotdssauthorizations
ssltotecdsaauthorizations	<Double>	Read-only	Total number of times ECDSA authorization is used on the Citrix ADC.
sslecdsaauthorizationsrate	<Double>	Read-only	Rate (/s) counter for ssltotecdsaauthorizations
ssltotnullauthorizations	<Double>	Read-only	Number of Null authentications on the Citrix ADC.
sslnullauthorizationsrate	<Double>	Read-only	Rate (/s) counter for ssltotnullauthorizations
ssltotbkendsessionrenegotiate	<Double>	Read-only	Number of back-end SSL session renegotiations on the Citrix ADC.
sslbkendsessionrenegotiaterate	<Double>	Read-only	Rate (/s) counter for ssltotbkendsessionrenegotiate
ssltotbkendsslv3renego	<Double>	Read-only	Number of back-end SSLv3 session renegotiations on the Citrix ADC.
sslbkendsslv3renegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkendsslv3renego
ssltotbkendtlsvlrenego	<Double>	Read-only	Number of back-end TLSv1 session

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			renegotiations on the Citrix ADC.
sslbkendtlsvlrenegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkendtlsvlrenego
ssltotbkendtlsv11renego	<Double>	Read-only	Number of back-end TLSv1.1 session renegotiations on the Citrix ADC.
sslbkendtlsv11renegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkendtlsv11renego
ssltotbkendtlsv12renego	<Double>	Read-only	Number of back-end TLSv1.2 session renegotiations on the Citrix ADC.
sslbkendtlsv12renegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkendtlsv12renego
ssltotbkenddtlsvlrenego	<Double>	Read-only	Number of back-end DTLSv1 session renegotiations on the Citrix ADC.
sslbkenddtlsvlrenegorate	<Double>	Read-only	Rate (/s) counter for ssltotbkenddtlsvlrenego
sslbetotrsa512keyexchanges	<Double>	Read-only	Number of back-end RSA 512-bit key exchanges on the Citrix ADC.
sslbersa512keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsa512keyexchanges

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetotrsa1024keyexchanges	<Double>	Read-only	Number of back-end RSA 1024-bit key exchanges on the Citrix ADC.
sslbersa1024keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsa1024keyexchanges
sslbetotrsa2048keyexchanges	<Double>	Read-only	Number of back-end RSA 2048-bit key exchanges on the Citrix ADC.
sslbersa2048keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsa2048keyexchanges
sslbetotrsa4096keyexchanges	<Double>	Read-only	Number of back-end RSA 4096-bit key exchanges on the Citrix ADC.
sslbersa4096keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsa4096keyexchanges
sslbetotdh512keyexchanges	<Double>	Read-only	Number of back-end DH 512-bit key exchanges on the Citrix ADC.
sslbedh512keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdh512keyexchanges
sslbetotdh1024keyexchanges	<Double>	Read-only	Number of back-end DH 1024-bit key exchanges on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbedh1024keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdh1024keyexchanges
sslbetotdh2048keyexchanges	<Double>	Read-only	Number of back-end DH 2048-bit key exchanges on the Citrix ADC.
sslbedh2048keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdh2048keyexchanges
sslbetotdh4096keyexchanges	<Double>	Read-only	Number of back-end DH 4096-bit key exchanges on the Citrix ADC.
sslbedh4096keyexchangesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdh4096keyexchanges
sslbetotecdhecurve521	<Double>	Read-only	Number of back-end ECDHE 521 curve Key exchanges on the Citrix ADC.
sslbeecdhecurve521rate	<Double>	Read-only	Rate (/s) counter for sslbetotecdhecurve521
sslbetotecdhecurve384	<Double>	Read-only	Number of back-end ECDHE 384 curve Key exchanges on the Citrix ADC.
sslbeecdhecurve384rate	<Double>	Read-only	Rate (/s) counter for sslbetotecdhecurve384

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetotecdhecurve256	<Double>	Read-only	Number of back-end ECDHE 256 curve Key exchanges on the Citrix ADC.
sslbeecdhecurve256rate	<Double>	Read-only	Rate (/s) counter for sslbetotecdhecurve256
sslbetotecdhecurve224	<Double>	Read-only	Number of back-end ECDHE 224 curve Key exchanges on the Citrix ADC.
sslbeecdhecurve224rate	<Double>	Read-only	Rate (/s) counter for sslbetotecdhecurve224
sslbetot40bitrc4ciphers	<Double>	Read-only	Number of back-end RC4 40-bit cipher encryptions on the Citrix ADC.
sslbe40bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot40bitrc4ciphers
sslbetot56bitrc4ciphers	<Double>	Read-only	Number of back-end RC4 56-bit cipher encryptions on the Citrix ADC.
sslbe56bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot56bitrc4ciphers
sslbetot64bitrc4ciphers	<Double>	Read-only	Number of back-end RC4 64-bit cipher encryptions on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbe64bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot64bitrc4ciphers
sslbetot128bitrc4ciphers	<Double>	Read-only	Number of back-end RC4 128-bit cipher encryptions on the Citrix ADC.
sslbe128bitrc4ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot128bitrc4ciphers
sslbetot40bitdesciphers	<Double>	Read-only	Number of back-end DES 40-bit cipher encryptions on the Citrix ADC.
sslbe40bitdesciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot40bitdesciphers
sslbetot56bitdesciphers	<Double>	Read-only	Number of back-end DES 56-bit cipher encryptions on the Citrix ADC.
sslbe56bitdesciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot56bitdesciphers
sslbetot168bit3desciphers	<Double>	Read-only	Number of back-end 3DES 168-bit cipher encryptions on the Citrix ADC.
sslbe168bit3desciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot168bit3desciphers

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotbkendcipheraes128	<Double>	Read-only	Back-end AES 128-bit cipher encryptions on the Citrix ADC.
sslbkendcipheraes128rate	<Double>	Read-only	Rate (/s) counter for ssltotbkendcipheraes128
ssltotbkendcipheraes256	<Double>	Read-only	Back-end AES 256-bit cipher encryptions on the Citrix ADC.
sslbkendcipheraes256rate	<Double>	Read-only	Rate (/s) counter for ssltotbkendcipheraes256
sslbetot40bitrc2ciphers	<Double>	Read-only	Number of back-end RC2 40-bit cipher encryptions on the Citrix ADC.
sslbe40bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot40bitrc2ciphers
sslbetot56bitrc2ciphers	<Double>	Read-only	Number of back-end RC2 56-bit cipher encryptions on the Citrix ADC.
sslbe56bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot56bitrc2ciphers
sslbetot128bitrc2ciphers	<Double>	Read-only	Number of back-end RC2 128-bit cipher encryptions on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbe128bitrc2ciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot128bitrc2ciphers
ssltotbkendcipheraesgcm128	<Double>	Read-only	Back-end AES-GCM 128-bit cipher encryptions on the Citrix ADC.
sslbkendcipheraesgcm128rate	<Double>	Read-only	Rate (/s) counter for ssltotbkendcipheraesgcm128
ssltotbkendcipheraesgcm256	<Double>	Read-only	Back-end AES-GCM 256-bit cipher encryptions on the Citrix ADC .
sslbkendcipheraesgcm256rate	<Double>	Read-only	Rate (/s) counter for ssltotbkendcipheraesgcm256
sslbetotnullciphers	<Double>	Read-only	Number of back-end null cipher encryptions on the Citrix ADC.
sslbenullciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetotnullciphers
sslbetotmd5mac	<Double>	Read-only	Number of back-end MD5 hashes on the Citrix ADC.
sslbemd5macrate	<Double>	Read-only	Rate (/s) counter for sslbetotmd5mac
sslbetotshamac	<Double>	Read-only	Number of back-end SHA hashes on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbeshamacrate	<Double>	Read-only	Rate (/s) counter for sslbetotshamac
sslbetotsha256mac	<Double>	Read-only	Number of back-end SHA256 hashes on the Citrix ADC.
sslbesha256macrate	<Double>	Read-only	Rate (/s) counter for sslbetotsha256mac
sslbetotsha384mac	<Double>	Read-only	Number of back-end SHA384 hashes on the Citrix ADC.
sslbesha384macrate	<Double>	Read-only	Rate (/s) counter for sslbetotsha384mac
sslbetotsslv3handshakes	<Double>	Read-only	Number of back-end SSLv3 handshakes on the Citrix ADC.
sslbesslv3handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetotsslv3handshakes
sslbetottlsv1handshakes	<Double>	Read-only	Number of back-end TLSv1 handshakes on the Citrix ADC.
sslbetlsv1handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv1handshakes
sslbetottlsv11handshakes	<Double>	Read-only	Number of back-end TLSv1.1 handshakes on the Citrix ADC.
sslbetlsv11handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv11handshakes

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetottlsv12handshakes	<Double>	Read-only	Number of back-end TLSv1.2 handshakes on the Citrix ADC.
sslbetlsv12handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv12handshakes
sslbetotdtlsv1handshakes	<Double>	Read-only	Number of back-end DTLSv1 handshakes on the Citrix ADC.
sslbedtlsv1handshakesrate	<Double>	Read-only	Rate (/s) counter for sslbetotdtlsv1handshakes
sslbetotsslv3clientauthentications	<Double>	Read-only	Number of back-end SSLv3 client authentications on the Citrix ADC.
sslbesslv3clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotsslv3clientauthentications
sslbetottlsv1clientauthentications	<Double>	Read-only	Number of back-end TLSv1 client authentications on the Citrix ADC.
sslbetlsv1clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv1clientauthentications
sslbetottlsv11clientauthentications	<Double>	Read-only	Number of back-end TLSv1.1 client authentications on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbetlsv11clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv11clientauthentications
sslbetottlsv12clientauthentications	<Double>	Read-only	Number of back-end TLSv1.2 client authentications on the Citrix ADC.
sslbetlsv12clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetottlsv12clientauthentications
sslbetotdtlsv1clientauthentications	<Double>	Read-only	Number of back-end DTLSv1 client authentications on the Citrix ADC.
sslbedtlsv1clientauthenticationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotdtlsv1clientauthentications
sslbetotrsaauthorizations	<Double>	Read-only	Number of back-end RSA authentications on the Citrix ADC.
sslbersaauthorizationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotrsaauthorizations
sslbetotdhauthorizations	<Double>	Read-only	Number of back-end DH authentications on the Citrix ADC.
sslbedhauthorizationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotdhauthorizations
sslbetotdssauthorizations	<Double>	Read-only	Number of back-end DSS authentications on the Citrix ADC.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslbedssauthorizationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotdssauthorizations
sslbetotecdsaauthorizations	<Double>	Read-only	Number of back-end ECDSA authentications on the Citrix ADC.
sslbeecdsaauthorizationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotecdsaauthorizations
sslbetotnullauthorizations	<Double>	Read-only	Number of back-end null authentications on the Citrix ADC.
sslbenullauthorizationsrate	<Double>	Read-only	Rate (/s) counter for sslbetotnullauthorizations
ssltotoffloadrsakeyexchanges	<Double>	Read-only	Number of RSA key exchanges offloaded to the cryptography card.
sslloffloadrsakeyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadrsakeyexchanges
ssltotoffloadsignrsa	<Double>	Read-only	Number of RSA sign operations offloaded to the cryptography card.
sslloffloadsignrsarate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadsignrsa
ssltotoffloaddhkeyexchanges	<Double>	Read-only	Number of DH key exchanges offloaded

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			to the cryptography card.
ssloffloaddhkeyexchangesrate	<Double>	Read-only	Rate (/s) counter for ssltotoffloaddhkeyexchanges
ssltotoffloadbulkrc4	<Double>	Read-only	Number of RC4 encryptions offloaded to the cryptography card.
ssloffloadbulkrc4rate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadbulkrc4
ssltotoffloadbulkdes	<Double>	Read-only	Number of DES encryptions offloaded to the cryptography card.
ssloffloadbulkdesrate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadbulkdes
ssltotoffloadbulkaes	<Double>	Read-only	Number of AES encryptions offloaded to the cryptography card.
ssloffloadbulkaesrate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadbulkaes
ssltotoffloadbulkaesgcm128	<Double>	Read-only	Number of AES-GCM 128-bit encryptions offloaded to the cryptography card.
ssloffloadbulkaesgcm128rate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadbulkaesgcm128

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotoffloadbulkaesgcm256	<Double>	Read-only	Number of AES-GCM 256-bit encryptions offloaded to the cryptography card.
sslloffloadbulkaesgcm256rate	<Double>	Read-only	Rate (/s) counter for ssltotoffloadbulkaesgcm256
ssltotenchw	<Double>	Read-only	Number of bytes encrypted in hardware.
sslenchwrate	<Double>	Read-only	Rate (/s) counter for ssltotenchw
ssltotencsw	<Double>	Read-only	Number of bytes encrypted in software.
sslencswrate	<Double>	Read-only	Rate (/s) counter for ssltotencsw
ssltotencfe	<Double>	Read-only	Number of bytes encrypted on the front-end.
sslencferate	<Double>	Read-only	Rate (/s) counter for ssltotencfe
ssltothwencfe	<Double>	Read-only	Number of bytes encrypted in hardware on the front-end.
sslhwencferate	<Double>	Read-only	Rate (/s) counter for ssltothwencfe
ssltotswencfe	<Double>	Read-only	Number of bytes encrypted in

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			software on the front-end.
sslswencferate	<Double>	Read-only	Rate (/s) counter for ssltotswencfe
ssltotencbe	<Double>	Read-only	Number of bytes encrypted on the back-end.
sslencberate	<Double>	Read-only	Rate (/s) counter for ssltotencbe
ssltothwencbe	<Double>	Read-only	Number of bytes encrypted in hardware on the back-end.
sslhwencberate	<Double>	Read-only	Rate (/s) counter for ssltothwencbe
ssltotswencbe	<Double>	Read-only	Number of bytes encrypted in software on the back-end.
sslswencberate	<Double>	Read-only	Rate (/s) counter for ssltotswencbe
ssltotdechw	<Double>	Read-only	Number of bytes decrypted in hardware.
ssldechwrate	<Double>	Read-only	Rate (/s) counter for ssltotdechw
ssltotdecsw	<Double>	Read-only	Number of bytes decrypted in software.
ssldecswrate	<Double>	Read-only	Rate (/s) counter for ssltotdecsw

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
ssltotdecfe	<Double>	Read-only	Number of bytes decrypted on the front-end.
ssldecferate	<Double>	Read-only	Rate (/s) counter for ssltotdecfe
ssltothwdecfe	<Double>	Read-only	Number of bytes decrypted in hardware on the front-end.
sslhwdecferate	<Double>	Read-only	Rate (/s) counter for ssltothwdecfe
ssltotswdecfe	<Double>	Read-only	Number of bytes decrypted in software on the front-end.
sslswdecferate	<Double>	Read-only	Rate (/s) counter for ssltotswdecfe
ssltotdecbe	<Double>	Read-only	Number of bytes decrypted on the back-end.
ssldecberate	<Double>	Read-only	Rate (/s) counter for ssltotdecbe
ssltothwdecbe	<Double>	Read-only	Number of bytes decrypted in hardware on the back-end.
sslhwdecberate	<Double>	Read-only	Rate (/s) counter for ssltothwdecbe
ssltotswdecbe	<Double>	Read-only	Number of bytes decrypted in

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			software on the back-end
sslswdecberate	<Double>	Read-only	Rate (/s) counter for ssltotswdecbe
sslcursslinfospcbinusecount	<Double>	Read-only	Number of SPCB in use.
sslcursslinfospcbinusecountrate	<Double>	Read-only	Rate (/s) counter for sslcursslinfospcbinusecount
sslcursessions	<Double>	Read-only	Number of active SSL sessions on the Citrix ADC.
sslcursessionsrate	<Double>	Read-only	Rate (/s) counter for sslcursessions
sslcurqsize	<Double>	Read-only	Current queue size
sslcurqsizerate	<Double>	Read-only	Rate (/s) counter for sslcurqsize
sslcursslinfonscardinqcount	<Double>	Read-only	Number of current SSL card InQ count.
sslcursslinfonscardinqcountrate	<Double>	Read-only	Rate (/s) counter for sslcursslinfonscardinqcount
sslcursslinfocardinblkq	<Double>	Read-only	Number of current SSL card In BulkQ count.
sslcursslinfocardinblkqrate	<Double>	Read-only	Rate (/s) counter for sslcursslinfocardinblkq

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslcursslinfocardinkeyq	<Double>	Read-only	Number of current SSL card In KeyQ count.
sslcursslinfocardinkeyqrate	<Double>	Read-only	Rate (/s) counter for sslcursslinfocardinkeyq
sslbemaxmultiplexedsessions	<Double>	Read-only	Number of back-end SSL sessions reused on the Citrix ADC.
sslbemaxmultiplexedsessionsrate	<Double>	Read-only	Rate (/s) counter for sslbemaxmultiplexedsessions
ssltot128bitideaciphers	<Double>	Read-only	Number of IDEA 128-bit cipher encryptions on the Citrix ADC.
ssl128bitideaciphersrate	<Double>	Read-only	Rate (/s) counter for ssltot128bitideaciphers
sslbetot128bitideaciphers	<Double>	Read-only	Number of back-end IDEA 128-bit cipher encryptions on the Citrix ADC.
sslbe128bitideaciphersrate	<Double>	Read-only	Rate (/s) counter for sslbetot128bitideaciphers

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/ssl

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/ssl?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get ssl resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

sslvserver

Statistics for SSL virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
vservername	<String>	Read-write	Name of the SSL virtual server for which to show detailed statistics. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
vslbhealth	<Double>	Read-only	Health of the vserver. This gives percentage of UP services bound to this vserver.
primaryipaddress	<String>	Read-only	IP address of the vserver
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7),

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
actsvcs	<Double>	Read-only	number of ACTIVE services bound to a vserver
ssltotclientauthsuccess	<Double>	Read-only	Number of successful client authentication on this vserver
sslclientauthsuccessrate	<Double>	Read-only	Rate (/s) counter for ssltotclientauthsuccess
ssltotclientauthfailure	<Double>	Read-only	Number of failure client authentication on this vserver
sslclientauthfailurerate	<Double>	Read-only	Rate (/s) counter for ssltotclientauthfailure
sslctxtotencbytes	<Double>	Read-only	Number of encrypted bytes per SSL vserver
sslctxencbytesrate	<Double>	Read-only	Rate (/s) counter for sslctxtotencbytes
sslctxtotdecbytes	<Double>	Read-only	Number of decrypted bytes per SSL vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
sslctxdecbytesrate	<Double>	Read-only	Rate (/s) counter for sslctxtotdecbytes
sslctxtothwencbytes	<Double>	Read-only	Number of hardware encrypted bytes per SSL vserver
sslctxhwencbytesrate	<Double>	Read-only	Rate (/s) counter for sslctxtothwencbytes
sslctxtothwdec_bytes	<Double>	Read-only	Number of hw decrypted bytes per SSL vserver
sslctxhwdec_bytesrate	<Double>	Read-only	Rate (/s) counter for sslctxtothwdec_bytes
sslctxtotsessionnew	<Double>	Read-only	Number of new sessions created
sslctxsessionnewrate	<Double>	Read-only	Rate (/s) counter for sslctxtotsessionnew
sslctxtotsessionhits	<Double>	Read-only	Number of session hits
sslctxsessionhitsrate	<Double>	Read-only	Rate (/s) counter for sslctxtotsessionhits

Operations

(click to see Properties)

GET (ALL)| GET

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/sslvserver

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/sslvserver?
args=vservername:<String_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double

Use this query-parameter to get sslvserver resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```

SSL VPN

Virtual Private Network statistics.

NAME	DESCRIPTION
vpn	Statistics for vpn.
vpnurlpolicy	Statistics for VPN url policy resource.
vpnvserver	Statistics for VPN virtual server resource.

vpn

Statistics for vpn.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
indexhtmlhit	<Double>	Read-only	Number of requests for VPN login page.
indexhtmlnoserved	<Double>	Read-only	Number of failures to display VPN login page.
cfghtmlserved	<Double>	Read-only	Number of client configuration requests received by VPN server.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cfghtmlservedrate	<Double>	Read-only	Rate (/s) counter for cfghtmlserved
dnsreqhit	<Double>	Read-only	Number of DNS queries resolved by VPN server.
dnsreqhitrate	<Double>	Read-only	Rate (/s) counter for dnsreqhit
winsrequesthit	<Double>	Read-only	Number of WINS queries resolved by VPN server.
winsrequesthitrate	<Double>	Read-only	Rate (/s) counter for winsrequesthit
csrequesthit	<Double>	Read-only	Number of SSL VPN tunnels formed between VPN server and client.
csrequesthitrate	<Double>	Read-only	Rate (/s) counter for csrequesthit
csnonhttpprobehit	<Double>	Read-only	Number of probes from VPN to back-end non-HTTP servers that have been accessed by the VPN client.
csnonhttpprobehitrate	<Double>	Read-only	Rate (/s) counter for csnonhttpprobehit
cshttpprobehit	<Double>	Read-only	Number of probes from VPN to back-end HTTP servers that have been accessed by the VPN client.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
cshttpprobehitrate	<Double>	Read-only	Rate (/s) counter for cshttpprobehit
totalcsconnsucc	<Double>	Read-only	Number of successful probes to all back-end servers.
csconnsuccrate	<Double>	Read-only	Rate (/s) counter for totalcsconnsucc
totalfsrequest	<Double>	Read-only	Number of file system requests received by VPN server.
fsrequestrate	<Double>	Read-only	Rate (/s) counter for totalfsrequest
vpnlicensefail	<Double>	Read-only	Number of users not able to login because of license unavailability.
iipdisabledmipused	<Double>	Read-only	Number of times SNIP is used as IIP is disabled.
iipdisabledmipusedrate	<Double>	Read-only	Rate (/s) counter for iipdisabledmipused
iipfailedmipused	<Double>	Read-only	Number of times SNIP is used as IIP assignment failed.
iipfailedmipusedrate	<Double>	Read-only	Rate (/s) counter for iipfailedmipused
iipspillovermipused	<Double>	Read-only	Number of times SNIP is used on IIP Spillover.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
iipspillovermipusedrate	<Double>	Read-only	Rate (/s) counter for iipspillovermipused
iipdisabledmipdisabled	<Double>	Read-only	Both IIP and SNIP is disabled.
iipdisabledmipdisabledrate	<Double>	Read-only	Rate (/s) counter for iipdisabledmipdisabled
iipfailedmipdisabled	<Double>	Read-only	Number of times IIP assignment failed and SNIP is disabled.
iipfailedmipdisabledrate	<Double>	Read-only	Rate (/s) counter for iipfailedmipdisabled
socksmethreqrcvd	<Double>	Read-only	Number of received SOCKS method request.
socksmethreqrcvdrate	<Double>	Read-only	Rate (/s) counter for socksmethreqrcvd
socksmethreqsent	<Double>	Read-only	Number of sent SOCKS method request.
socksmethreqsentrate	<Double>	Read-only	Rate (/s) counter for socksmethreqsent
socksmethresprcvd	<Double>	Read-only	Number of received SOCKS method response.
socksmethresprcvdrate	<Double>	Read-only	Rate (/s) counter for socksmethresprcvd

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
socksmethrespsent	<Double>	Read-only	Number of sent SOCKS method response.
socksmethrespsentrate	<Double>	Read-only	Rate (/s) counter for socksmethrespsent
socksconnreqrcvd	<Double>	Read-only	Number of received SOCKS connect request.
socksconnreqrcvdrate	<Double>	Read-only	Rate (/s) counter for socksconnreqrcvd
socksconnreqsent	<Double>	Read-only	Number of sent SOCKS connect request.
socksconnreqsentrate	<Double>	Read-only	Rate (/s) counter for socksconnreqsent
socksconnresprcvd	<Double>	Read-only	Number of received SOCKS connect response.
socksconnresprcvdrate	<Double>	Read-only	Rate (/s) counter for socksconnresprcvd
socksconnrespsent	<Double>	Read-only	Number of sent SOCKS connect response.
socksconnrespsentrate	<Double>	Read-only	Rate (/s) counter for socksconnrespsent
socksservererror	<Double>	Read-only	Number of SOCKS server error.
socksservererrorrate	<Double>	Read-only	Rate (/s) counter for socksservererror

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
socksclienterror	<Double>	Read-only	Number of SOCKS client error.
socksclienterrorrate	<Double>	Read-only	Rate (/s) counter for socksclienterror
staconnsuccess	<Double>	Read-only	Number of STA connection success.
staconnsuccessrate	<Double>	Read-only	Rate (/s) counter for staconnsuccess
staconnfailure	<Double>	Read-only	Number of STA connection failure.
staconnfailurerate	<Double>	Read-only	Rate (/s) counter for staconnfailure
cpsconnsuccess	<Double>	Read-only	Number of CPS connection success.
cpsconnsuccessrate	<Double>	Read-only	Rate (/s) counter for cpsconnsuccess
cpsconnfailure	<Double>	Read-only	Number of CPS connection failure.
cpsconnfailurerate	<Double>	Read-only	Rate (/s) counter for cpsconnfailure
starequestsent	<Double>	Read-only	Number of STA request sent.
starequestsentrate	<Double>	Read-only	Rate (/s) counter for starequestsent
staresponserecvd	<Double>	Read-only	Number of STA response received.
staresponserecvdrate	<Double>	Read-only	Rate (/s) counter for staresponserecvd

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
icalicensefailure	<Double>	Read-only	Number of ICA license failure.
icalicensefailurerate	<Double>	Read-only	Rate (/s) counter for icalicensefailure
stamonsent	<Double>	Read-only	Number of STA monitor requests sent.
stamonsentrate	<Double>	Read-only	Rate (/s) counter for stamonsent
stamonrcvd	<Double>	Read-only	Number of STA monitor responses recieved.
stamonrcvdrate	<Double>	Read-only	Rate (/s) counter for stamonrcvd
stamonsucc	<Double>	Read-only	Number of STA monitor successful responses.
stamonsuccrate	<Double>	Read-only	Rate (/s) counter for stamonsucc
stamonfail	<Double>	Read-only	Number of STA monitor failed responses.
stamonfailrate	<Double>	Read-only	Rate (/s) counter for stamonfail
csgptktvalidatenotstarted	<Double>	Read-only	Total number of STA server lookup failures for auth-id in primary ticket

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
csgptktvalidatenotstartedrate	<Double>	Read-only	Rate (/s) counter for csgptktvalidatenotstarted
csgrtktvalidatenotstarted	<Double>	Read-only	Total number of STA server lookup failures for auth-id in redundant ticket
csgrtktvalidatenotstartedrate	<Double>	Read-only	Rate (/s) counter for csgrtktvalidatenotstarted

Operations

(click to see Properties)

GET (ALL)

Some options that you can use for each operations:

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

Note: In such cases, make sure that the request header DOES not include the following:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:` *

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/vpn

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/vpn?
args=detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,logfile:<String_value

Use this query-parameter to get vpn resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

vpnvserver

Statistics for VPN virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the virtual server for which to show detailed statistics. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
primaryipaddress	<String>	Read-only	The IP address on which the service is running.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
primaryport	<Integer>	Read-only	The port on which the service is running.
type	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4), TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes

Stream

Stream statistics.

NAME	DESCRIPTION
streamidentifier	Statistics for identifier resource.

streamidentifier

Statistics for identifier resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the stream identifier. Minimum length = 1
pattern	<String[]>	Read-write	Values on which grouping is performed are displayed in the output as row titles. If grouping is performed on two or more fields, their values are separated by a question mark in the row title. For example, consider a selector that contains the expressions HTTP.REQ.URL and CLIENT.IP.SRC (in that order), on an appliance that has accumulated

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			records of a number of requests for two URLs, example.com/page1.html and example.com/page2.html, from two client IP addresses, 192.0.2.10 and 192.0.2.11. With a pattern of ? ?, the appliance performs grouping on both fields and displays statistics for the following: * Requests for example.com/abc.html from 192.0.2.10, with a row title of example.com/abc.html? 192.0.2.10. * Requests for example.com/abc.html from 192.0.2.11, with a row title of example.com/abc.html? 192.0.2.11.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			* Requests for example.com/def.html from 192.0.2.10, with a row title of example.com/def.html? 192.0.2.10. * Requests for example.com/def.html from 192.0.2.11, with a row title of example.com/def.html? 192.0.2.11. With a pattern of * ?, the appliance performs grouping on only the client IP address values and displays statistics for the following requests: * All requests from 192.0.2.10, with the IP address as the row title. * All requests from 192.0.2.11, with the IP address as the row title.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			With a pattern of ? *, the appliance performs grouping on only the URL values and displays statistics for the following requests: * All requests for example.com/abc.html, with the URL as the row title. * All requests for example.com/def.html, with the URL as the row title. With a pattern of * *, the appliance displays one set of collective statistics for all the requests received, with no row title. With a pattern of example.com/abc.html ?, the appliance displays statistics for requests for example.com/abc.html from each unique client IP address.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			With a pattern of * 192.0.2.11, the appliance displays statistics for all requests from 192.0.2.11.
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
sortby	<String>	Read-write	use this argument to sort by specific key. Possible values =
sortorder	<String>	Read-write	use this argument to specify sort order. Default value: SORT_DESCENDING Possible values = ascending, descending
streamobjreq	<Double>	Read-only	Total number of Stream Requests recieved.
streamobjbandw	<Double>	Read-only	Total Bandwidth consumed.
streamobjresptime	<Double>	Read-only	Average response time of the stream session.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
streamobjconn	<Double>	Read-only	Current connections on the stream session.
streamobjbreachcnt	<Double>	Read-only	Total Breaching Transactions in configured interval.
streamobjpktcredits	<Double>	Read-only	Calculated Packet credits on current connection.
streamobjpktspersecond	<Double>	Read-only	Total packets recieved in configured interval.
streamobjdroppedconns	<Double>	Read-only	Total connections dropped.

Sure Connect

SureConnect statistics. SureConnect allows the system to deliver alternate content to clients when the system is under heavy load for the original URL. The original content will be served to the client, automatically, after an estimated delay period.

NAME	DESCRIPTION
sc	Statistics for sc.
scpolicy	Statistics for SureConnect policy resource.

sc

Statistics for sc.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
sctotcondtriggered	<Double>	Read-only	Number of times that SureConnect conditions were triggered.
sccondtriggeredrate	<Double>	Read-only	Rate (/s) counter for sctotcondtriggered
scpolicyurlhits	<Double>	Read-only	Total number of incoming requests that matched configured sureconnect policies.
scpolicyurlhitsrate	<Double>	Read-only	Rate (/s) counter for scpolicyurlhits
scpopups	<Double>	Read-only	Total number of in-memory java script served which throws the pop-up window.
scpopupsrate	<Double>	Read-only	Rate (/s) counter for scpopups
sctotreissuedrequests	<Double>	Read-only	Total number of reissued SureConnect requests.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
screissuedrequestsrate	<Double>	Read-only	Rate (/s) counter for sctotreissuedrequests
scsessionreqs	<Double>	Read-only	Total number of requests that were handled in a single SureConnect session.
scsessionreqsrate	<Double>	Read-only	Rate (/s) counter for scsessionreqs
scaltconturls	<Double>	Read-only	Total number of alternate content served which throws the pop-up window.
scaltconturlsrate	<Double>	Read-only	Rate (/s) counter for scaltconturls
scpostreqs	<Double>	Read-only	Total number of HTTP POST requests that triggered SureConnect feature.
scpostreqsrate	<Double>	Read-only	Rate (/s) counter for scpostreqs
scresetstats	<Double>	Read-only	Toal number of times that SureConnect statistics were reset.
scresetstatsrate	<Double>	Read-only	Rate (/s) counter for scresetstats
scunsupbrow	<Double>	Read-only	Total number of requests that came

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			from all unsupported browsers.
scunsupbrowrate	<Double>	Read-only	Rate (/s) counter for scunsupbrow
scfaultycookies	<Double>	Read-only	Total number of corrupted SureConnect cookies.
scfaultycookiesrate	<Double>	Read-only	Rate (/s) counter for scfaultycookies

scpolicy

Statistics for SureConnect policy resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the policy about which to display statistics. To display statistics about all SureConnect policies, do not set this parameter. Minimum length = 1 Maximum length = 31
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
avgservertransaction time	<Double>	Read-only	Average server transaction time in seconds for this SureConnect Policy.
avgservertransaction timerate	<Double>	Read-only	Rate (/s) counter for avgservertransaction time
scaverageclientttlb	<Double>	Read-only	Average value of the client Time-To-Last-Byte in seconds for this SureConnect policy.
scaverageclientttlbrate	<Double>	Read-only	Rate (/s) counter for scaverageclientttlb

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
scphysicalserviceip	<String>	Read-only	IP address of the service in dotted notation for which these statistics are maintained.
scphysicalservicepor t	<Integer>	Read-only	Port of the service for which these statistics are maintained.
sccurrentclientconne ctions	<Double>	Read-only	Number of clients currently allowed a server connection by this SureConnect policy.
sccurrentclientconne ctionsrate	<Double>	Read-only	Rate (/s) counter for sccurrentclientconne ctions
sccurrentwaitingclien ts	<Double>	Read-only	Current number of SureConnect priority clients that are waiting for a server connection.
sccurrentwaitingclien tsrate	<Double>	Read-only	Rate (/s) counter for sccurrentwaitingclien ts
totopenconn	<Double>	Read-only	Current number of open connections to the servers matching this policy.
openconnrate	<Double>	Read-only	Rate (/s) counter for totopenconn
sccurrentwaitingtime	<Double>	Read-only	Value of the currently estimated waiting

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			time in seconds for the configured URL.
sccurrentwaitingtimerate	<Double>	Read-only	Rate (/s) counter for sccurrentwaitingtime
sctotalclientconnections	<Double>	Read-only	Total number of clients that were allowed a server connection by this SureConnect policy.
scclientconnectionsrate	<Double>	Read-only	Rate (/s) counter for sctotalclientconnections
sctotalserverconnections	<Double>	Read-only	Total number of server connections that were established through this SureConnect policy.
scserverconnectionsrate	<Double>	Read-only	Rate (/s) counter for sctotalserverconnections
totclienttransaction	<Double>	Read-only	Total number of client transactions processed by this SureConnect policy.
clienttransactionrate	<Double>	Read-only	Rate (/s) counter for totclienttransaction
sctotalservertransactions	<Double>	Read-only	Number of 200 OK responses received from the web server by this SureConnect policy.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
scservertransactionsrate	<Double>	Read-only	Rate (/s) counter for sctotalservertransactions
sctotalrequestsreceived	<Double>	Read-only	Total number of requests received by this SureConnect policy.
screquestsreceivedrate	<Double>	Read-only	Rate (/s) counter for sctotalrequestsreceived
sctotalrequestbytes	<Double>	Read-only	Total number of request bytes received by this SureConnect policy.
screquestbytesrate	<Double>	Read-only	Rate (/s) counter for sctotalrequestbytes
sctotalresponsesreceived	<Double>	Read-only	Total number of server responses received by this SureConnect policy.
scresponsesreceivedrate	<Double>	Read-only	Rate (/s) counter for sctotalresponsesreceived
sctotalresponsebytes	<Double>	Read-only	Total number of response bytes received by this SureConnect policy.
scresponsebytesrate	<Double>	Read-only	Rate (/s) counter for sctotalresponsebytes

Operations

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
voltagev12n	<Double>	Read-only	Power supply -12V output. Acceptable range is -13.20 through -10.80 volts. 9800 and 9960 platforms display standard value of -12.0V.
voltagev5n	<Double>	Read-only	Power supply -5V output. Acceptable range is -5.50 through -4.50 volts. 9800 and 9960 platforms display standard value of -5.0V.
cpuusage	<Double>	Read-only	CPU utilization percentage.
rescpuusage	<Double>	Read-only	Shows average CPU utilization percentage if more than 1 CPU is present.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
slavecpuusage	<Double>	Read-only	CPU 1 (currently the slave CPU) utilization, as percentage of capacity. Not applicable for a single-CPU system.
mastercpuusage	<Double>	Read-only	CPU 0 (currently the master CPU) utilization, as percentage of capacity.
auxvolt7	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 7.
auxvolt6	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 6.
auxvolt5	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 5.
auxvolt4	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 4.
auxvolt3	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 3.
auxvolt2	<Double>	Read-only	Voltage of a device connected to health

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			monitoring chip through pin 2.
auxvolt1	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 1.
auxvolt0	<Double>	Read-only	Voltage of a device connected to health monitoring chip through pin 0.
voltagevsen2	<Double>	Read-only	Voltage Sensor 2 Input. Currently only 13k Platforms will have valid value for this counter and for older platforms this will be 0.
voltagev5sb	<Double>	Read-only	Power Supply 5V Standby Voltage. Currently only 13k Platforms will have valid value for this counter and for older platforms this will be 0.
voltagevtt	<Double>	Read-only	Intel CPU Vtt power. Currently only 13k Platforms will have valid value for this counter and for older platforms this will be 0.
voltagevbat	<Double>	Read-only	Onboard battery power supply output. 9800 and 9950 platforms display

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			standard value of 5.0V.
voltagev12p	<Double>	Read-only	Power supply +12V output. Acceptable range is 10.80 through 13.20 volts.
voltagev5p	<Double>	Read-only	Power supply +5V output. Acceptable range is 4.50 through 5.50 volts.
voltagev33stby	<Double>	Read-only	Standby power supply +3.3V output. Acceptable range is 2.970 through 3.630 volts. 9800 and 9960 platforms display standard value of 3.3V. You can configure Standby 3.3V Supply Voltage by using the Set snmp alarm VOLTAGE-LOW command to set the lower limit and the Set snmp alarm VOLTAGE-HIGH command to set the upper limit.
voltagev33main	<Double>	Read-only	Main power supply +3.3V output. Acceptable range is 2.970 through 3.630 volts. This is a critical counter. You can configure Main 3.3V Supply Voltage, by

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			using the Set snmp alarm VOLTAGE-LOW command to set the lower limit and the Set snmp alarm VOLTAGE-HIGH command to set the upper limit.
voltagevcc1	<Double>	Read-only	CPU core 1 voltage. Acceptable range is 1.080 through 1.650 volts. If CPU 1 is not connected to the health monitoring chip, display shows voltage of CPU 0.
voltagevcc0	<Double>	Read-only	CPU core 0 voltage. Acceptable range is 1.080 through 1.650 volts.
numcpus	<Double>	Read-only	The number of CPUs on the Citrix ADC.
memusagepcnt	<Double>	Read-only	Percentage of memory utilization on Citrix ADC.
memuseinmb	<Double>	Read-only	Main memory currently in use, in megabytes.
addimgmtcpuusagepcnt	<Double>	Read-only	Additonal Management CPU utilization percentage.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
mgmtcpu0usagepcnt	<Double>	Read-only	Management CPU-0 utilization percentage.
mgmtcpuusagepcnt	<Double>	Read-only	Average Management CPU utilization percentage.
pktcpuusagepcnt	<Double>	Read-only	Average CPU utilization percentage for all packet engines excluding management PE.
cpuusagepcnt	<Double>	Read-only	CPU utilization percentage.
rescpuusagepcnt	<Double>	Read-only	Average CPU utilization percentage. Not applicable for a single-CPU system.
starttimelocal	<String>	Read-only	Time (in local timezone format) when the Citrix ADC was last started.
starttime	<String>	Read-only	Time when the Citrix ADC was last started.
disk0perusage	<Double>	Read-only	Used space in /flash partition of the disk, as a percentage. This is a critical counter. You can configure /flash Used (%) by using the Set snmp alarm DISK-

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			USAGE-HIGH command.
disk1perusage	<Double>	Read-only	Used space in /var partition of the disk, as a percentage. This is a critical counter. You can configure /var Used (%) by using the Set snmp alarm DISK-USAGE-HIGH command.
cpufan0speed	<Double>	Read-only	CPU Fan 0 speed. Acceptable range is 3000 through 6000 RPM. This is a critical counter. You can configure CPU Fan 0 Speed by using the Set snmp alarm FAN-SPEED-LOW command to set the lower limit.
cpufan1speed	<Double>	Read-only	CPU Fan 1 speed. Acceptable range is 3000 through 6000 RPM. 7000 platform displays speed of CPU fan 0. This is a critical counter. You can configure CPU Fan 1 Speed by using the Set snmp alarm FAN-SPEED-LOW command to set the lower limit.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
systemfanspeed	<Double>	Read-only	System fan speed. Acceptable range is 3000 through 6000 RPM. This is a critical counter. You can configure System Fan Speed by using the Set snmp alarm FAN-SPEED-LOW command to set the lower limit.
fan0speed	<Double>	Read-only	System fan 1 speed. For new platforms associated pin is connected to CPU supporting fans. For platforms in which it is not connected, it will point to System Fan.
fanspeed	<Double>	Read-only	System fan 2 speed. For new platforms associated pin is connected to CPU supporting fans. For platforms in which it is not connected, it will point to System Fan
cpu0temp	<Double>	Read-only	CPU 0 temperature. 9800 and 9960 platforms display internal chip temperature. This is a critical counter. You can configure CPU 0 Temperature by

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			using the Set snmp alarm TEMPERATURE-HIGH command to set the upper limit.
cpu1temp	<Double>	Read-only	CPU 1 temperature. 9800 and 9960 platforms display internal chip temperature. 7000, 9010 and 10010 platforms display CPU 0 temperature. This is a critical counter. You can configure CPU 1 Temperature by using the Set snmp alarm TEMPERATURE-HIGH command to set the upper limit.
internaltemp	<Double>	Read-only	Internal temperature of health monitoring chip. This is a critical counter. You can configure Internal Temperature by using the Set snmp alarm TEMPERATURE-HIGH command to set the upper limit.
powersupply1status	<String>	Read-only	Power supply 1 failure status.
powersupply2status	<String>	Read-only	Power supply 2 failure status.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
powersupply3status	<String>	Read-only	Power supply 3 failure status.
powersupply4status	<String>	Read-only	Power supply 4 failure status.
disk0size	<Double>	Read-only	Size of /flash partition of the hard disk.
disk0used	<Double>	Read-only	Used space in /flash partition of the hard disk.
disk0avail	<Double>	Read-only	Available space in /flash partition of the hard disk.
disk1size	<Double>	Read-only	Size of /var partition of the hard disk.
disk1used	<Double>	Read-only	Used space in /var partition of the hard disk.
disk1avail	<Double>	Read-only	Available space in /var partition of the hard disk.
fan2speed	<Double>	Read-only	Speed of Fan 0 if associated pin is connected to health monitoring chip.
fan3speed	<Double>	Read-only	Speed of Fan 1 if associated pin is connected to health monitoring chip.
fan4speed	<Double>	Read-only	Speed of Fan 2 if associated pin is

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			connected to health monitoring chip.
fan5speed	<Double>	Read-only	Speed of Fan 3 if associated pin is connected to health monitoring chip.
auxtemp0	<Double>	Read-only	Temperature of a device connected to health monitoring chip through pin 0.
auxtemp1	<Double>	Read-only	Temperature of a device connected to health monitoring chip through pin 1.
auxtemp2	<Double>	Read-only	Temperature of a device connected to health monitoring chip through pin 2.
auxtemp3	<Double>	Read-only	Temperature of a device connected to health monitoring chip through pin 3.
timesincestart	<String>	Read-only	Seconds since the Citrix ADC started.
memsizemb	<Double>	Read-only	Total amount of system memory, in megabytes.

Operations

- **Getting warnings in response:**NITRO allows you to get warnings in an operation by specifying the "warning" query parameter as "yes". For example, to get warnings while connecting to the Citrix ADC appliance, the URL is as follows:

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".

- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.

get (all)

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/systemcpu

Query-parameters:

args

http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/systemcpu?
args=id:<Double_value>,detail:<Boolean_value>,fullvalues:<Boolean_value>,ntimes:<Double_value>,lo

Use this query-parameter to get systemcpu resources based on additional properties.

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systemcpu": [ {

"id":<Double_value>,

"percpuuse":<Double_value>

}]}
```

get

URL:http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/stat/systemcpu/id_value><Double>

HTTP Method:GET

Request Headers:

Cookie:NITRO_AUTH_TOKEN=<tokenvalue> Accept:application/json

Response:

HTTP Status Code on Success: 200 OK HTTP Status Code on Failure: 4xx <string> (for general HTTP errors) or 5xx <string> (for Citrix ADC specific errors). The response payload provides details of the error**Response Headers:**

Content-Type:application/json

Response Payload:

```
{ "systemcpu": [ {

"id":<Double_value>,

"percpuuse":<Double_value>

}]}
```

systemmemory

Statistics for Global system memory stats resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
cacmemmaxmemlimitpcnt	<Double>	Read-only	Integrated Cache memory insue percent.
cacmemmaxmemlimit	<Double>	Read-only	Integrated Cache memory insue, in megabytes.
shmemerrallocfailed	<Double>	Read-only	Total shared memory allocation failed.
shmemallocpcnt	<Double>	Read-only	Shared memory insue percent.
shmemallocinmb	<Double>	Read-only	Shared memory insue, in megabytes.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
shmemtotinmb	<Double>	Read-only	Total shared memory allowed to allocate, in megabytes.
memtotallocfailed	<Double>	Read-only	Total system memory allocation failed.
memtotfree	<Double>	Read-only	Total Free PE Memory in the System.
memusagepcnt	<Double>	Read-only	Percentage of memory utilization on Citrix ADC.
memtotuseinmb	<Double>	Read-only	Total Citrix ADC Memory in use, in megabytes.
memtotallocpcnt	<Double>	Read-only	Currently allocated memory in percent.
memtotallocmb	<Double>	Read-only	Currently allocated memory, in megabytes.
memtotinmb	<Double>	Read-only	Total memory available (grabbed) for use by packet engine (PE), in megabytes.
memtotavail	<Double>	Read-only	Total system memory available for PE to grab from the system.
cacmemmaxsyslimitmb	<Double>	Read-only	Integrated Cache memory, in megabytes.

User

User protocol statistics.

NAME	DESCRIPTION
uservserver	Statistics for virtual server resource.

uservserver

Statistics for virtual server resource.

Properties

(click to see Operations)

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
name	<String>	Read-write	Name of the user defined virtual server. If no name is provided, statistical data of all configured user defined virtual servers is displayed. Minimum length = 1
clearstats	<String>	Read-write	Clear the statsistics / counters. Possible values = basic, full
sortby	<String>	Read-write	use this argument to sort by specific key. Possible values =
sortorder	<String>	Read-write	use this argument to specify sort order.

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			Default value: SORT_DESCENDING Possible values = ascending, descending
establishedconn	<Double>	Read-only	Number of client connections in ESTABLISHED state.
inactsvcs	<Double>	Read-only	number of INACTIVE services bound to a vserver
vslbhealth	<Double>	Read-only	Health of the vserver. This gives percentage of UP services bound to this vserver.
primaryipaddress	<String>	Read-only	IP address of the vserver
primaryport	<Integer>	Read-only	The port on which the service is running.
protocolname	<String>	Read-only	Protocol associated with the vserver
state	<String>	Read-only	Current state of the server. There are seven possible values: UP(7), DOWN(1), UNKNOWN(2), BUSY(3), OFS(Out of Service)(4),

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			TROFS(Transition Out of Service)(5), TROFS_DOWN(Down When going Out of Service)(8)
actsvcs	<Double>	Read-only	number of ACTIVE services bound to a vserver
tothits	<Double>	Read-only	Total vserver hits
hitsrate	<Double>	Read-only	Rate (/s) counter for tothits
totalrequests	<Double>	Read-only	Total number of requests received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
requestsrate	<Double>	Read-only	Rate (/s) counter for totalrequests
totalresponses	<Double>	Read-only	Number of responses received on this service or virtual server. (This applies to HTTP/SSL services and servers.)
responsesrate	<Double>	Read-only	Rate (/s) counter for totalresponses
totalrequestbytes	<Double>	Read-only	Total number of request bytes received on this

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
			service or virtual server.
requestbytesrate	<Double>	Read-only	Rate (/s) counter for totalrequestbytes
totalresponsebytes	<Double>	Read-only	Number of response bytes received by this service or virtual server.
responsebytesrate	<Double>	Read-only	Rate (/s) counter for totalresponsebytes
totalpktsrecvd	<Double>	Read-only	Total number of packets received by this service or virtual server.
pktsrecvdrate	<Double>	Read-only	Rate (/s) counter for totalpktsrecvd
totalpktssent	<Double>	Read-only	Total number of packets sent.
pktssentrate	<Double>	Read-only	Rate (/s) counter for totalpktssent
curclntconnections	<Double>	Read-only	Number of current client connections.
cursrvrconnections	<Double>	Read-only	Number of current connections to the actual servers behind the virtual server.
invalidrequestrespon se	<Double>	Read-only	Number invalid requests/responses on this vserver

NAME	DATA TYPE	PERMISSIONS	DESCRIPTION
invalidrequestrespon sedropped	<Double>	Read-only	Number invalid requests/responses dropped on this vserver

Operations

  http://<Citrix-ADC-IP-address(NSIP)>/nitro/v1/config/login?warning=yes

  If any, the warnings are displayed in the response payload with the HTTP code "209 X-NITRO-WARNING".
- **Authenticated access for individual NITRO operations:**NITRO allows you to logon to the Citrix ADC appliance to perform individual operations. You can use this option instead of creating a NITRO session (using the login object) and then using that session to perform all operations,

  To do this, you must specify the username and password in the request header of the NITRO request as follows:

  X-NITRO-USER:<username>

  X-NITRO-PASS:<password>

  Note: In such cases, make sure that the request header DOES not include the following:

  Cookie:NITRO_AUTH_TOKEN=<tokenvalue>

`*Note:`*

Mandatory parameters are marked in redand placeholder content is marked in <green>.
